Talked with Vaughn Hunter re: 25-262.
He said that to his knowledge the acreage east of the drain, which he referred to as "spring creek," was watered with Long Island canal water. He had no knowledge of that land being irrigated with Spring Creek water. It appears that there was no way to deliver Spring Creek water to that ground without the benefit of a pump.

25-262

Met with Dee Stoker, Vaughn Hunter shares ownership with Dee Stoker and possibly others. Gave Dee a change of ownership form. Changed address in database from Roberts to Lewisville.

Observed Pond. Claimed ground on east side of creek appears unirrigated for many years. Dee's son, Scott, confirmed that they didn't own that land. Claimant says that SWSW of sec 2 and NENW of sec 11 are also watered with this WR. However WR database shows only canal water in those QQ.

POD is same as 258-C, Roxine Stone. 5 users on this pump.

This summer, Dee installed a portable pump in a creek which I believe is used as a drain for the Long Island canal. Dee referred to the source as Spring Creek, but it has no name on USGS quad map. He does not appear have a WR for this diversion.
