	)	FOR WATER RIGHT 31-07605

I. FINDINGS OF FACT

A claim for this water right was filed in the Snake River Basin Adjudication. The Director of the State of Idaho Department of Water Resources (IDWR) examined the water system and investigated claims for Basin 31. The *Director's Report* contained a recommendation for the elements of this water right.

An *Objection* was filed to the *Director's Report*. The *Objection* was resolved with a *Notice of Completed Administrative Proceeding*. The *Notice of Completed Administrative Proceeding* contained language referring to an acre foot per year limitation over a rolling five year period. The *Notice of Completed Administrative Proceeding* also included language describing an early and late irrigation season:

The use of water for irrigation under this right may begin as early as April 1 and may continue to as late as October 31, provided other elements of the right are not exceeded. The use of water before April 15 and after October 15 under this remark is subordinate to all water rights having no subordinated early or late irrigation use and a priority date earlier than the date a partial decree is entered for this right.

IDWR submitted a *Supplemental Director's Report* and a *Substituted Supplemental Director's Report* in subcases 31-7605, 31-7607, 31-7608, 31-7613 and 31-7616 that further explained both the rolling five-year volume limitation and the early and late season of use.

A. AVERAGE OVER A ROLLING FIVE -YEAR PERIOD

The *Substituted Supplemental Director's Report* states that the rolling five-year period limitation resulted from administrative action by IDWR following a complex series of applications for new water rights, transfers, and amendments to transfers. During IDWR's administrative proceedings, settlement negotiations between the claimant and administrative protestants resulted in a volume limitation that is further limited to a certain average over a rolling five year period. For example, the *Substituted Supplemental Director's Report* explains that this language means that the Department totals the pumped volumes for the previous four years and subtracts that quantity from 37,700 acre-feet, the maximum allowable pumpage over a five year period. The remaining quantity is the maximum annual amount that can be pumped in that year and not violate the constraint on the average pumpage over any five year period. *Substituted Supplemental Director's Report* p. 5. This Special Master concludes that the volume limitation should be included in the partial decree for this water right.

B. EARLY AND LATE SEASON IRRIGATION

This water right was previously licensed by IDWR. As with many licensed water rights, this right has an irrigation season of use that is shorter than the standard irrigation season IDWR recommended in the surrounding area. Therefore, the *Director's Report* recommends an additional early and late season of use consistent with the standard season of use in the area. The language regarding early and late season irrigation is included to describe the extended season and to provide protection to existing water rights. This Special Master concludes that the early and late season irrigation language should be included in the partial decree.

II. CONCLUSIONS OF LAW

Therefore, based on the file and record for this subcase, IT IS RECOMMENDED that this water right be decreed with the elements set forth in the attached *Special Master's Recommendation for Partial Decree*.
