RE: Furey Lane Diversion Project

Dear Mr. Rudeen:

This letter is written in response to your correspondence dated June 9, 2004. In preparing this response I have conferred with Roxanne Brown, our Lead Investigator for the adjudication of the Pahsimeroi River Basin; Tim Luke, Supervisor of Water Distribution; and Chris Bromley, our Deputy Attorney General assigned to this basin.

As you are aware, the Idaho Department of Water Resources (IDWR) is presently conducting our investigation of irrigation water rights in the Pahsimeroi River Basin, with the intent of submitting a Director's Report of these water rights to the Snake River Basin Adjudication Court during the summer of 2005. Accordingly, many questions about irrigation water rights in the Pahsimeroi River Basin are still in the investigation stage. However, I will provide preliminary responses to the two issues raised in your letter.

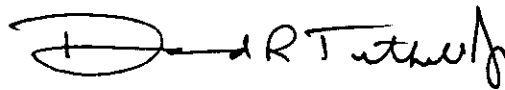

The first issue regards the point of measurement for water rights diverted at the Upper Diversion, as described in your letter and enclosed map. I understand from your description that the location of measurement has historically been at a location about a mile down the ditch from the diversion from the Pahsimeroi River. It is understandable that the most practical location for the measurement structure could be at this location. However, to be in conformance with proper delivery of water rights diverted from the Pahsimeroi River, measurement at this location should take into account the loss in the ditch between the river and the measuring device. For example, if the loss in the ditch is ten percent, the flow measured at the device should be ten percent less than the flow that is available for diversion from the river. Placing a measuring device down the ditch does not add to a water right. Even if the ditch loss has been disregarded in the past, this loss should be taken into account in the future. This guidance is consistent with the tenet that a water right provides for a rate of flow to be diverted *from the source*, not the rate to be measured at a location down the ditch.

June 25, 2004

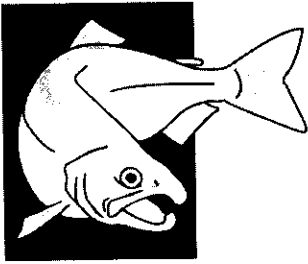

The second issue relates to a proposal by the landowners to move the point of diversion for Sulphur Creek Livestock's decreed water right no. 73-157 from the lower diversion to the upper diversion through the IDWR administrative transfer process. You indicate that the landowners desire to continue to measure the diversion at the lower diversion location. The acceptability of this proposal is difficult to pre-judge. Applications for transfer are advertised, and undergo a directed review to determine if changing points of diversion injures other water rights. Accordingly, my recommendation is to delay the construction of new diversion works until the point of diversion transfer has been approved.

If any party has information that might serve to change the responses in this letter, such information is invited. Accordingly, please feel free to contact me in this regard.

Sincerely,

A handwritten signature in black ink, appearing to read "D R Tuthill Jr", with a stylized flourish at the end.

Subject: Furey Lane Diversion Project

Dear Mr. Tuthill;

The Upper Salmon Basin Watershed Project (USBW) the irrigators involved with the Furey Lane Diversion Project to contact the Idaho Department of Water Resources to clarify the possibilities for this project. Two issues exist that the landowners involved with the project are uncomfortable with. The two issues involve where the point of diversion and/or the point-of-measurement for the water rights for these landowners will be after adjudication. We would like your help resolving these issues.

The Furey Lane Diversion Project will improve fish passage in the Pahsimeroi River by replacing two gravel push-up diversions with fish passable V-weir diversions, lockable headgates, and water measuring devices. The Idaho Department of Fish and Game's Anadromous Fish Screen Shop will install fish screens after fish passage is reestablished in the river. By improving these diversions the irrigators will also gain the ability to control the amount of water they divert and pass by their diversions.

The landowners feel their historical point of measurement has been established at the First Split in the Ditch, although their point of diversion is at the Upper Diversion (see attached map). The first issue is that the landowners are concerned that by installing this project IDWR will force them to move their point-of-measurement from the First Split in the Ditch to the Upper Diversion. They believe this will add an additional mile of ditch loss that wasn't incurred historically. The irrigators feel they would be best served if they can continue to divert and measure their water as they have in the past and are doing now. The water rights of concern and other associated water rights are listed in an attached summary.

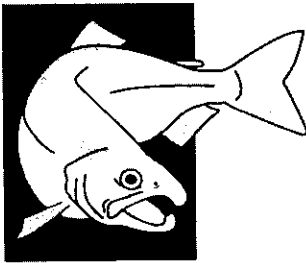

The second issue is specifically related to how the project will be designed and installed. Historically, Sulphur Creek Livestock diverted decree 73-157 at the Upper Diversion then injected it into the river after the First Split in the Ditch where it was rediverted at the Lower Diversion. The landowners propose moving Sulphur Creek Livestock's point of diversion for decreed water right number 73-157 to the Upper Diversion, through

the IDWR administrative transfer process but allowing him to measure at the point of diversion (Lower Diversion) listed in the decree. Doing this would allow the water being used by the irrigators to remain in the same ditch longer and would decrease the amount lost to conveyance. If Sulphur Creek Livestock's water must be left in the river until it reaches the decreed point of diversion, the irrigators feel there would not be enough water for any of them.

The Upper Diversion is the location of the current point-of-diversion for decree numbers: 73-10061, 73-10071, 73-152A, and beneficial use claim: 73-10100. The point-of-diversion for decree number 73-157 and license number 73-2155 is currently the Lower Diversion.

Your assistance in resolving these issues would be greatly appreciated, as the project cannot continue until it is clear on how the water rights involved in the project will be administered in the future. Please respond by Wednesday, June 23.

Sincerely;

Carl Rudeen
