

7/30/02 1800 hrs. Met with CLAIR MONSON, Counsellman
From City of Animo. CLAIR is in charge of the Municipal
Water system. We traveled to Chattanooga Springs (AKA
Arkansas Springs). CLAIR explained the system of
collection (underground) pipes and showed me the
HOBOBOX and further commented that when the
collection system worked (now) they had water
flowing out the overflow. However, about $1\frac{1}{2}$
years back the springs seemed to move down-
slope and the collection system no longer works.
The City of Animo is trying to pass a bond to re-
build the city water system and the springs have
slid down the priority list.

The City still wants to keep the water right
in hopes they can reconstruct the system.

No measurement was taken and the city does
not know records.

Recommended as claimed - since there are no
other competing claims on the source or the
unnamed stream flowing from the site
