** Pruntholder does not irrigate all of the lands at once as the discharge of the pump/motor from the point is prohibitive. Water is rotated around the land described on the map photo when & where needed. Only 2-1/4 mi. laterals are used for irrigation.

Mr. Bolingbroke raises grain usually without benefit of irrigation. However, badly needed rainfall does not always occur at the necessary time. His system is designed to distribute a small quantity of water to dry spots over a large area.
