	)	WATER RIGHT NOS.: 74-12432 AND
	)	74-14831
	)	(FORMER PWR 107)

I. PROCEDURAL BACKGROUND

Claims were filed by the United States Bureau of Land Management for the above listed water rights. The United States originally claimed these rights under both state law and as a federal reservation. The state-based portion of each right was investigated by the Idaho Department of Water Resources ("IDWR") and reported in a *Director's Report*. IDWR did not investigate the federal reservation theory because those are based on federal law. I.C. § 42-1411A.

Objections were filed by the State of Idaho on February 23, 1999. The State of Idaho filed a *Status Report on State's Objections in Basin 74 and 75* in which it withdrew its *Objections* on December 16, 2003. An evidentiary hearing was held on January 28, 2004. The United States Bureau of Land Management withdrew the federal basis for these claims and opted to pursue these rights solely under the state basis. The United States Bureau of Land Management submitted an *Affidavit of Alan R. Bittner*. (74-11014 *et.al.*)(August 29, 2003)(hereafter *Bittner*)

II. STANDARD OF REVIEW

The United States claimed these rights under both federal and state law. The United States elected to go forward with these rights under the state basis. The state-law claims were

investigated by IDWR and recommended in *Director's Reports*. Recommendations in *Director's Reports* have *prima facie* weight as set forth in I.C. § 42-1411(4)-(5). Where the *Director's Report* draws a conclusion as to an element of a water right, the *prima facie* weight afforded the *Director's Report* confers a presumption that sufficient proof has been made to prevail on the issue, absent competent evidence to the contrary. If rebutted, the presumption disappears, and the party with the benefit of the presumption retains the burden of persuasion on the issue. *State v. Hagerman Water Right Owners*, 130 Idaho 736, 947 P.2d 409, 418 (1997).

III. FINDINGS OF FACT ON ELEMENTS

A. Ownership of the Water Right

These water rights were claimed by the United States Bureau of Land Management. IDWR investigated the ownership element of these rights. The *Director's Report* concluded that the owner of these water rights is the United States B.L.M. There are no objections to ownership. Therefore, the United States is the owner of these rights.

B. Priority Date

These water rights were claimed by the United States with early priority dates for the state basis. IDWR investigated, and the *Director's Report* concluded that the priority date for these rights was 1/01/1876 for 74-12432 and 8/16/1908 for 74-14831. However, the *Affidavit of Alan R. Bittner* shows that the predecessor owners of these rights received U.S. patents on later dates. A United States Stock Raising Homestead Entry Patent was issued for 74-12432 on 10/20/1930. A United States Homestead Entry Patent was issued for 74-14831 on 1/07/1918. The United States subsequently acquired these water rights. Thus, the conclusion contained in the *Director's Report* for the earlier priorities was rebutted by the *Affidavit of Alan R. Bittner*. Therefore, the priority dates for these rights are 10/20/1930 for 74-12432 and 1/07/1918 for 74-14831.

C. Source

The claims assert various sources for these water rights. IDWR investigated the source element for each right. The *Director's Report* concluded that the sources for these rights were as claimed. No objections were filed to the source element. Therefore, the sources for these rights are those recommended in the *Director's Report*.

D. Quantity

The quantity claimed for these water rights is 13,000 gallons or less per day. The *Director's Report* for these rights recommended a flow rate of .02 cfs with a volume limitation of

13,000 gallons per day. Therefore, the quantity recommended in the *Director's Report* is confirmed.

E. Point of Diversion

Each claim asserted a point of diversion that was expressed with a legal description. In addition, IDWR investigated the point of diversion element for each right under the state basis and submitted a *Director's Report*. The *Director's Report* for these rights concluded that the points of diversion were as claimed. Therefore, the points of diversion recommended in the *Director's Reports* are confirmed.

F. Purpose of Use

The claimed purpose of use for each of these rights is "stockwater." The United States asserted that there is sufficient water at these sites for consumptive use by livestock. *Bittner* at 4, ¶ 7. In addition, IDWR investigated these rights and concluded that purpose of use is "stockwater." Therefore, the purpose of use is "stockwater."

G. Period of Use

The claimed period of use for each of these stockwater rights is January first to December 31st of each year. IDWR investigated the period of use element and submitted a *Director's Report* that concluded that period of use was year round. The period of use for each water right is year round.

H. Place of Use

Each claim asserted a place of use that was described by a legal description. In addition, IDWR investigated these rights under the state basis. The *Director's Report* for these rights concluded that the places of use were as claimed. Therefore, the place of use for each water right recommended in the *Director's Reports* is confirmed.

IV. CONCLUSION

Therefore, based on the files for these subcases and the record contained therein, IT IS RECOMMENDED that these water rights be decreed with the elements set forth in the attached *Special Master's Recommendations for Partial Decree*.
