Dear Mr. Olenichak;

Thank you so much for taking time to answer all my questions on the Claim forms I sent to Art Larson. I feel much more comfortable about submitting the Claims to Water Rights since becoming more knowledgeable. I also appreciate your filling out the documents herewith submitted. I'm sure that has saved us both time, and for me, anxiety as well!

I do have one last question regarding well #4. Since the permit approved 0.06 cfs., is it not possible to increase the the water claimed to that amount now, simply by paying an additional fee on the field examination? Or if not now, at some future time, without need to submit a new permit application? (Whoops! Thats two!) I have no idea why the full amount was not claimed unless the I failed to understand the fee paid prior to the field examination would set the limit.

My concern is over how much water is used by 100 to 150 people plus lawns. That's what we run on our busiest weekends in the RV Park, and it's the peak we must consider since we have no storage tank.

If the claim can be changed, you have this letter as my request to do so, or you can return the form to me to initial or correct. If a new ^{Permit} application is necessary, please file the claim as is.

Yours truely,

A. P. Anderson
