E. NARRATIVE/REMARKS/COMMENTS

Narrative: Description (As operating at time of measurement. Indicate pressure, number of sprinklers, etc.)

Brick creek flows north-east into a small pond where P.D. #1 is located. Overflow water flows through its natural channel and is stored in a dam down stream. From dam water flows into brick creek to a point where a ditch diverts off due north where P.D. #3 is located. P.D. #3 has an electric pump & motor and pumps from ditch to 2-1/4 mile hard line with 1/2 in. p.p.m. flow control nozzles. Ditch then flows north and turns west where P.D. #2 is located.

P.D. #2; flows into a collection box and is pumped into a 1/2 mile line with a portable pump and powered by a tractor to 3-1/4 mile hard line with 1/2 in. p.p.m. flow control nozzles (1/2 in. p.p.m.). During a normal water year all 3-P.D.'s are operated at the same time supplying water to a total of 8-1/4 mile hard lines.

* Storage water in dam will be calculated from data taken by dam safety engineer Steve M. Cravich.

Storage Reservoir holds 2 25 ac.ft of water.

Total acres irrigated are $\approx$ 250 ac.

Evaluating the above system has shown the pump #1 in Section 18 does not pump storage water identified in this permit. Pump #1 is approx 1/4 mile upstream of said Reservoir. Only the irrigated ground down stream from the reservoir is acknowledged in this exam recommendation. This storage is a one-time fill situation!
