E. REASONS SUPPORTING OBJECTION(S): _____

See attached sheet

E. REASONS SUPPORTING OBJECTION(S):

The six acres irrigated under this water right is classified with soil described as Hondoho Arbone Gravely Silt Loam and has a very low water holding capacity. In fact, the Soil Conservation Service has recommended that an increase of at least 50% (.02 CFS to .03 CFS) is needed to adequately irrigate this property. The enclosed letter (1) from David L. Curtis, District Conservationist, is provided for your review. A map from the Soil Conservation Service is also enclosed which includes the acres irrigated by this water right (enclosure 2).

The IDWR should also consider that an increase from .02 CFS to .03 CFS was allowed Curtis Dunn under right number 29-4101A based on the same soil conservation evaluation, letter, and map (enclosure 3).

All of the Walker Creek water users, including Mr. Dunn, are within the boundaries of the map provided by the Soil Conservation Service and all have the same type soil described above.

Dear Keith:

As a follow-up to your question on the Hondoho gravelly silt loam, this soil has a lower water holding capacity than the average silt loam soil in Bannock County. As stated in our letter dated March 2, 1988, its water holding capacity is 4.8 to 6.6 inches, while the average silt loam is 11.4 to 12.6 inches of water.

Thus, if the State of Idaho, Department of Water Resources typical allocation per acre is .02 cfs per acre on average soils, then to have adequate water as stated above, an increase of 50% is needed.

The above information applies to all soils in your area labeled Honodaho gravelly silt loam.

Sincerely,

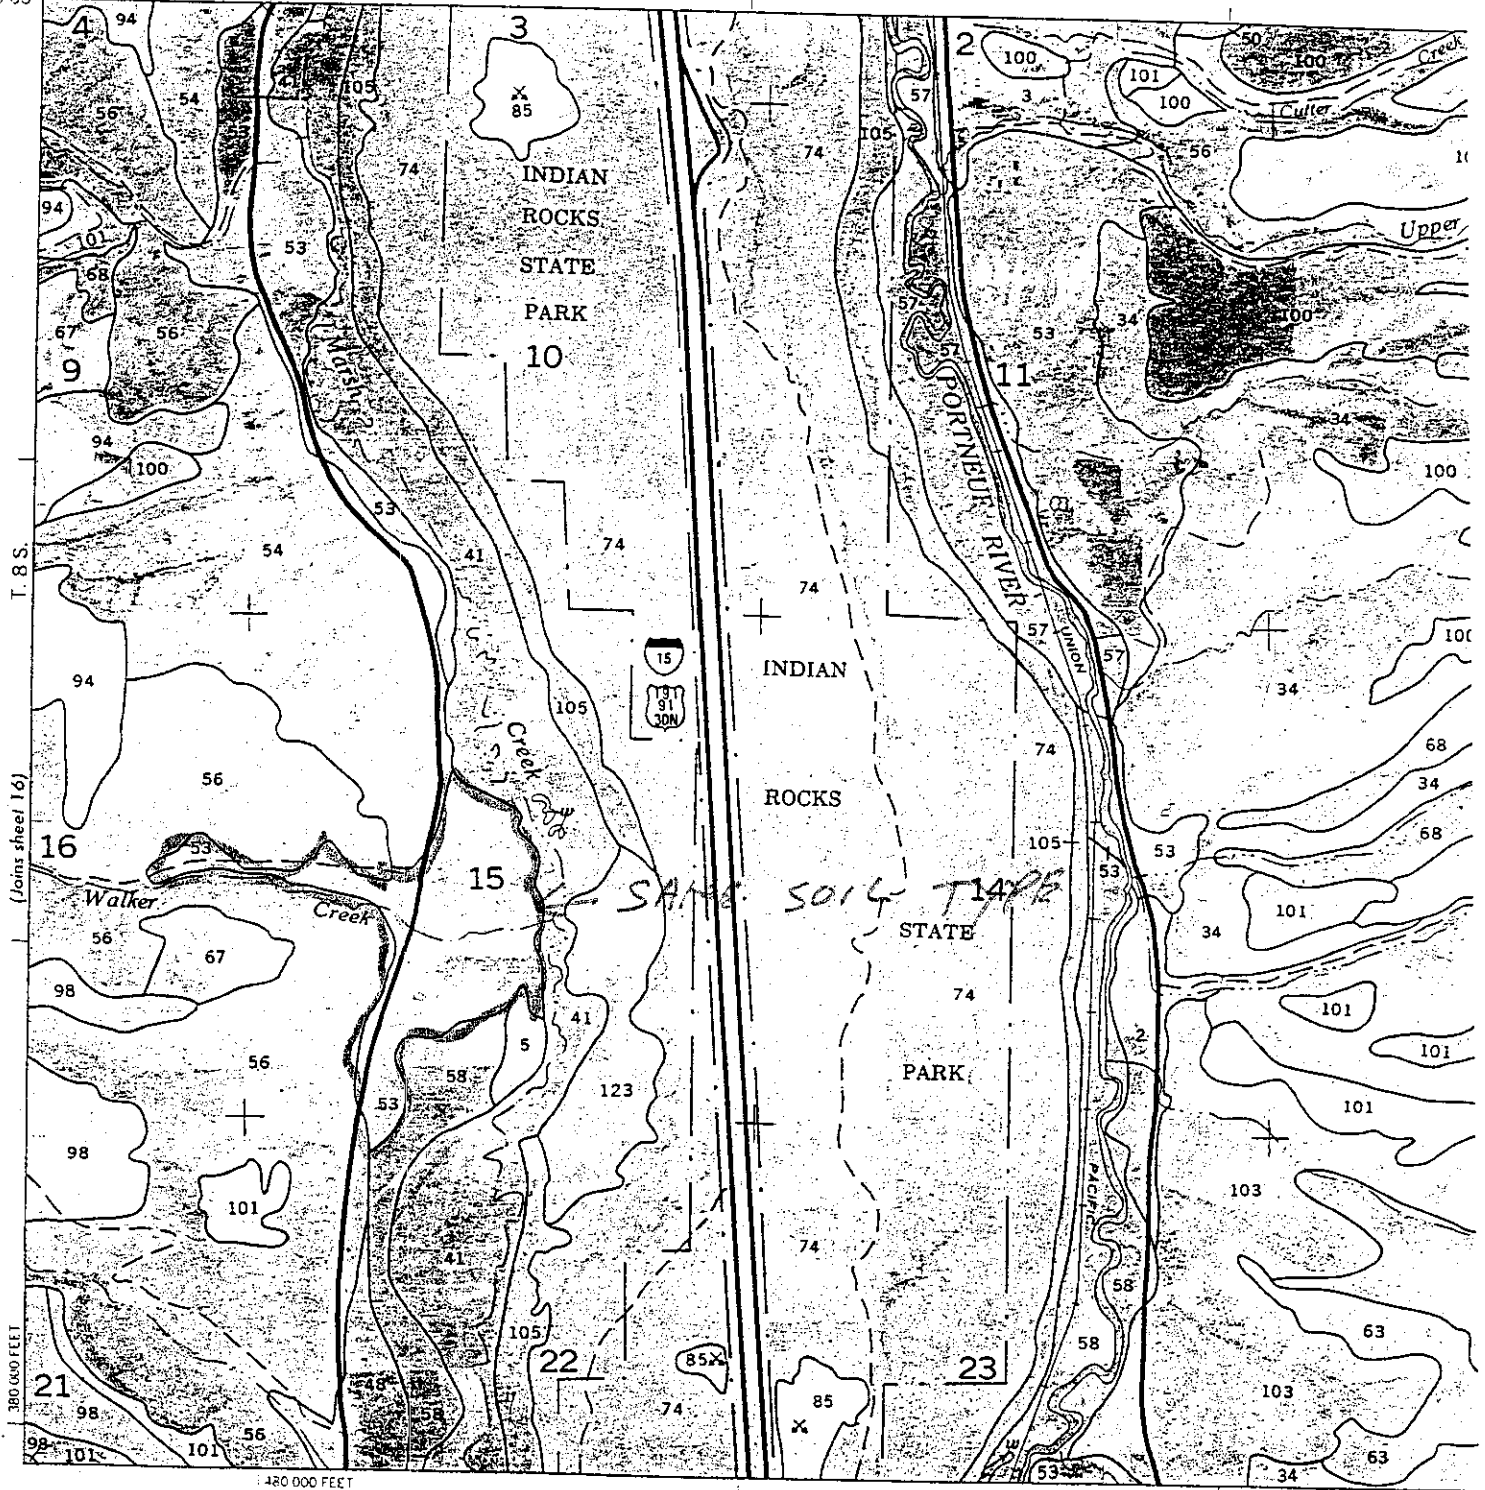

David L. Curtis
District Conservationist
