13. Other Water Rights Used:

14. Remarks: **Transfer 66646**

The right holder shall accomplish the change authorized by this transfer within one (1) year of the date of this approval.

Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.

Right holder shall comply with the drilling permit requirements of Section 42-235, Idaho Code.

After specific notification by the Department, the right holder shall measure the diversion or shall enter into an agreement with the Department to determine the amount of water diverted from power records and shall annually report the information to the Department.

The total instantaneous diversion of water from all points of diversion under Rights 43-2356B, 43-2441C, 43-4022B, 43-4023B and 43-4024D shall not exceed 17.00 cfs, nor total combined annual volume of 3645.6 af.

Rights 43-2356B, 43-2441C, 43-4022B, 43-4023B and 43-4024D when combined shall not exceed the irrigation of 911.4 acres.

This right is limited to the irrigation of 125.4 acres within the place of use described above in a single irrigation season.

This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.

Prior to diversion of water under this approval, the right holder shall provide a means of measurement acceptable to the Department from all authorized points of diversion which will allow determination of the total rate of diversion.

Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

Subject: Claims Originally Filed in Fosha vs. Dunn Adjudication
=====

This claim was originally filed in the Fosha vs. Dunn Adjudication which has subsequently been consolidated with the SRBA. Claimants in Fosha vs. Dunn were not required to file a new claim in the SRBA. In some cases, however, claimants may have filed an amended claim in the SRBA.

The original claims consist of both an original white copy with the original signature and a yellow carbon. Both of these forms must be retained in the IDWR files. The original form included a green carbon which is the claimant's copy. As stated above, there may also be an amended claim.

The review of this claim initially occurred in 1985/1986 by IDWR Adjudication staff. The review process included field examination by IDWR Southern Region Staff (Loren Holmes and Allen Merritt) in 1985 and additional review by IDWR State Office staff (Don Shaff, John Noyes and Forrest Luthy). The claim review documents include:

- // ~~Final recommendation~~ - shown on zeroxed copy of claim, with recommendation shown in RED
- // Adjudication Claim Analysis Sheet (consider this a replacement for the currently used Claims Verification Report (CVR))
- // Map
- // Correspondence, Memos to File, etc.
- // Zerox of original receipts (this is because the original receipt was hand written, prior to the computer receipting). However, in most instances, a voided receipt has been created in the computer in order to update the record to the Host Master.

I have reviewed the claim at this time in order to evaluate the completeness of the original review and have it meet current standards. I have created an R record and verified the recommendation when possible. Generally, the review is based on information available at the time of the original review in 1985/86. Unless there is a discrepancy, additional information of more recent origin has not been added to the review process.

Unclear as to what system is used to irrigate the recommended PON.

According to recommendation -			but Loren's system

It appears - we recommended what was claimed and we were justified in doing so based on Landsat, however, due to change of PON from license, need to confirm water can be delivered to PON claimed/recommended. ~~JEN~~ JEN

INTEROFFICE MEMORANDUM

TO: TRANSFER FILE NOS. 5224 & 5225
FROM: KELLY K CHRISTENSEN
SUBJECT: ADJUDICATION REVIEW OF TRANSFERS
DATE: 03/18/99

The two transfers affect two independent farms. The north farm is referred to as the **Idahome Farm** and the southern farm is referred to as the **Malta Farm**.

IDAHOME FARM

This system is one well irrigating 240 acres. There is one license (43-02356) on this property and it is for 240 acres at 2.94 cfs or 0.012 cfs/acre.

Some questions exist relating to partial forfeiture for a portion of 43-02356, however I agree with Corey that there is no clear evidence of partial forfeiture and therefore I accept all 240 acres as being available for transfer. See also Corey Skinner's Memorandum dated 2-12-1998.

MALTA FARM

There are five statutory claims and one license claimed on this farm. Analysis for adjudication purposes indicates that three statutory claims and a portion of the licensed right are valid. The original farm is now owned by two different entities and they have claimed their respective portion of the rights appurtenant to their property.

After reviewing the evidence of priority available for the statutory claims, I feel that there is sufficient evidence to recommend them with their claimed priority dates (advanced to the beginning of the irrigation season for the year claimed where necessary). The history is that each well was independently developed and originally claimed as a statutory claim. Each new well provided water for new ground and/or supplemented the irrigation of ground previously developed.

Stockwater was identified as being minor and supplemental to the irrigation use. No rate was claimed for stockwater

on the statutory claims and the total diversion rate matched the claimed irrigation rates. The adjudication claims reduced the irrigation-claimed rate by 0.24 cfs and included stockwater at 0.24 cfs. The total rate matched the original statutory claimed rate.

As stockwater was developed incidental to the irrigation use, I agree with the transfer position of reducing the irrigation rate by the amount recognized for stockwater. However, I do not feel that each right should be recommended for stockwater at 0.24 cfs and then conditioned in remarks to a combined limit of 0.24 cfs. I recommend that the stockwater use be proportioned between the three earliest statutory claims at 0.08 cfs each (totaling 0.24 cfs). This appears to better describe the historical development of stockwater and does not give the appearance of a series of stockwater rights (when combined) exceeding 0.24 cfs.

Included with the documentation of the statutory claims was evidence of measurements made in 1963. As those measurements represent the best evidence of the original developed diversion rate, they are the basis for the recommendations.

The total claimed diversion rates for the statutory claims and the one licensed right, when combined, exceed an inch to the acre. My recommendation recognizes the rights in order by priority date, up to one inch per acre. In accepting each statutory claim as valid, the issue of which claims to recommend and at what rate then becomes one of diversion rates vs. priority date up to the required system total rate.

The pre transfer conditions identified by Corey Skinner are as follows:

PLACE OF USE MALTA FARM

1,025 acres irrigated -- transfer field review by CS
(this excludes a portion of the original
farm now owned and claimed by Anderson.)

66 acres for application for permit 43-07209 (on hold)
959 balance irrigated as of commencement (pre transfer)

959 acres * 0.02 cfs = 19.18 cfs

PLACE OF USE IDAHOME FARM

240 acres irrigated licensed P/U 43-02356

2.94 cfs licensed rate

COMBINED PLACE OF USE ANALYSIS

The goals of the two transfers are:

- to equally proportion the water between the two farms
- to add 16.4 acres to the Idahome Road farm
- to reduce the place of use on the Malta farm
- to split off stockwater and domestic uses also on the Malta Farm. A reduction in irrigated acres allowing a change in nature of use for the domestic and stockwater uses, allows them to be independent of all irrigation uses.

Total acres irrigated between the two systems are;

959 acres + 240 acres =	<u>1199 acres.</u>
Post transfer acres for the Malta Farm =	911.4 acres
Post transfer acres for Idahome Road =	<u>256.4 acres</u>
Total	<u>1167.8 acres</u>

The combined post transfer P/U is therefore 31.2 acres less than the combined P/U, pre transfer. The volume for these acres can be allocated for the stockwater being split from the statutory claims). $0.24 \text{ cfs} / 0.02 \text{ cfs/acre} = 12$ acres to be dried up for the stockwater use.

Analysis and the basis for the recommendations continues within the split tree layouts developed for each right involved in these transfers. Rates shown within the initial box represent the rates recognized as valid for each statutory claim. 43-02441 shows the original licensed rate but is subsequently reduced to the rate that brings the pre transfer place of use up to one inch to the acre.

Claim suffixes, rates, and acre limits are identified on the split trees for each right to be recommended.

Three statutory claims (as split) are recognized as valid and with a priority date prior to this license. As they are being recognized as being developed prior to the license, the rate being recognized for this right is being reduced to the rate required to bring the system total to one inch per acre. The system is recognized to be 959 acres at 0.02 cfs/acre or 19.18 cfs

RE: Request for information on historic pumping rates

The Idaho Department of Water Resources (IDWR) is preparing to recommend claims to water rights to the Snake River Basin Adjudication (SRBA) court for irrigation uses in the Raft River Basin. To facilitate this process, we are requesting data from you in order to estimate historic irrigation well pumping capacities. Specifically, we are requesting information regarding pumping flow rate for wells that have not been previously measured for water right licensing.

This request is made so that IDWR may estimate historic flow rate based on available information including: past flow measurements, pump curves or specifications, system characteristics such as motor horsepower, depth to water, discharge pressure, and irrigation system characteristics. The department understands that water levels throughout much of the Raft River Basin have been declining for many years, most often reducing the water users' ability to divert at the same rate as previously able. The department is attempting to quantify the maximum rate of flow diverted and put to beneficial use in the years prior to November 1987.

IDWR will use the information you submit to make recommendations to the SRBA court for your water right claims. Specifically, recommendations will be made for diversion rate (cfs). The enclosed form will help us reach conclusions pertaining to water quantity recommendations for adjudication claims based on historic beneficial use rather than a decree or license.

The goal of this project is to determine historic maximum diversion rates. It is expected that many irrigation systems change over time. Please detail the system configuration that produced the highest flow put to beneficial use. Since this is a general form, some parts may not apply to your system. Include any additional detail that may help in determining historic flow rates. If you have any questions regarding this data request, or if you prefer to discuss these questions with us instead of completing the form, your call is welcomed. Contact either Scott King at (208) 327-7897 or Cindy Bird at (208) 327-5450. You may also dial the adjudication hotline (1-800-451-4129) and ask for Scott or Cindy. We can also be contacted by e-mail at sking@idwr.state.id.us and cbird@idwr.state.id.us

Please take a moment to complete the form or to give Cindy or I a telephone call. It would be most helpful if we could have this information by December 22, 1999.

Sincerely,

Scott King

Comments / Data Supplied:

2/24/00 returned the form. Pump; 200 hp, 182 ft lift, 55 psi and a flow of 970 gpm was measured. The pump hp was too high for the measured flows. So, the horsepower was adjusted to the shaft horsepower and the efficiency was decrease to 78%.

Well identified as 2409.

Evidence appears to support the claim.

Comments / Data Supplied:

2/24/00 Returned the forms. 200 hp pump, 148 ft lift, 42 psi, and 1130 gpm measured flow.
 The name plate horsepower produced a substantially higher flow rate than the actual measured flow. So I adjusted the horsepower of the pump to the shaft horsepower and decreased the efficiency of the system to 78%.

Comments / Data Supplied:

2/24/00 returned the forms with records for power conservation coefficients.
 Pump analysis was done by Snake River Consulting to improve the efficiency.
 Pump is 300 hp, 185 ft lift, 70 psi and a flow measurement of 2500 gpm, 1995
 In 1986 the lift was 165 ft, 54 psi and a flow of 1865 gpm.
 Adjusted the horsepower of the pump to the shaft horsepower, changed the efficiency
 to 78%, adjusted the discharge pressure and lift because with an increase in
 pressure the lift would also increase.

Well identified as 2407.

Information provided appears to support the claim.

Comments / Data Supplied:

2/24/00 Received returned forms. They supplied information from the Raft River Electric. Field testing information for this pump was provided. Pump 125 hp, 176 ft of lift, 6 psi and measured at 1027 gpm.

Well identified as 2408.

Information provided appears to support the claim.

Comments / Data Supplied:

2/24/00 Returned the form. 1986; 300 hp, 149 ft lift, 49 psi and 2110 gpm measured flow. In 1995 a pump efficiency was done and increased the lift to 169 ft, 70 psi, and a measured flow of 2600 gpm.
Adjusted the horsepower of the pump to the shaft horsepower, changed the efficiency to 78%, adjusted the discharge pressure and lift because with an increase in pressure the lift would also increase.

Comments / Data Supplied:

2/24/00 Returned the form. 1986; 300 hp, 149 ft lift, 49 psi and 2110 gpm measured flow. In 1995 a pump efficiency was done and increased the lift to 169 ft, 70 psi, and a measured flow of 2600 gpm.

Adjusted the horsepower of the pump to the shaft horsepower, changed the efficiency to 78%, adjusted the discharge pressure and lift because with an increase in pressure the lift would also increase.
