Re: Alacano and Morris properties, Elmore County, Idaho

Mr. Sorensen,

RECEIVED

FEB 28 2004

WATER RESOURCES
WESTERN REGION

The following report (and accompanying sketch) shows the results of our area calculations. We have also included a brief explanation of our method in determining the reported acreage.

Sections 8, 9, and 15 are considered 'regular' Sections. That is to say they are in the interior of the Township, and are surveyed in a very standard fashion. In our calculations we used standard Survey methodology. The Last line to be measured would have been the Northerly boundary of the Northwest $\frac{1}{4}$ of each Section. For area calculation purposes, we placed the error noted within the record data along that line.

Sections 3 and 4 are in the Northern tier of Sections within Township 6 South, Range 9 East. The original Surveyor would have measured along the Westerly Boundary of Section 3 first, attempting to end his line on the North Township Boundary. The monument set would be considered a 'closing corner', and would control for direction only. The Westerly and Northerly boundaries were adjusted for distance accordingly.

It should be noted that a Boundary Survey in the field would reveal a different result. Thus, the areas in this report are uncertifiable. Mis-closure errors in the records obtained from Bureau of Land Management ranged from under one foot to over 30 feet in one-half mile.
