

25-4092

From WMIS:

P/D A0000335, E0007149 MAIN WELL
N 271854.70
E 666974.50 125 HP 65-75 psi

On 10/17/2001, I measured 1278 GPM.
Installed McGrometer QMTR read 1335 GPM.

10/7/2003 submersible 25HP

Met with Ross Johnson who said they had a lot of problems with this well over the years. They seldom used it during the time that he was here (since 1975), and he thought it was last used in the late 1980's. He recalls that it was sometimes used to flood an arena for ice skating. Well has been abandoned and transferred to main well. Location of abandoned well is:

P/D N 271928
E 667532.

Ross said he would submit EOP and a map of the service area. Ross thought that this well produced about 300 GPM.
