Met with Mike Silbetti, son of Russ Silbetti re: additional point of diversion from Eagle Creek. Mike said that Russ commonly used the additional P/D to sub-irrigate his alfalfa field. Photos show P/D and place where canvas dam was placed in order to raise the water table to sub-irrigate. The photos also show washed out areas that resulted from flooding the area in the vicinity of the dam.

Field exam and statements from Bernard Lindstrom and Glade Silbetti seem to support the irrigation of the NENE of section 23 from the aforementioned P/D.
