FILE PROGRESS SUMMARY

APPLICANT: Fish & Game - Hagerman WATER RIGHT NO.

INIT.	DATE	COMMENT
ABW	5/17/99	Joe Chapman wanted to calibrate his flow on troughs (through the raceways) that he is using the broad crested weir equation for. Didn't know if Fuji would work on pipe without scraping off paint & deposits. Tried one raceway (#15) & my 10 min average was 348.6 & he calculated 348.5 gpm.
		Come back tomorrow & do different flows for him. He is treating fish with Iodine & parts per million of iodine are critical.
ABW	5/18/99	Did the raceways he wanted to do. 2 raceways if even with the valves wide open, could only produce ≈ 320 gpm.
