Talked with claimant regarding storage facility. The average depth in the facility is 4 feet, but Clifton believes that the installation of the dam raised the depth only 2 feet above what would have been the water level without the dam. At peak spring flows, the facility can fill in 2 days per claimant,

$$28 \text{ AF} \div 2 \text{ DAYS} \div 1.9835 = 7.06 \text{ CFS}$$
