DO

The west well was originally used as a water source for an oil well. It is over 2000 feet deep.

The east well has become the main well. It is just over 200 feet deep. However the west well is still used.

at the west well there is a pit and a relief pump, at one time the well water, and water from horseshoe were commingled and pumped from the pond. That is no longer done, but the pump is still there, & the pit is still there.
