

Ditch - now abandoned due to Family Feud. Was in use in 1987 for domestic and irrigation use. no longer ☐ and he has no desire to pay the water right for this ditch.

pod in sellars creek only uses during high water - uses for flood control to prevent erosion in ditches (stream bed washing away)
ground uses lots of sub-irrigation due to pond (springfed) and beaver.

Site investigation on 10/15 - no active irrigation and the ground was still saturated w/ standing water.

Pond - 2 outlets - head gates - used for flood control. Pond is used for recreation and stockwater. is about 4 feet deep.

Pond had filled in but in about 1993-95 it was cleaned to current depth. previously had been about 7 feet deep.

drains to Sellers Creek. is one of the sources of Sellers creek.

2nd photo of pond
