MS 7-20-98

Bruneau River and its tributaries situate in Owyhee County, State of Idaho, to the extent of their needs for irrigation and domestic use and the watering of livestock, upon the lands described after each appropriation, respectively, for the number of inches of water (measured under a four-inch pressure) set opposite each name, each fifty inches thereof to be equivalent to a flow of a cubic foot per second, as prescribed by the law of Idaho, the priorities of said appropriations to be fixed as of the time set opposite each name, respectively:

51 0001

The plaintiff, Grandview Irrigation District 150 cubic feet of water per second of time from the Bruneau River with priority as of February 22, 1904, appurtenant to the lands within the Grandview Irrigation District, as shown by a map thereof attached to the stipulation on file herein, to which reference is hereby made.

The defendants and cross-complainants as follows:

A51-00002.
RIGHTS IN BRUNEAU VALLEY.

BRUNEAU BUCKAROO COOPERATIVE DITCH COMPANY, A DOMESTIC CORPORATION OF THE STATE OF IDAHO: Appurtenant to that certain canal in Townships 6 and 7 South, Range 5 East, and Township 6 South, Range 5 East, Boise Meridian, known as the "Buckaroo Ditch", with its point of diversion in the SW¹/₄ SW¹/₄ of Section 26, Township 7 South, Range 6 East, Boise Meridian, for use on lands of its stockholders under said ditch. Out of the waters of the Bruneau River:

A51-00002

✓ 51 0002	548 inches as of January 2, 1883.
✓ 51 0003	1,000 inches as of February 20, 1888.

Boise, ID 83707-0027

Dear Vic:

Enclosed is the draft report on irrigation requirements for the three Bruneau River Canals. The procedures used are what we believe to be the latest version of the Hubble procedure being utilized by IDWR.

Please review the report and give me your comments. If you believe it is timely to submit the draft report to IDWR for discussion purposes and/or negotiations, that would be fine. I don't expect it to change much.

Sincerely,

Charles E. Brockway P.E. Ph.D.

INTRODUCTION

An excess flow analysis to determine irrigation diversion requirements was conducted for the Bruneau Buckaroo Ditch, Hot Springs Ditch, and Southside Bruneau Canal irrigation companies in the Bruneau valley. The Hubble¹ procedure as adopted and modified by the Idaho Department of Water Resources served as the basis of the excess flow analysis. An excess flow analysis provides a basis for determining the duty of water or allowable irrigation diversion for irrigated lands based on crop patterns, soil characteristics, irrigation system constraints, and climatic setting. The resulting diversion volume and rate are utilized by the state in determining volumes and rates for water rights.

This excess flow analysis was conducted using a computer program incorporating the procedures identified in the Hubble report and modifications utilized by the Idaho Department of Water Resources. It is based on reported crop distribution and rotation information, irrigation system operation and management from the irrigation entities, soil information published by the Soil Conservation Service, published consumptive use and irrigation requirements by the Idaho Water Resources Research Institute, and measured canal/lateral seepage. The program analysis is based upon aggregation of the physical characteristics into classes; not, individual irrigated fields.

Based on the excess flow analysis with a twenty percent level of risk, the Bruneau Buckaroo Ditch service area requires a maximum diversion rate of 105 cfs (1.68 mi/ac)

¹*Guidelines for the Evaluation of Irrigation Diversion Rates*, Hubble Engineering, Inc. and Associated Earth Sciences, October, 1991.

in the month of June. For the Hot Springs Ditch service area, the peak irrigation diversion rate is 60 cfs (2.74 mi/ac) during the month of July. The Southside Bruneau Canal Company's peak diversion rate is 75 cfs (3.12 mi/ac) during July. The typical furrow irrigation efficiencies range from 3 to 68 percent over the irrigation season and 10 to 68 percent during the months of June and July. The sprinkler irrigation efficiency was 79 percent.

BACKGROUND

The Bruneau Buckaroo Ditch Company, Hot Springs Ditch Company, and Southside Bruneau Canal Company supply irrigation water to approximately 3,113, 1,096, and 1,205 acres respectively in the valley. Irrigation in the valley started when it was settled in 1884. Historically, the irrigation methods have been surface methods with some conversion to sprinkler. Over the years, the methods have become more efficient through control of irrigation water and improved irrigation methods.

Soils

Based on soil maps for the area, there are approximately fifteen different soil mapping units. These mapping units cover various soil textures, depths and slopes. Based on information given on the mapping units by "Soil Survey of Elmore County Area, Idaho, Parts of Elmore, Owyhee, and Ada Counties"². Table 1 summarizes the general characteristics of the soil map units. From data on each soil map unit, an flood intake family was determined, and a soil moisture holding profile developed. Soils with

²-----, 1991. *Soil Survey of Elmore County Area, Idaho, Parts of Elmore, Owyhee, and Ada Counties*, United States Department of Agriculture, Soil Conservation Service, May 1991.

similar intake families and soil moisture profiles were grouped together for the excess flow analysis. Appendix X contains worksheets for the individual soils and the moisture capacity at one foot intervals.

Irrigation Application Systems

In the service areas, two irrigation methods are predominate. These two methods are sprinkler irrigation and furrow irrigation. Table 2 summaries the five irrigation categories used for the excess flow analysis. These categories were based on arial photography, topology, soils, and discussions with ditch company staff and farmers in the areas. The only difference between the furrow irrigation systems is the slope. It is recognized that actual furrow lengths in the area are not all 1320 feet; however, it is felt that most of the furrow irrigated are close to the 1320 feet in length and that the

irrigators will adjust the furrow inflows appropriately. Only the Bruneau Buckaroo Ditch system serves some sprinkler irrigated lands.

Table 2. Irrigation system characteristics

System	Set Time (hours)	Inflow (gpm)	Length (feet)	Width (feet)	Slope (ft/ft)
Sprinkler	24	12	1320	50	na
Furrow-0.5	24	12	1320	*	0.005
Furrow-1	24	12	1320	*	0.010
Furrow-2	24	12	1320	*	0.020
Furrow-4	24	12	1320	*	0.040

* -- Furrow width depends on crop type

Crops

The crops grown in the delivery areas of these irrigation companies consist of alfalfa hay, silage corn, grain, potatoes, and pasture. For the purposes of the excess flow analysis, grain has been assumed to be spring grain. As shown in Table 3 hay, potatoes and pasture are primarily found the Hot Springs service area; whereas, hay, grain and silage corn are found on the Bruneau Buckaroo Ditch area. The Southside Bruneau Canal service area has alfalfa, grain, potatoes, corn, and beets.

Table 3. Bruneau area crop distributions

Crop	Buckaroo acres (%)	Hot Springs acres (%)	Southside acres (%)	Total acres (%)
Alfalfa	2787 (89.5)	424 (38.7)	647 (53.7)	3858 (71.3)
Grain	196 (6.3)		36 (3.0)	232 (4.3)
Potatoes		79 (7.2)	201 (16.7)	280 (5.2)
Pasture		593 (54.1)		593 (10.9)
Silage Corn	130 (4.2)		40 (3.3)	170 (3.1)
Sugar Beets			281 (23.3)	281 (5.2)
Total	3113 (100.)	1096 (100.)	1205 (100.)	5414 (100.)

The rooting depths for the crops were assumed to vary with the irrigation with the exception of pasture and alfalfa hay. The rooting depth over the season for grain was assumed to range from 0.5 to 3.0 feet, the rooting depth for potatoes was assumed to range from 0.5 to 2.0 feet, the rooting depth for silage corn was assumed to range from

0.5 to 3.0 feet, and the rooting depth for sugar beets was assumed to range from 0.5 to 3.0 feet. For the perennial crops of pasture and alfalfa hay the rooting depths were assumed to be two and four feet respectively. If the soil depth was less than that of the crop, the rooting depth was limited to the soil depth.

The allowable soil water deficits from field capacity for the various crops were 60, 50, 50, 35, 50, and 50 percent for alfalfa hay, silage corn, grain, potatoes, pasture, and sugar beets respectively. These deficits were determined from various extension service publications and verified in discussions with farmers and ditch company staff.

Associated with the various crops and furrow (corrugate) irrigation methods is the irrigated furrow spacing. The furrow spacings used for the various crops were 30 inches for alfalfa hay, silage corn, grain, and pasture. The furrow spacing for potatoes and sugar beets was 36 and 22 inches respectively.

Irrigation Delivery Systems

The three irrigation ditch companies divert water from the Bruneau River and transport the irrigation water through ditches (laterals) paralleling the river. The Bruneau Buckaroo Irrigation ditch is approximately 11.5 miles long, the Hot Springs Irrigation Ditch is approximately 7.5 miles long and the Southside Bruneau canal is approximately 10.7 miles long. Table 4 characterizes the three irrigation delivery systems. The seepage or loss from the delivery laterals was measured by Brockway Engineering during the 1994 irrigation season. Losses were measured by inflow-outflow methods by reach of each canal using measuring devices in place or current metering. Measurements and calculated canal losses by reach are included in Appendix D

Table 4. Irrigation lateral characteristics

* measured canal seepage, Brockway

Climatic Setting

The Bruneau Valley is situated in southern Idaho south of Mountain Home. It is an semi-arid area and irrigation is required for crop production. The closest climatic stations with computed crop consumptive use and irrigation requirements³ is Bruneau cooperative NOAA station. The consumptive estimates for the area are taken from "Estimating Consumptive Irrigation Requirements for Crops in Idaho" (Allen and Brockway, 1983) and are shown in Table 5.

AGGREGATION OF CHARACTERISTICS

Combining the various crops, irrigation systems, soils and lateral segments to for the excess flow analysis was based on distribution of soils along the irrigation delivery ditches and application of the various irrigation systems to appropriate soils classifications. Unless slope information or information from individuals working in the

³Allen, R. G. and C. E. Brockway, 1983. *Estimating Consumptive Irrigation Requirements for Crops in Idaho*, Idaho Water and Engery Resources Research Institute, University of Idaho, Moscow, Idaho.

service area indicate otherwise, the crops were distributed to each soil type based on the overall distribution.

The excess flow analysis program aggregates the diversion flow requirements based on the delivery and seepage loss of the various delivery lateral segments. Lateral segments aggregate the "on-farm" requirements based on percent of soil types served by the segment. Each soil type combines the crop requirements and irrigation system losses based on the crops and systems acreages assigned to the soil type.

Bruneau Buckaroo Ditch System

For the Buckaroo Ditch, each of the three delivery ditch segments were assumed to serve all the soil types with equal distribution of the acres in each soil type across the ditch segments.

The distribution of crops across the five irrigation methods and eleven soil types for the service area are shown in Table 6. Typically, the irrigation system selected was dependent on the soil classification due to slope and the mix of crops based on the overall crop distribution. The distributions shown in the table account for variation due to soil suitability and known areas under sprinkler irrigation methods.

Hot Springs Ditch System

For the Hot Springs Ditch, each of the four delivery ditch segments were assumed to serve all the soil types with equal distribution of the acres in each soil type across the segments.

The distribution of crops across four irrigation methods and eleven soil types for the service area are shown in Table 7. Typically, the irrigation system selected was dependent on the soil classification due to slope and the mix of crops based on the overall crop distribution. The distributions shown in the table account for variation due to soil suitability.

Southside Bruneau Canal System

For the Southside Bruneau Canal system, each of the four delivery ditch segments were assumed to serve all the soil types with equal distribution of the acres in each soil type across the segments.

The distribution of crops across four irrigation methods and eleven soil types for the service area are shown in Table 8. Typically, the irrigation system selected was dependent on the soil classification due to slope and the mix of crops based on the overall crop distribution. The distributions shown in the table account for variation due to soil suitability.

CANAL DIVERSION MEASUREMENTS

Canal diversions from the Bruneau River have been documented either by the U.S. Geological Survey or the ditchriders for each canal. Discharge records for the Bruneau Buckaroo Ditch (USGS station 13169000) are published in Water Resources Data for Idaho. Tabulated mean daily flow for the Bruneau Buckaroo Canal for the 1985 through 1989 period and the average for the 5 year period are shown in Appendix E. The plot of the daily canal flow and period average, included in Appendix E, shows the pattern of early season higher flows with decreasing discharge as the season progresses. This data shows maximum daily flows for this period, which is considered a low flow series of years, of 90 cfs.

Average daily discharge for the Hot Springs Ditch(USGS station 13168600) for the period 1985 through 1989 and the 5 year average is included in Appendix E. The plot of this data shows a maximum average daily canal discharge of 43 cfs for the period. This flow occurred in May of 1989 during what is considered a drought year.

The diversion to the South Side Ditch has not been measured continuously by the USGS for the 1985-89 period as has the discharge for the other two ditches. However, spot measurements have been made by the USGS and discharge has been measured through a calibrated broad crested weir by the ditchrider. The available discharge data for the South Side Canal is shown in Appendix E. The maximum daily discharge measured by the ditchrider(Frank Davis) was 56 cfs in June of 1990, again a drought year.

Comparison of measured canal diversions for the period prior to or surrounding 1989, the time of claim filing in the SRBA, shows that the estimated diversion requirements utilizing the IDWR Hubble procedure are not inconsistent with the actual measured diversions during a series of drought years.

RESULTS

Appendixes A, B, and C contain the output from the three excess flow analysis runs for Bruneau Buckaroo Ditch, Hot Springs Ditch, and Southside Bruneau Canal respectively. The output from the excess flow analysis program includes the input data used for the analyses. The level of risk used for analysis was 20 percent. A 20 percent level or risk implies that that the diversion rate/volume would less than the computed value eighty (80) percent of the time.

Based on the mix of crops, soils, irrigation system information, and climatic data, the irrigated area serviced by the Bruneau Buckaroo Ditch would require a peak daily diversion rate of 105 cfs (1.69 miner-inches/acre) during the month of June as shown in Table 9. The daily diversion rate for June should average 93.6 cfs to meet the crop

water requirements eighty percent of the time. Approximately 9 cfs is required to meet losses associated with the delivery system.

Table 9. Excess flow analysis results for Bruneau Buckaroo Ditch.

	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct
Delivery Loss	9.0	9.0	9.0	9.0	9.0	9.0	9.0	9.0
Peak Application	5.7	35.1	83.4	96.1	89.2	65.4	42.0	13.5
Peak Diversion	14.7	44.1	92.4	105.1	98.2	74.4	51.0	22.5
Application	4.2	28.6	72.2	84.5	81.2	62.5	37.9	11.8
Diversion	13.2	37.6	81.2	93.6	90.3	71.5	46.8	20.8

Based on the mix of crops, soils, irrigation system information, and climatic data, the irrigated area serviced by the Hot Springs Ditch would require a peak daily diversion rate of 60 cfs (2.74 miner-inches/acre) during July as shown in Table 10. A July daily diversion rate average of 53.8 cfs would meet crop water requirements eighty percent of the time. Approximately 7 cfs is required to meet losses associated with the delivery system.

Table 10. Excess flow analysis results for Hot Springs Ditch.

	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct
Delivery Loss	0.0	7.0	7.0	7.0	7.0	7.0	7.0	7.0
Peak Application	0.0	25.8	42.6	52.4	53.0	43.0	31.1	18.0
Peak Diversion	0.0	32.8	49.6	59.4	60.0	50.0	38.1	25.0
Application	0.0	20.3	36.6	44.9	46.8	39.5	27.2	15.4
Diversion	0.0	27.3	43.6	51.9	53.8	46.5	34.2	22.4

Based on the mix of crops, soils, irrigation system information, and climatic data, the irrigated area serviced by the Southside Bruneau Canal would require a peak daily diversion rate of 75 cfs (3.12 miner-inches/acre) during the month of July as shown in Table 11. The daily diversion rate for July should average 68 cfs to meet the crop water requirements eighty percent of the time. Approximately 9.7 cfs is required to meet losses associated with the delivery system.

Table 11. Excess flow analysis results for Southside Bruneau Canal.

	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct
Delivery Loss	9.7	9.7	9.7	9.7	9.7	9.7	9.7	9.7
Peak Application	1.2	48.9	45.9	55.5	65.4	50.4	31.6	10.0
Peak Diversion	10.9	58.6	55.6	65.2	75.1	60.1	40.9	19.7
Application	0.9	36.1	38.6	47.7	58.0	46.5	27.5	8.6
Diversion	10.6	45.8	48.3	57.4	67.7	56.2	37.2	18.3

The three irrigation service areas combined require an estimated average daily diversion rate of 212 cfs during July from the Bruneau River.

Measured canal diversions for the period 1985-89 for the Bruneau Buckaroo and the Hotsprings Canals and for the period 1987-92 for the South Side Canal shown in Appendix E. are not inconsistent with the estimated diversion requirements obtained utilizing the IDWR Hubble procedure.

Re: Snake River Basin Adjudication (SRBA)
Notice(s) of Claim -- Please see attached list
Change of Address

Records changed 9-2-94

Dear Claimant(s),

IDWR has been notified by the Bruneau post office the address presently in our claim records is incorrect. Although I have reached you at the address above, I need you to confirm this is your correct mailing address. Future notices related to your SRBA claim(s) can be sent only to the address on your claim(s) or as otherwise changed by you. The staff of this agency must avoid relying upon the word of others about your mailing address.

If the address above is correct, please sign your name at the bottom of this letter, and return it to this office. Otherwise, please make the proper corrections, sign, and return this letter. Thank you for your help to make sure you receive the future notices we intend to send to you that will keep you notified about SRBA matters.

If the ownership of the property to which this water right applies has changed, please call this office toll-free at 1-800/451-4129 to obtain a form to make this required change to the claim record.

Sincerely,

Adjudication Bureau Staff

CLAIMANT'S NAME: Vic Conrad - SimplotDATE: 8-1-94

COUNTY: _____

EMPLOYEE: Linda Werner

V.C. in today as he is doing research on Owens water rights & usage because of a floodwater permit they applied for in Sept. He wanted to review the files on S. Side Canal Hot Springs ditch & Brauman Buckaroo ditch. His main interest is in the location of individual turnouts from these canals. We do not have this information. He had already received a copy of Hot Springs ditch map P.O.U. He wanted my ^(copy) map of B.B.D. P.O.U. It was decided he could have a copy but since it's a large map & we can't let originals leave the office him & I went to Wintons & had 2 copies made for themselves (they paid). Also ran 2 copies each of 4 aapp photos which showed P.O.U. of Brauman valley.

I advised him very carefully that the map of B.B. ditch P.O.U. may be subject to change. He understood that.

ADJUDICATION MEMORANDUM

CLAIM NO.: _____

SUBJECT: _____

EMPLOYEE: Linda WernerDATE: 4-7-94

RE: Bruneau Buckaroo Ditch
Cindy Bachman in office today to discuss above.
We went over the land list I made up
& I showed her the maps I used to help
me determine place of use. She agreed
that my method of calculation was
accurate, after we discussed a few problem
P.O.U. areas. I advised her that the
land list was still subject to some
revision after the other water rights
agents wrote up the field exams they
did on the other owners having private
claims in the same area.

JEAN JEWETT CAMPBELL CLAIM. A51-04058*

RE: Irr. BLM ground A51-12762

Cindy said they are leasing a portion of
the Jewett property (120 acres) & they
have no intention of irr. the BLM ground
in the N $\frac{1}{2}$ SE $\frac{1}{4}$. Also - it's not
included as P.O.U. in their lease
agreement.

Subject: Buckaroo Ditch Company Adjudication Claims

Gentlemen:

Following a recent review of the adjudication claim notices filed by the Bruneau Buckaroo Ditch Company, I was informed by Dick Owen that the Buckaroo adjudication claims do not include in the claimed place of use a portion of Owen Ranches' Lower Ranch that is currently irrigated using water from the Bruneau Buckaroo Ditch. This area includes approximately 20 acres in the SW 1/4, NW 1/4, Sec. 15, T7S, R6E and approximately 30 acres in the SW 1/4, NE 1/4, Sec. 15, T7S, R6E.

I suggest that you check your records to verify these places of use and then contact Idaho Department of Water Resources to determine the procedure for revising the adjudication claims. Please call me at 345-5865 if you have any questions.

Sincerely,

Terry M. Scanlan, P.E.

Subject: Buckaroo Ditch Company Adjudication Claims

Gentlemen:

While preparing some water right transfer applications for Owen Ranches, I recently had the opportunity to review the adjudication claim notices for the Bruneau Buckaroo Ditch Company. I noticed some probable errors in the claim notices and thought you would be interested.

The most significant errors were found in adjudication claims A51-00003, -00005, -10271, and -10350 which claim 262 acres of irrigation use in the Sec 25, T6S, R6E, and A51-00002 which claims 79 acres of use in the Sec 25, T6S, R6E. These claimed places of use appear to be one township (six miles) east of the actual place of use. The actual place of use is probably Sec 25, T6S, R5E. Similarly, claims A51-00003, -00005, -10271, and -10350 show 40 acres of irrigation use in the SESW Sec 24, T6S, R6E. These claims also appear to be one township east of the actual place of use and appear to belong in R5E rather than R6E.

A probable error is A51-00003 claiming 20 acres in the NWNW Sec 15, T6S, R5E, which is entirely Strike Reservoir pool. I suspect that the 20 acres in the NWNW Sec 15 in A51-00003 is a typographical error, and should have been the NENW. Another possible error is that three rights (A51-00002, -10271, and -10350) claim 40 acres in the NENW Sec 15, T6S, R5E. However, approximately one-third of this quarter-quarter section is within the pool of Strike Reservoir.

Comparisons of several claims suggests that A51-00003 may be missing 15 acres in the SWNE 5 7S, 6E, and may have listed 3 acres too much (i.e., 18 acres instead of 15 acres) in the SENE Sec 5. This potential error is based only on consistency between claims, and may actually be correct. You should check your water right records to verify if the claim is correct.

June 1, 1993

I suggest that you check your records to verify these potential errors, and then contact Idaho Department of Water Resources to determine the procedure for submitting revisions to adjudication claim notices. Please call me at 345-5865 if you have any questions.

Sincerely,

A handwritten signature in cursive script, reading "Terry M. Scanlan".

RE: Change in Notice of Appearance of Counsel on the Snake River
Basin Adjudication Claims for Owen Ranches, Pioneer Irrigation
District, Cyprus Thompson Creek Mining Company, Conversion
Industries U.S.A., Inc. and Settlers Irrigation District

Dear Scott:

The five computer reports enclosed confirm the change in firm
and address you requested in your letter dated February 13, 1992.
By comparing these reports to the list you supplied with your
letter, you will see not all of the water right claims listed in
your attachments were changed. Those claim records not changed are
filed by persons other than your client(s).

The possibility of questions I raised in our telephone
conversation last week were resolved for my part. If you have any
questions or need some points clarified, please feel free to
contact me.

Thank you for supplying the claim lists in an orderly fashion.

Sincerely,

Donald V. Shaff
Manager, Adjudication Section

Re: Notice of Change in Address and Firm Affiliation

To Whom it May Concern:

Please note that I have changed my law firm affiliation, effective January 1, 1992. I am now a partner with the Boise office of Davis Wright Tremaine with the above new address. Please make sure that all documents sent to me from Water Resources, including the Weekly Water Right Print Out sheets, are revised to reflect this change. Thank you for your assistance.

Very truly yours,

**Re: Change in Notice of Appearance of Counsel on the Snake River Basin
Adjudication Claims for Owen Ranches, Pioneer Irrigation District,
Cyprus Thompson Creek Mining Company, Conversion Industries U.S.A.,
Inc. and Settlers Irrigation District**

Dear David:

Pursuant to a prior telephone conversation with Ms. Lynne Krogh-Hampe, I am providing this correspondence to notify the Idaho Department of Water Resources of my change of address and affiliation. I am presently a partner with the law firm of Davis Wright Tremaine at the above-referenced address.

Because of this change, I request that the Idaho Department of Water Resources make the necessary modifications to its records pertaining to the Snake River Basin Adjudication regarding the water rights and notices of claim identified for the above-referenced clients, as indicated on the attached lists, marked Exhibit A. Based upon my prior conversations with Lynne, she indicated that one letter with identification of the individual water right numbers would be sufficient. Please notify me in writing if this is not the case. Additionally, I would appreciate receiving written confirmation that the requested changes in your records have been made, so that I may include copies of your confirmation in the individual claim files for each client and each water right.

Thank you very much for your cooperation.

Very truly yours,

DAVIS WRIGHT TREMAINE

PROBLEMS IN BRUNEAU BUCAROO DITCH
PER CONVERSATION WITH TERRY BLACK
3/17/89

SOME WATERUSERS UNDER THE DITCH SYSTEM HAVE PRIVATE BRUNEAU RIVER WATER RIGHTS TO PUMP DIRECTLY OUT OF THE RIVER. THESE WATERUSERS DO NOT PUMP OUT OF THE RIVER ANYMORE AND INSTEAD USE THEIR BRUNEAU BUCAROO DITCH RIGHTS TO IRRIGATE THE ADDITIONAL LAND THEY USED TO IRRIGATE FROM THE PUMP IN THE RIVER. NO ADDITIONAL WATER IS DIVERTED HOWEVER, THIS PRACTICE DOES INJURE OTHER USERS ON THE DITCH BECAUSE THESE WATERUSERS DIVERT FOR LONGER PERIODS OF TIME. THEN, WHEN A WATER SHORTAGE OCCURS, RATHER THAN ROTATING THESE USERS, THE LATEST PRIORITY WATERUSERS ARE CUT OFF. THE OTHER WATERUSERS HAVE THEIR LATER PRIORITY WATER CUTOFF ALSO, BUT CONTINUE TO IRRIGATE THE EXPANDED ACRES WITH THEIR EARLIER PRIORITY RIGHTS.

THE 1893 WATER RIGHTS WHICH WERE ASSIGNED IN 1926 TO THE DITCH COMPANY NOW APPEAR TO BELONG TO IPCO. IF THESE RIGHTS ARE INCORPORATED INTO THE DITCH(1897 WATER ALSO), THEN WHEN THE LATE SUMMER CUTOFF OCCURS, THE 1905 WATER USERS WILL BE CUTOFF SOONER TO SATISFY THE 1893 & 1897 WATER RIGHTS WHICH INJURES THE 1905 WATER USERS NOW, WHEN THEY DID NOT HAVE TO WORRY ABOUT THESE RIGHTS BEFORE. WHAT SHOULD BE DONE IS THE PRIORITY DATE ADVANCED TO THE DATE THE POINT OF DIVERSION WAS CHANGED FROM THE BRUNEAU RIVER BELOW THE BUCAROO DITCH P.D. TO THE BUCAROO DITCH P.D. THIS DATE WAS IN 1926. CLAIM NO.'S A51-00039 AND 45" OF CLAIM NO. A51-00004 HAVE THE WATER MENTIONED ABOVE.

SOME OF THE LANDS SHOWN ON THE BRUNEAU BUCAROO LAND LIST FOR THEIR ADJUDICATION CLAIMS ARE LANDS THAT DID NOT HAVE DITCH SHARES, BUT DO HAVE BRUNEAU RIVER WATER. SOMEHOW WE WILL HAVE TO FIND WHICH ACRES SHOULD HAVE DITCH RIGHTS AND WHICH SHOULD HAVE DIRECT DIVERSION RIGHTS OUT OF THE BRUNEAU RIVER, POSSIBLY BY EXAMS FOR EXISTING POINTS OF DIVERSION. HOWEVER, THERE MAY BE EXISTING POINTS FOR OTHER LANDS NOT PREVIOUSLY LISTED IN THEIR PRIVATE DIVERSION RIGHTS, BUT LISTED NOW ON THEIR ADJUDICATION CLAIMS. EXAMS ON WHAT COULD HAVE BEEN IRRIGATED IN 1883, 1888, 1897 & 1905 BASED ON THE # OF INCHES ISSUED IN THE OLD DECREE WILL MOST LIKELY BE NEEDED.

AS FAR AS THE PROBLEMS WITH THE DITCH CO. IT APPEARS TO BE AN INTERNAL PROBLEM SINCE THE DEPARTMENT'S JURISDICTION ENDS AT THE POINT OF DIVERSION INTO THE DITCH FROM THE RIVER. WE WILL MOST LIKELY TRY TO TALK TO THE DITCH CO. DIRECTORS IN THE MEANTIME.

Dave:

I presented this
protest at the
Jan 9th meeting

Bob

Jan. 9, 1989

✓ JMR Jan
Bruneau Buckaroo File

TO: The Buckaroo Ditch Company and The State Of Idaho's Department
of Water Resource

I ask the Bruneau Ditch Co. for legal protection from the
directors past and present. I Protest, and do Protest to the
State of Idaho's Department of Water Resource, the New Proposed
Resolutions and Policies for the Bruneau Buckaroo Ditch Company.

page 2
Res. #2

1. Claim to easement on private property of 50 feet. I
protest because, only a verbal use has ever been granted.

page 3
Res. #3

2. Shall serve as the basis for making & filing the notice
of claim for the Buckaroo Ditch Co. in the Snake River
Basin Adjudication. I protest because, of the Bruneau
River Adjudication.

3. Further resolved, that the element of water rights as
stated above (proposed resolutions & notices of Bruneau
Ditch Co.) shall be deemed to represent the actual his-
torical delivery and use of water diverted from the Bruneau
River and delivered through the Buckaroo Ditch. I protest
because, it does not represent the actual historical de-
livery and use of the Bruneau River Adjudication of share-
holders. This states the true purpose. The rest of the
new resolutions are political to achieve this plan.

page 4&5
preamble

4. The attempt to control where shareholders decreed water
can go and determine what land it can go on. I protest
because, it is not the business of the Ditch Co., it is
the business of the State of Idaho. Old by-laws and Comp-
any records require water to be measured at 4 inch head
when control is needed on the ditch.

5. Illegal use of Bruneau River Adjudicated water. I protest
because the new resolution will allow the irrigation of
property which can come under Snake River Basin adjudi-
cation, but not the adjudication of Bruneau River water
that has been decreed to Shareholders prior to 1925.

In my opinion these new resolutions circumvent the by-laws
and certificate records. They allow the directors complete control
without regard of law and equity.

cation, but not the adjudication of Bruneau River water
that has been decreed to Shareholders prior to 1925.

In my opinion these new resolutions circumvent the by-laws
and certificate records. They allow the directors complete control
without regard of law and equity.

Dear Dave;

In view of the recent controversy of the Bruneau Buckaroo Ditch Co, and Asa Black, I would like to clarify our position in this matter.

From your recent inspection of pumps along the ditch, and the pumps of both our ranches, you are aware that we are on the end of the ditch with the one ranch.

The ranch up Hot Springs road has a pump and sprinkler system. This system was installed, and has been in operation since March 1981. Prior to 1981 the ranch was gravity flow irrigated, with water being pumped, mixed with well water, to the head of the fields, and flowing into the various fields.

The original diversion, a water wheel and flume system, was used. Part of this structure remains today. Later a gas engine was installed at the water wheel site, and in the 1940's the diversion site was moved to the present location. This site was modified to allow for the sprinkling system installation and being used today.

We, Colyer Cattle Co., hold two certificates of stock shares in the ditch company for this ranch. The two certificates, No.292 and 293, are for a total of 27 first priority, 28 second priority, and 10 third. Total of 65 inches.

My father, Errol Black, purchased this ranch from Ralph Howell and W.R. Polson in 1951. Mr. Polson purchased it from the Bruneau State Bank who was the purchaser at a mortgage foreclosure execution sale of the heirs of Robert Adams estate.

Robert Adams was the original owner of this land, description inclosed, upon which Certificate No.10 for 1,562.5 shares or 62.5 inches of water was used. Mr. Adams was one of the original twelve subscribers of the Buckaroo Ditch Co. and purchased these shares for \$1.00 each, on Nov. 24, 1903. Surely Mr. Adams was already using water upon these lands above the said canal, to be able to purchase these shares, and establish decree. The acres below the canal, today being approximately 17 acres, would not be sufficient to water with 62.5 inches.

Today the land above the canal is much higher than it could of been in the 1800 and early 1900's, however, since we have been farming it, we have had three major water spouts, bringing onto our land a large amount of rocks and soil. The latter of which occurred Sept. 8, 1985. (Picture inclosed). And we are certain many others had occurred since it was first farmed.

Asa Black, making reference to this aforementioned ranch, has many times, both in private, and at shareholders meetings, questioned the validity of our shares and priorities in the Bruneau Buckaroo Ditch Co., and used this means as an argument so he may be allowed to continue pumping also.

In closing, I would like to remark on how flustering it is to be on the end of a canal, where no control, whatsoever, is practiced. We either have no water or too much. Last week we barely had our shares, and today, Monday, August 15, the ditch was running over. I have pictures to document this.

MICROFILMED

AUG 10 1992

In 1987 we lost a corn crop, on this lower ranch, due to three weeks without water, trying to get Ace Black shut down enough to get water to the end of the ditch. By the time we got sufficient water the corn was stressed enough that it didn't recover. Picture included.

This year we are receiving closer to our allotment, but even on good years we have problems getting our share. We have requested measuring devises and some have been installed throughout the system, but weirs or flo-meters on the individual headgates and, or pumps, could be the only way to control the shares being delivered to the shareholders.

Sincerely;

Bonnie C. Colyer

Regular Meeting of the Board
Bruneau Buckaroo Co-operative Ditch Company.
April 5th 1926.

The meeting was called to order by the president, followed by roll call to which the following directors responded: Ruud, Jones, Rahn and Hewitt. Minutes of March the 1st were read and approved.

The Board has been advised, that they have the power, to decide, on the letting in the Buckaroo Ditch, that is, the so called BLACK DITCH and ERROL BLACK, which will be found in the minutes of 1918, on the same bassets as the Portlock People.

Q. L. Webb, received certificate of 500 shares pa the paidup capital stock transferred from the Bruneau State Bank.

Upon motion duly made by director Hewitt and second by director Jones, that the president appoint Q. L. Webb, as a Director, whereupon, Mr. Webb, took the oath of office of the Company.

Bill Parker, was appointed Ditch-Rider for the season, receiving 100.00 per month.

Mr. Craig, requested of the Board, in behalf of Joe Taylor, for the cancellation of certificate #130 representing 375 shares of the paid up capital stock of the Company, issued to Retta Royse, requesting the issuance of a new certificate representing 375 shares of the paid up capital stock to Joe Taylor. The request was granted upon motion made by director Webb, and second by director Hewitt.

It was decided that the work on the Ditch be divided as follows: Ruud, to start at the lower end of the ditch and work up, Jones to start at Jones' Drop and work down until they meet. Hewitt, has charge of the upper end.

The secretary was instructed to notify Mr. Chattin, to demonstrate one of his Ditchers.

Frank Ross - - - - -	Cleaning weeds out of Ditch - - - - -	38.00

Carried Forward,

of one (1) inch of water per acre for all cultivated lands under the Bruneau Buckaroo Co-operative Ditch Company's ditch system in accordance with the survey made by C.J. Franklin Civil Engineer in the year 1919, the said acreage of (1548) acres with a priority of January 2nd, 1883 for (548) acres, a priority of February 20th, 1888 for (1000) acres, on the basis of ($\frac{1}{2}$) one half inch of water per acre for all irrigated pasture lands per survey of 1919, (1038) acres with a priority of April 1st, 1897, 745 inches of water with a priority of April 1st, 1905, Two thousand two hundred fifty five inches of water ahead of the Grandview priority, seven hundred forty five inches of water later than the Grandview priority or a total claim of (3000) three thousand inches of water out of the waters of the Bruneau River,.

Be and the same is hereby accepted by the board of directors, believing it to be to the best interests of the stockholders so to do, the said resolution and order was seconded by director Benham, a vote taken thereon resulted as follows Ayes Holverson, Benham, Craig, Newkirk, Nays None, the said resolution was declared carried and so ordered.

Now Therefore: the following regulation for the distribution of water from the Buckaroo Ditch be and is hereby ordered, When ever the water flowing in the buckaroo Ditch as it now is, or hereafter re-constructed, is for any reason insufficient to supply all demands of the stockholders thereof, the water master is hereby instructed to distribute water in accordance with the following RULES & REGULATIONS, per SCHEDULE as follows

-First Priority-

1. Water shall be distributed to all cultivated lands pro-rata in accordance with the survey made by C.J. Franklin Civil Engineer, in the year of 1919, up to the extent of one (1) inch of water to the acre delivered at the users headgate,

- Second Priority-

2. Water in excess of the amount necessary to supply Priority No. 1, shall be distributed pro-rata to the irrigated pasture lands up to the extent of ($\frac{1}{2}$) one half inch of water to the acre delivered at the users headgate,

-Third Priority-

3. Water in excess of the amounts necessary to supply Priorities Nos. 1. & 2. shall be distributed pro-rata first to the cultivated lands up to the extent of one inch of water to the acre, irrigated pasture lands ($\frac{1}{2}$) one half inch of water to the acre, delivered at the users headgate,

-Rotation-

In the event there is not sufficient water in any one priority to fill all of the demands of said priority and pro-rating would result in too small an individual head, the water master may in his discretion enforce a system of rotation beginning at the lower end of the ditch, No private arrangement for rotation between users will be recognized without the express consent of the water master.

BRUNEAU-BUCKAROO DITCH COMPANY.

J. L. Webb moved the adoption of the following resolution which was seconded by C. J. Rahn, and unanimously carried:

WHEREAS: The capital stock of the Bruneau-Buckaroo Cooperative Ditch Company was heretofore increased for the purpose of absorbing all water rights in the old Black Ditch and consolidating the same with water rights of this company;

WHEREAS: The Stockmens Loan Company as successor to the Stockmens National Bank is the owner of the following described water rights:

A water right of 65 miner's inches as of October 27, 1893, a water right of 35 miner's inches as of April 1, 1897, and a water right of 50 miner's inches as of April 1, 1905, appurtenant to the Southeast quarter of the Southeast Quarter (SE $\frac{1}{4}$ SE $\frac{1}{4}$), North Half of the Southeast Quarter (N $\frac{1}{2}$ SE $\frac{1}{4}$), South Half of the Northeast Quarter (S $\frac{1}{2}$ NE $\frac{1}{4}$), Section 9, Northwest Quarter of the Southwest Quarter (NW $\frac{1}{4}$ SW $\frac{1}{4}$), Section 10, Township 6 South, Range 5 East B. M., by virtue of a decree in favor of the Stockmens National Bank, dated February 14, 1925, in the cause entitled "Grandview Irrigation District, Plaintiff, vs. Bruneau Buckaroo Cooperative Ditch Company, et al, Defendants" in the District Court of the Third Judicial District of the State of Idaho, in and for Owyhee County, and thereafter removed to Ada County.

WHEREAS: The Stockmens Loan Company has offered to convey the foregoing water rights to this corporation and to abandon the Black Ditch from the point of its diversion near the middle of Section 23, Township 6 South, Range 5 East B. M., to the point where waters from the Buckaroo Ditch are conveyed into said Black Ditch at about the southeast corner of the Southwest Quarter of the Southwest Quarter of Section 10 in said Township and Range and to pay to this corporation the sum of FIVE HUNDRED DOLLARS (\$500.00) in consideration of the issuance by this

BARGAIN AND SALE DEED

THIS INDENTURE, Made this 23rd day of February, in the year of our Lord one thousand nine hundred twenty-eight, between STOCKMENS LOAN COMPANY, an Idaho corporation with its principal place of business at Nampa, Canyon County, therein, party of the first part, and ~~BRUNEAU-BUCKAROO CO-~~ OPERATIVE DITCH COMPANY, a domestic corporation, with its principal place of business at Bruneau, Owyhee County, Idaho, the party of the second part,

WITNESSETH, That the said party of the first part, for and in consideration of the sum of ONE AND NO /100 DOLLAR, lawful money of the United States of America, to it in hand paid by the said party of the second part, the receipt whereof is hereby acknowledged, has granted, bargained, sold and conveyed, and by these presents does grant, bargain, sell and convey unto the said party of the second part, and to its successors and assigns, forever, the following described water rights in Owyhee County, State of Idaho, to wit:

A water right of 65 miner's inches as of October 27, 1893, a water right of 35 miner's inches as of April 1, 1897, and a water right of 50 miner's inches as of April 1, 1905, appurtenant to the Southeast Quarter of the Southeast Quarter (SE $\frac{1}{4}$ SE $\frac{1}{4}$), North Half of the Southeast Quarter (N $\frac{1}{2}$ SE $\frac{1}{4}$), South Half of the Northeast Quarter (S $\frac{1}{2}$ NE $\frac{1}{4}$), Section 9, Northwest Quarter of the Southwest Quarter (NW $\frac{1}{4}$ SW $\frac{1}{4}$) Section 10, Township 6 South, Range 5 East, B. M., by virtue of a decree in favor of the Stockmens National Bank, dated February 14, 1925, in the cause entitled "Grandview Irrigation District, Plaintiff vs. Bruneau Buckaroo Co-operative Ditch Company, et al., Defendants" in the District Court of the Third Judicial District of the State of Idaho, in and for Owyhee County, and thereafter removed to Ada County.

It is the intention of this instrument to sever the above described water rights from the above described

65"-1893 comp.

land and to make the same appurtenant to the irrigation system of the grantee, transferring the point of diversion from the head of the Black Ditch to the head of the Buckaroo Ditch.

TO HAVE AND TO HOLD, All and singular the said water rights together with the appurtenances, unto the said party of the second part and its successors and assigns forever.

The party of the first part does hereby declare its intention to abandon and does abandon all right, title and interest in and to the so-called Black Ditch, from its head on the Northeast bank of the Bruneau River near the center of Section 23, Township 6 South, Range 5 East, Boise Meridian to the point where waters from the ditch of the grantee herein are conveyed into said ditch at about the Southeast corner of the Southwest Quarter of the Southwest Quarter of Section 10 in said township and range, the said ditch being the conduit formerly used for the carrying of the water herein conveyed.

IN WITNESS WHEREOF, The said party of the first part has caused these presents to be executed by its officers thereunto duly authorized on the day and year first above written.

THIRD PRIORITY

1000 - 40 inches

This is not as filed and is splitting water to different ground instead of stepping to shares owned in ditch. I protest this single-ing out and do not approve of this way of doing this AB.
