SYSTEM DESCRIPTION: THE CANAL CO. OWNS AND OPERATES OAKLEY RESEVOIR & THE CANAL SYSTEM. OAKLEY RESERVOIR STORES APPROX.

75,000 ACRE FEET OF WATER BEHIND OAKLEY DAM WHICH IS AN EARTHEN DAM WITH CONCRETE CORE. THE DAM IS APPROX. 1100 FT LONG, 150 FT HIGH, 750 FT WIDE AT THE BASE, AND 16 FT WIDE AT THE TOP. THE OUTLET WORKS CONSIST OF A 73 IN STEEL LINED OUTLET TUNNEL THRU THE RIGHT ABUTMENT WHICH DELIVERS TO THE MAIN CANAL. A SPILLWAY ON THE LEFT ABUTMENT IS NOT USED. THE HIGHLINE DIVERSION FROM THE MAIN CANAL IS APPROX. 250 YDS. BELOW THE OUTLET FROM THE DAM. THE MAXIMUM DELIVERY INTO THE HIGHLINE CANAL IS 4.0 CFS. THE MAIN CANAL SPLITS INTO THE EAST AND WEST CANALS APPROX. 1/4 MILE BELOW THE DAM. THE EAST CANAL HAS A CAPACITY OF 160 CFS AND THE WEST CANAL HAS A CAPACITY OF 160 CFS. BOTH OF THESE MAIN DELIVERY CANALS SERVICE THE LANDS VIA NUMEROUS LATERALS AND DITCHES.

THESE CANALS AND DITCHES INTERCEPT COTTONWOOD AND LITTLE COTTONWOOD CREEKS AND UTILIZE THESE WATERS FOR DELIVERY IN THE SYSTEM. THE GOOSE CREEK DRAINAGE BELOW THE DAM HAS BEEN FARMED OVER AND PRESENTLY NO DIRECT CHANNEL EXISTS BELOW THE DAM TO THE SNAKE RIVER. (NOTE THAT IN 1984 A TEMPORARY CHANNEL WAS CONSTRUCTED TO SAFELY PASS FLOOD WATERS FROM THE DAM TO THE SNAKE RIVER BUT PORTIONS OF THIS CHANNEL ON PRIVATE LAND HAVE SINCE BEEN FILLED. THE EMERGENCY CHANNEL CONSTRUCTED TO MURTAUGH LAKE AT

THAT SAME TIME STILL EXISTS.)

***** THE LANDS SERVED BY THE OAKLEY CANAL CO. ARE PRIVATELY OWNED BY THE SHAREHOLDERS OF THE COMPANY. THESE SHAREHOLDERS ALSO HAVE PRIVATELY HELD WATER RIGHTS FROM GROUNDWATER AND OTHER SOURCES WHICH ALSO SUPPLY WATER TO SOME OF THE SAME LANDS SERVED BY THE OAKLEY CANAL CO.

14. Remarks:

SYSTEM DESCRIPTION: THE CANAL CO. OWNS AND OPERATES OAKLEY RESEVOIR & THE CANAL SYSTEM. OAKLEY RESERVOIR STORES APPROX. 75,000 ACRE FEET OF WATER BEHIND OAKLEY DAM WHICH IS AN EARTHEN DAM WITH CONCRETE CORE. THE DAM IS APPROX. 1100' LONG, 150' HIGH, 750' WIDE AT THE BASE, AND 16' WIDE AT THE TOP. THE OUTLET WORKS CONSIST OF A 73" STEEL LINED OUTLET TUNNEL THRU THE RIGHT ABUTMENT WHICH DELIVERS TO THE MAIN CANAL. A SPILLWAY ON THE LEFT ABUTMENT IS NOT USED. THE HIGHLINE DIVERSION FROM THE MAIN CANAL IS APPROX. 250 YDS. BELOW THE OUTLET FROM THE DAM. THE MAXIMUM DELIVERY INTO THE HIGHLINE CANAL IS 4.0 CFS. THE MAIN CANAL SPLITS INTO THE EAST AND WEST CANALS APPROX. 1/4 MILE BELOW THE DAM. THE EAST CANAL HAS A CAPACITY OF 160 CFS AND THE WEST CANAL HAS A CAPACITY OF 160 CFS. BOTH OF THESE MAIN DELIVERY CANALS SERVICE THE LANDS VIA NUMEROUS LATERALS AND DITCHES. THESE CANALS AND DITCHES INTERCEPT COTTONWOOD AND LITTLE COTTONWOOD CREEKS AND UTILIZE THESE WATERS FOR DELIVERY IN THE SYSTEM. THE GOOSE CREEK DRAINAGE BELOW THE DAM HAS BEEN FARMED OVER AND PRESENTLY NO DIRECT CHANNEL EXISTS BELOW THE DAM TO THE SNAKE RIVER. (NOTE THAT IN 1984 A TEMPORARY CHANNEL WAS CONSTRUCTED TO SAFELY PASS FLOOD WATERS FROM THE DAM TO THE SNAKE RIVER BUT PORTIONS OF THIS CHANNEL ON PRIVATE LAND HAVE SINCE BEEN FILLED. THE EMERGENCY CHANNEL CONSTRUCTED TO MURTAUGH LAKE AT THAT SAME TIME STILL EXISTS.)

THE LANDS SERVED BY THE OAKLEY CANAL CO. ARE PRIVATELY OWNED BY THE SHAREHOLDERS OF THE COMPANY. THESE SHAREHOLDERS ALSO HAVE PRIVATELY HELD WATER RIGHTS FROM GROUNDWATER AND OTHER SOURCES WHICH ALSO SUPPLY WATER TO SOME OF THE SAME LANDS SERVED BY THE OAKLEY CANAL CO.

THE WATER RIGHTS OF THE OAKLEY CANAL CO. ARE INCLUDED IN:
A45-00093 A45-00094 A45-00132 A45-00133 A45-02040
A45-12438 A45-12442 A45-12443 A45-12448 A45-12449
A45-12455 A45-12457 A45-12749 A45-12750

THIS CLAIM IS BASED ON A COMBINATION OF LICENSES WITH THE SAME PRIORITY OF USE AND THESE LICENSES ARE:

45-02059 FOR 600 CFS FROM GOOSE CREEK
45-02060 FOR 70 CFS FROM LITTLE COTTONWOOD CREEK
45-02062 FOR 70 CFS FROM COTTONWOOD CREEK
45-02063 FOR 100 CFS FROM BIRCH CREEK
TOTAL 840 CFS

THE WATERS FROM BIRCH & GOOSE CREEK GO DIRECTLY INTO THE DAM AND THEN ARE DELIVERED THRU THE CANAL SYSTEM. THE WATERS OF COTTONWOOD AND LITTLE COTTONWOOD CREEKS ENTER THE CANAL SYSTEMQ BELOW THE RESERVOIR BUT ARE USED BY EXCHANGE THROUGHOUT THE CANAL SYSTEM.

RE: Recommendation of Claim No: 45-2060

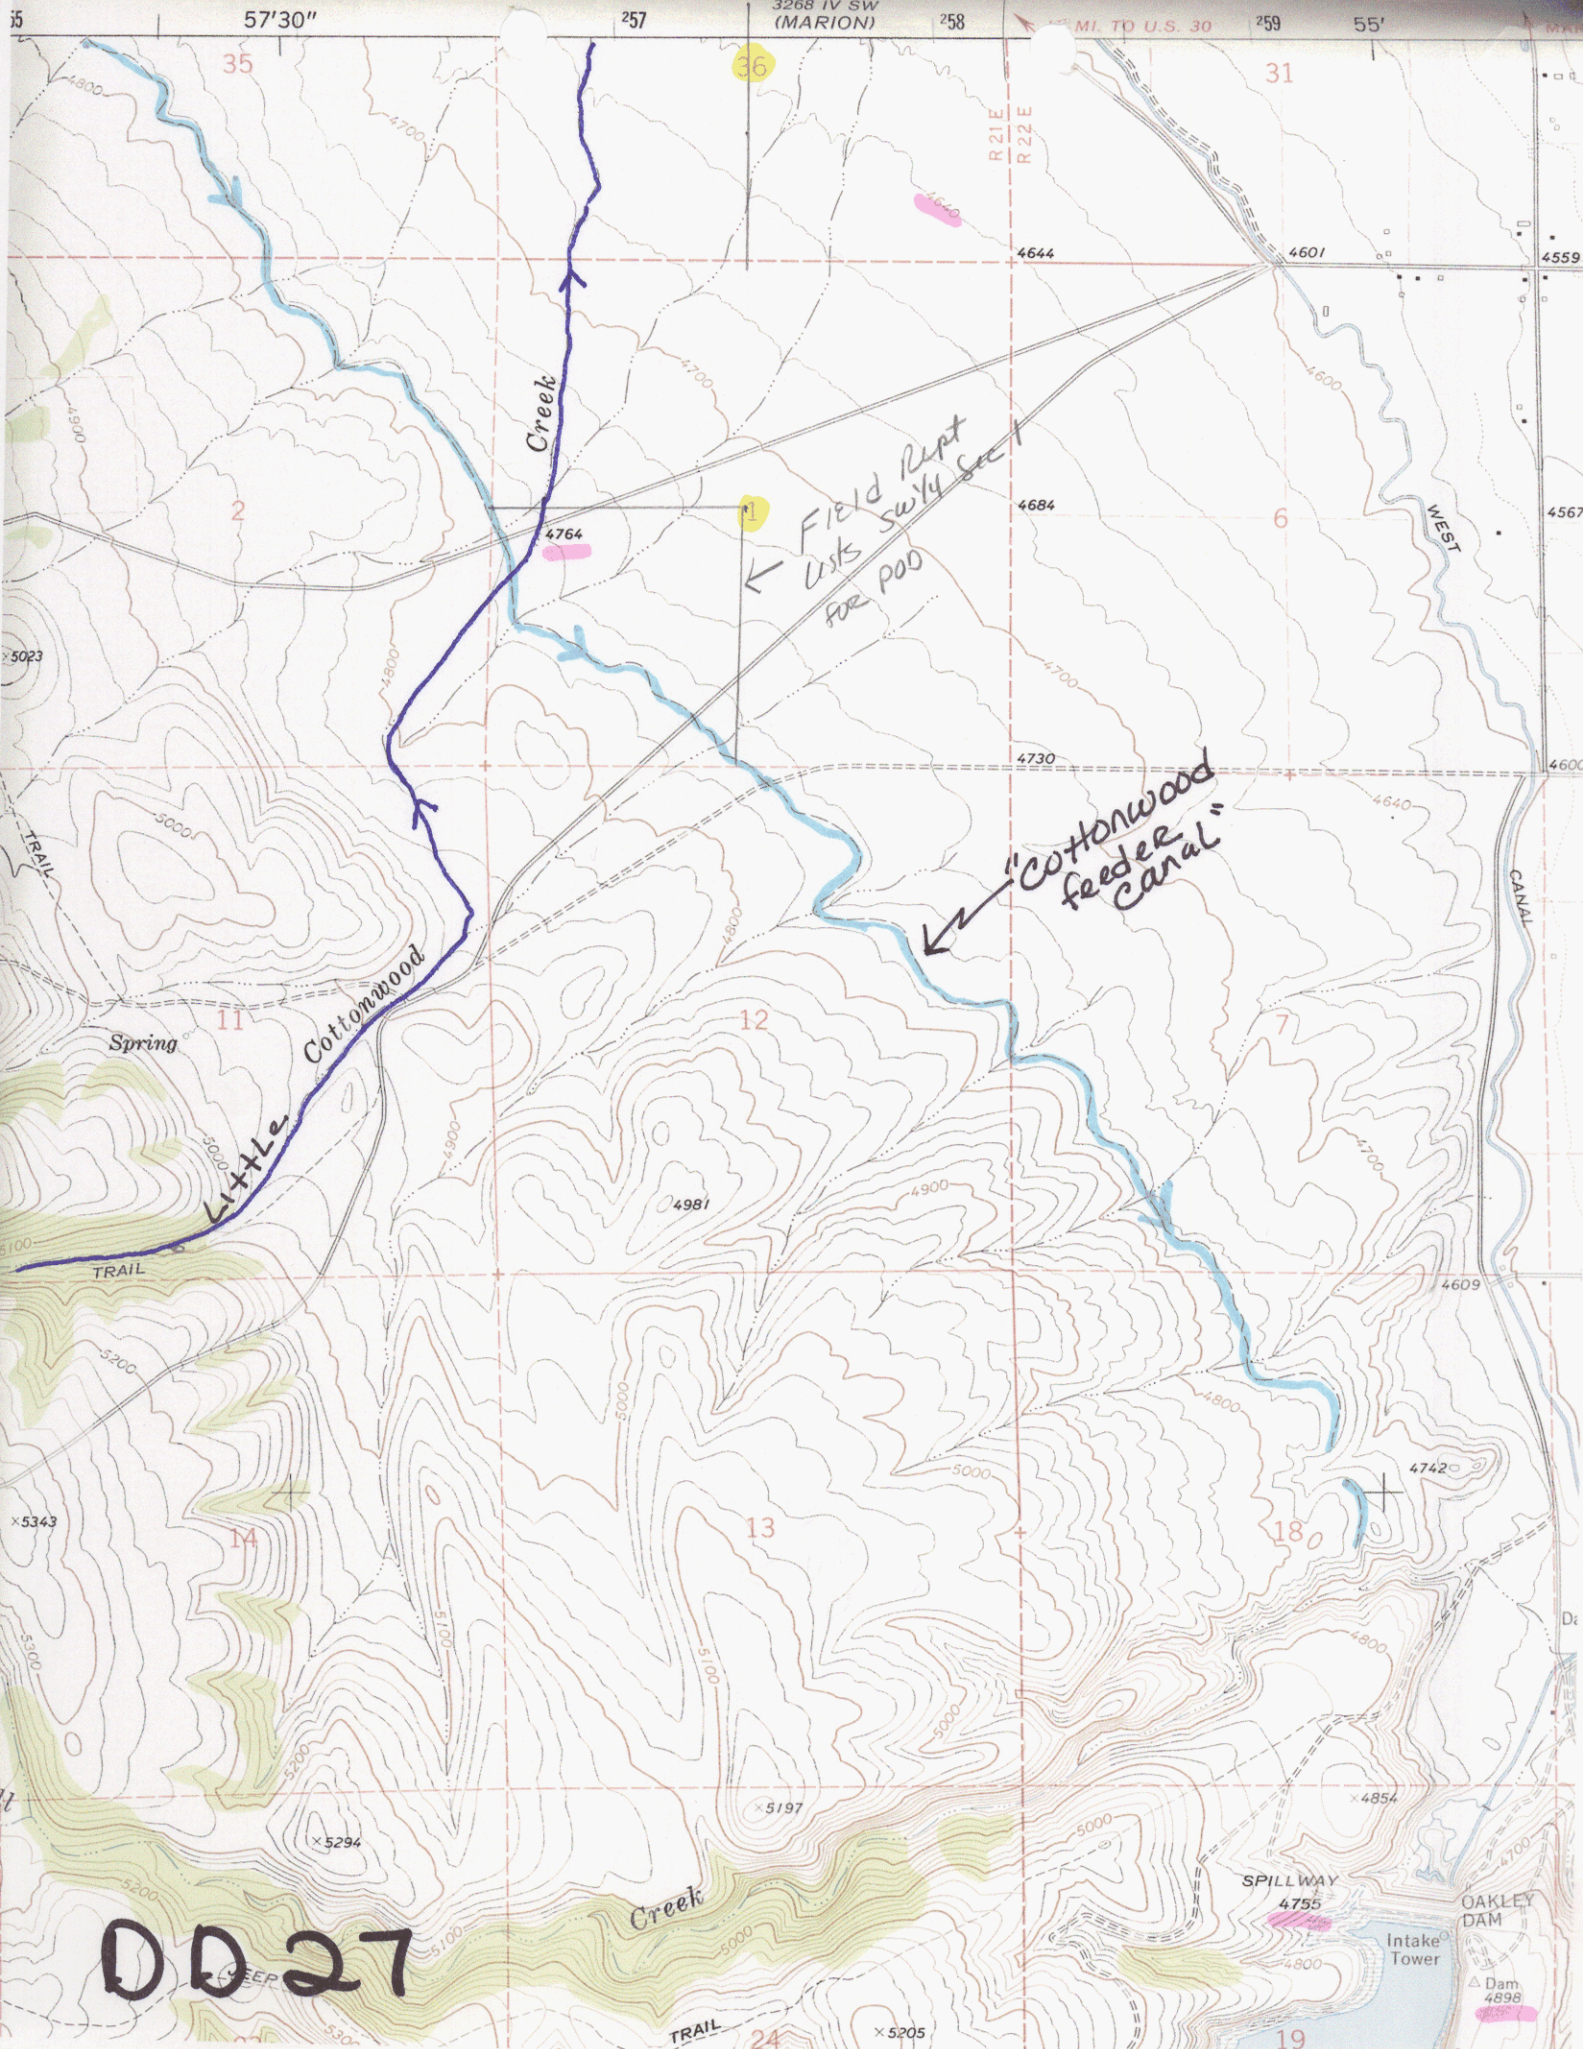

The point of diversion for Little Cottonwood Creek under this right is being recommended in the NENENE Section 36, T13S, R21E, as claimed.

In the SWSWNW Section 1, T14S, R21E, two channels diverge. The USGS quad map identifies Little Cottonwood as the channel flowing from the SWSWNW Section 1, north into a pond located on private land in the SENWNW Section 36, T13S, R21E.

The other channel flows northeasterly and intersects Oakley Canal Company's West Canal in the NENENE Section 36. In 1909 the Canal Company identified a point along this channel as the point of diversion from Little Cottonwood for permit 45-2060 and that point was licensed by IDWR.

At the point where the two channels diverge, Craig Hawker has claimed and been recommended a point of diversion from Little Cottonwood for irrigation of his lands in Sections 19 & 30 T13S, R21E.

Because the actual channel of Little Cottonwood Creek, if it still even exists, is not clear at this time, and to avoid any injury to other water users of the Creek, I believe that the claimed point of diversion should be recommended.

MEMO TO FILE

From: Vikie Hancock

Date: 2/6/2004

Regarding: Oakley Canal Company

Claim Nos: **45-2040** – Goose Creek, 500 cfs
45-2059 – Goose Creek, 600 cfs
45-2060 – Little Cottonwood Creek, 70 cfs
45-2062 – Big Cottonwood Creek, 70 cfs
45-2063 – Birch Creek, 100 cfs

The above five claims are all based upon licenses issued to Oakley Canal Company for use of water for irrigation utilizing storage in the Goose Creek (Oakley) Reservoir. The first application for permit, 45-2040, was filed in March 1908. The four subsequent permits were filed a year later in March 1909. Note that a sixth license, 45-2061, was issued on Basin Creek, concurrent with those listed above. That license is listed as abandoned in the water right database.

A review of the map found in file 45-2040 shows that, under these five licenses and by use of the reservoir, additional lands were proposed for development beyond those already irrigated under the numerous private rights on Goose Creek dating from the late 1870's and early 1880's. The reservoir and canal system was a Carey Act project.

Place of Use

45-2040 was licensed in November 1917 for 26,905.86 acres, and included a land list of acres irrigated. The land list actually totals 27,716 acres. The acre figure on the license agrees with the Disposition of Holder which included a land list supposedly totaling 26,905.86 acres. I did not compare the lists at this point, and in any case it would seem that in the SRBA recommendation, this right would be limited to 26,906 acres within the current service area of Oakley Canal Company.

45-2059, 45-2060, 45-2062 & 45-2063 were all license in October 1923 for "the irrigable portions of 25,000 acres of land covering 634...legal subdivisions situated in and being a part of the Twin Falls Oakley Land and Water Company's Carey Act Project". Three different field reports in 45-2059 refer to *the land list attached* and two different land lists are included in the file. The one that appears to have been filed with the Disposition of Holder lists 24,974.19 acres. A comment in the electronic water right record of 45-2059 states that the POU equals 24,974 acres. An electronic comment in water right 45-2060 states there are 25,000 acres. Correspondence in the file indicates that the sources were licensed on a shared place of use and were assessed one fee as such, even though different numbers of acres were applied for on the

permits: 45-2059 = 60,000 acres; 45-2060 = 25,000 acres; 45-2062 = 15,000 acres; 45-2063 = 15,000 acres.

In the water right database, the POU acres were data-entered only into 45-2059 and then just referred to in 45-2060, 45-2062 & 45-2063. The POU for these rights overlaps the licensed place of use of 45-2040 - but not exactly. Using our water right database, a POU comparison revealed that some acres covered under license 45-2040 were not included in the later licenses, and also that 1,883 acres covered under the four later licenses were not listed in the first license. Disregarding the difference between the listed acres and the stated licensed acres on 45-2040, and using the actual listed acres for both 45-2040 & 45-2059, the five licensed rights combined cover 29,599 acres according to our water right database. From looking at the map included with application 45-2040, it appears that the licensed rights overlap the lands developed by the early settlers in all but a few fortys, so there may be a different number of combined acres when the older rights are factored in.

Quantity

If the five licenses combined are limited to 29,599 acres then they would normally be limited to a combined total of 591.98 cfs [29,599 x .02 cfs] for irrigation. The total quantity licensed under these five rights is 1,340 cfs, but that would include a right for diversion to storage for 45-2040, 45-2059 & 45-2063.

According to information found in file 45-2059, the stated capacity of the reservoir is 74,350 acre feet in volume.

Purpose of Use and PODs

All five rights were licensed for *Irrigation and Domestic purposes*. The five rights described the stream sources as all being conveyed into the reservoir and re-distributed through the delivery system downstream of the dam, but no storage or irrigation from storage use is listed on any of the licenses. There is, however, some correspondence in file 45-2059 that indicates that the storage component, and how to deal with it as part of a water right, was being discussed at the time of licensing. Remarks included in original combined SRBA claim 45-12442 state that Goose and Birch Creeks are conveyed into the reservoir, but Big and Little Cottonwood Creeks are not. I learned during a field exam done on Big Cottonwood Creek in October 2001 that the conveyance ditch (the Cottonwood Feeder) that was constructed to divert water from Big and Little Cottonwood Creeks around the hill and southeast to the reservoir was found to be impractical soon after construction and is no longer used.

Big Cottonwood is diverted by the water master downstream of the original licensed POD and conveyed almost directly west and into the Oakley Canal system. I propose to not recommend a *storage or irrigation from storage* use for that source, although those uses are included on the SRBA claim.

From the claimed point of diversion for Little Cottonwood, NENENE Sec 36, T13S, R21E, it appears that the stream is now considered to end at the West Canal, or in a ditch close to it. The licensed point of diversion (the same as listed in the application for permit) was located in the SE ¼ of Section 36, and both points indicate that the channel officially identified as Little Cottonwood Creek may have changed over the years (see USGS quad CC77) and may affect the recommended POD legal. A review of USGS quad map DD27 shows that the licensed POD actually would not have enabled conveyance of Little Cottonwood Creek to Oakley Reservoir, however the point of diversion named in the licensing field report would have. It describes the point in Section 1 that Little Cottonwood intersects the old Cottonwood Feeder canal and probably should have been the licensed POD. On paper, and in reality even, there is an accomplished transfer of POD for 45-2060.

There are small ponds or reservoirs located within the canal system that may be used for storage of Little Cottonwood water, but not the volume claimed in 45-12442. Stock water could be added based on the licensed domestic use. I think more information is needed on this source if claimants want more than a right for irrigation.

Goose Creek, and Birch Creek, are both still conveyed into the reservoir and therefore it seems like storage and irrigation from storage would be valid uses on those rights, if it is possible to add them in the SRBA. The licensed POD for Birch Creek is incorrect, and like Little Cottonwood, it wasn't amended from the POD listed on the original application and was probably always incorrect. The 1914 licensing field report agrees with the currently claimed point of diversion in the NW ¼ Section 24, T14S, R22E, but on paper there would be an accomplished transfer of POD. A review of USGS quad DD28 shows that water from Birch can probably also be conveyed directly into the East Canal below the dam.

Season of Use

None of the licenses listed a season of use. The 1914 field report on Big Cottonwood actually states that it is diverted during times of flood flow, and in 2001 the water master told me he delivered it only during those times. I propose to recommend a season of use of 3/15-11/15 for irrigation only for 45-2062.

Little Cottonwood looks to be permanently intercepted and may flow into the canal system year round and used for year-round stock water or storage if either use is substantiated. I believe all other private claims to Little Cottonwood for irrigation and stockwater are diverted upstream of the POD claimed by Oakley Canal.

As mentioned above, Goose and Birch creeks could be recommended for the seasons claimed, if the three uses claimed are recommended.

Dear Sir:-

Relative to the proofs of beneficial use of water made under the above numbered permits on October 10, 1918, would say that a re-examination was made July 13, 1921, by our engineer, Mr. Geo. Carter, and report filed. This report shows all, or parts, of 634 forty acre tracts under cultivation and irrigation. The statutory fees amount to \$634.00 for each permit, in view of the fact that each permit covers the entire list of lands. Upon receipt, therefore, of fees in the sum of \$3170.00, licenses will be issued under these permits.

Very truly yours,

W. G. SWENDSEN,

Commissioner of Reclamation.

8. Submit map on enclosed plat, source of supply, point of diversion, route of ditch or ditches and cross hatch lands to be irrigated. For map see Permit #4731.

Remarks: The works of diversion of the waters of this creek consist of a canal built across the stream on a grade with the bottom of the stream. Flash boards are installed on the lower side of the canal to take care of excessive floods in the creek. The waters of Little Cottonwood are taken through this canal to the reservoir where they are stored and rediverted as needed. The canal diverting this water is known as the Cottonwood Feeder. It also diverts water from Cottonwood Creek under permit #4734.
