P/D from Snake River

Met w/ Dean Boyce. He corrected POU map. I made further corrections based on my field exam. Dean said that the acreage in section 3 was not irrigated until after the transfer #240. Before the transfer ground in NENW of section 2 was being irrigated w/ Spring Creek water. That QQ can also be irrigated by Long Island Canal shares carried via the Eames lateral ditch.

The ground in the NESE of section 3 has been irrigated from the river pump since shortly after the transfer. The ground in the NENW of section 2 which was formerly irrigated by Spring Creek water has been irrigated with a PTO pump from a spring for 40 years according to claimant. However that P/D has not been claimed. See photo for GPS coordinates.

It appears that an enlargement of about 16 acres has occurred here.
