FOR WATER RIGHT 31-07608

A. AVERAGE OVER A ROLLING FIVE -YEAR PERIOD

The *Supplemental Director's Report* states that the rolling five-year period limitation resulted from administrative action by IDWR following a complex series of applications for new water rights, transfers, and amendments to transfers. During IDWR's administrative proceedings, settlement negotiations between the claimant and administrative protestants resulted in the volume limitation that is now recommended by IDWR. "The combined use of rights listed below shall not exceed 7.540 AF per year when averaged over a rolling five year period." The *Supplemental Director's Report* explains that this language means that "the average over any five year period shall not exceed 7.540 acre-feet per year and thus the total gross pumpage period shall not exceed 7.540 acre-feet per year and thus the total gross pumpage shall not exceed 37,700 acre-feet of water over any five year period." *Supplemental Director's Report* p. 4-5. This Special Master concludes that the volume limitation should be included in the partial decree for this water right.

B. EARLY AND LATE SEASON IRRIGATION

This water right was previously licensed by IDWR. As with many licensed water rights, this right has an irrigation season of use that is shorter than the standard irrigation season IDWR recommended in the surrounding area. Therefore, the *Director's Report* recommends an additional early and late season of use consistent with the standard season of use in the area. The language regarding early and late season irrigation is included to describe the extended season and to provide protection to existing water rights. This Special Master concludes that the early and late season irrigation language should be included in the partial decree.

II. CONCLUSIONS OF LAW

Therefore, based on the file and record for this subcase, IT IS RECOMMENDED that this water right be decreed with the elements set forth in the attached *Special Master's Recommendation for Partial Decree*.
