SUBJECT: Lucy Gray Transfers

Today I visited the subject property accompanied by Diana Gray, the applicant's daughter and operator of the property. We drove around the farm in order to verify what is presently irrigated. Diana told me that sprinklers were put on much of the farm starting in 1988 in order to make better use of their water and to eliminate the need for maintaining some five miles of ditches. She stated that the sprinklers merely replaced the old ditches without bringing any new land into production. I was especially concerned about the north end of the farm, which is a long way by ditch from the stream diversions. How successful irrigation of this part of the ground was historically is difficult to tell without being able to observe the old system; they are certainly getting better coverage with sprinklers.

In order to determine the historic P/U, I looked at NAPP and ASCS photos. To the best of my ability to read these photos, it appears that the P/U as of 1986 was about 205 acres. The present P/U under sprinklers is about 235 acres. SRBA informs me that that they will not recommend acres added after 1987 if they know about them; they will get a copy of this memo.

This transfer proposes to add about 25 acres of ground that has historically been dry pasture west of the original farm. Mel has explained to the applicant that the number of irrigated acres cannot increase thru the transfer process, so there should be no acreage increase as long as the transfer is properly conditioned. The limited supply of surface water available in Rock Creek will pretty much control how much land the applicant can irrigate in any one year. If approved, the transfer should allow irrigation of 205 acres per annum with 413.4 24-hour second feet (820 acre feet) per annum for all rights combined on this property. This would follow the spirit of Judge Hurlbutt's recent ruling on the expansion statutes in allowing expansions only if they can be done without exceeding original diversion volumes.
