3.

This particular property has over 5 acres with a 26,000 sq. ft., building, which is supported by a private well. In 1975 Hicks International, Inc., built this building, was zoned and used as heavy industrial. In 1989 another company purchased this property. This company manufactured potato sorting machines and accessories which included fabrication, welding, testing, painting and other work associated with manufacturing equipment. Other departments included machinery cleaning and wash down area to prepare for painting. This particular company employed 30-40 employees in which the private well was used for various situations.

The manufacturing company was closed in 1999 and was purchased by Bob & Mary Anderson with our intentions to keep as heavy industrial use in hopes to lease to another manufacturing company. The paint booth is still operable and will still use a fair amount of water alone. Upon purchasing this property, (which was from bankruptcy) we have found no records associated with the private well and the Department of Water Resources nor records from the previous owners.

As new owners we want to make all records current and to register this private well properly.
