REMARKS: Dropping levels of Marsh Creek caused by increased use of overhead sprinkling upstream has adversely affected subbing of meadow lands. Applicant projects development of portable sprinkling system under pumps to replace sub irrigation and add water to adjacent lands at higher elevations. This to be done over a period of years as the lands can be reseeded and higher lands can be brought under cultivation.

14. During present season applicant has had one pump and portable sprinkling system in use on the areas

			affected. A second such unit is to be added in 1960 and a third and fourth in subsequent years. No works for diversion of the waters from normal stream channels is contemplated. Diversion is to be accomplished at 60 foot intervals by portable siphon attached to moveable pump being dropped in the river bed. The pump is diesel powered, mounted on chassis and wheels. All points of diversion are located on deeded land owned by applicant.
