My Commission Expires 22 Aug 91

14. Remarks: Amended filing

These amended remarks make corrections to Attachment "A" and the remarks in the original filing. Water from the Crab Creek Branch of West Camas is diverted in SWNWSE of Section 26, T13N,R38E, and injected into Crooked Creek within the NWSWSE of Section 26, T13N,R38E. Water is then rediverted from the channel of Crooked Creek within the NESWNE and the SWNESE of Section 35, T13N,R38E; theSWNWNE (lot 2) and SESESE of Section 2, T12N,R38E; and the NENENE of Section 11, T12N,38E. The only difference between this amended filing and the original filing is that two corrections and one addition were made. The POD in Section 26, T13N,R38E in the original filing was incorrectly located as was the injection point into Crooked Creek of West Camas water. Also one rediversion from Crooked Creek was added. An amended map is also included in this amended filing.

C. CLAIMANT OF WATER RIGHT AS LISTED IN DIRECTOR'S REPORT

Name: Margaret Hagenbarth, David J. Hagenbarth, James F. Hagenbarth

Address: P.O. Box 1128
Dillon, MT 59725

D. We object to the following elements as recommended in the Director's Report:

1. **Points of Diversion:**

There are two (2) primary points of diversion for this water right and they are located in the SWNWSE of Section 26, Township 13N, Range 38E, Clark County, and the SWNWNW of Section 36, Township 13N, Range 38E, Clark County. The point of diversion listed on this water in the NWNW of Section 22, Township 13N, Range 38E, Clark County, is a point of injection. In addition, a point of redirection in the NWSWNW of Section 1, Township 12N, Range 38E, Clark County, needs to be added to this water right.

E. REASONS SUPPORTING OBJECTION:

The primary points of diversion in Sections 26 and 36, as set out above, are the two points of diversion recognized in Sauve v. Abbott et al., Case No. 639, U.S. District Court, District of Idaho, Eastern Division (1930). The points of diversion in Sections 26 and 36 are used to divert water from West Camas Creek into the head of the Hump Ditch which conveys water to the place of use.

Crab Creek is a branch of West Camas Creek. The Recommended water right indicates that the point of diversion is in Section 22, T13N, R38E, Clark County. The diversion structure in Section 22 merely assists in the delivery of West Camas Creek water into the Crab Creek branch of West Camas Creek for diversion into the Hump Ditch in Sections 26 and 36.

Rediversion of water occurs in Section 1, T12N, R38E. In the late 1960's, the county dug a gravel pit in the channel of Crab Creek in the NW of Section 1. The old channel of Crab Creek was abandoned and the Hump Ditch was used to carry the water in a southerly direction past the gravel pit. At a point south of the gravel pit, the water can either be put back down the channel of Crab Creek or continue down the Hump Ditch for irrigation of land in Section 12. It is this point south of the gravel pit which should be included as a point of redirection in Section 1.

The remainder of the recommended points of injection and points of redirection for this water right are accurate.

*Add STOCKWATER
JFH*

1. Describe the portion of the proposed recommendation with which you disagree (e.g priority date, period of use, source):

Points of Diversion-Points of Rediversion

2. Describe the changes you wish to make in the proposed recommendation:

1) Need to add as POD: 13N 38E S36 SWNNW

2) Need to add as PORD: 12N 38E S1 NWSWNW

3) Need to clarify that the primary PODs are: 13N 38E S26 SWNWSE & S36 SWNNW

3. Give a brief explanation as to why you disagree with these portions:

1) This POD in S36 is one of the two PODs in the Suave Decree that diverts West Camas water onto the place of use. The delivery system has not changed from this point upstream since the Decree date.

2) In late 1960s the county dug a gravel pit in the channel of Crab Creek in the NW of S1, 12N 38E. The old channel of Crab Creek was abandoned and the Hump Ditch was used to carry the water from the NWNW of S36 to south of gravel pit in the SWNW of S1. At this point water is diverted back into the Hump Ditch to service land in Section 12.

3) The Recommendation recognizes POD in S22 as primary. This is not correct and not supported by the decree or testimony during the hearing. There has been no changes in the delivery system upstream from the POD in S36 since the Decree date. Crab Creek is a branch of West Camas as determined in the hearing and identified on old maps. The structure in S22 is used to master the flows of the branches of West Camas to deliver the appropriate amount of West Camas water to the diversion on these branches. In the Decree it was not identified as the diversion used to deliver West Camas water to the Hump Ditch. There are other diversions on the Crab Creek Branch of West Camas between the division of branches in S22 and our POD in S26. If our water is delivered in S22, instead at the Decreed PODs in S26&S36, how are you going to manage these other diversions (Hillman) that call for Crab Creek water and lie between the division in S22 and our first POD in S26? The structures in S22 merely assist in the delivery of West Camas water to the designated decreed PODs of the claimant.

 I AGREE with this proposed recommendation: no changes need to be made.

RE: West Camas Creek-Crab Creek Branch
Water Delivery System

To Whom it may concern:

I am representing Margaret, David J. and James F. Hagenbarth in the filing of water rights in the Snake River Basin Water System. The information contained below is in respect to a water delivery system used by the claimants and their predecessors. This system delivers the water decreed to the claimants and their predecessors in Right # 154A of the Suave vs Abbott Decree. This water is used on 960 acres owned by the claimants. An in depth analysis of the decree is necessary to completely understand the water sources, the priorities, the place of use and how they interrelate within the water delivery system.

The sources of water are West Camas Creek and Crab Creek. Around the turn of the century, a man named Crab built a short ditch in the NW $\frac{1}{4}$ of Section 22, T13NR38E. This ditch connected West Camas Creek to Crab Creek and said channel became known as the Crab Creek Branch of West Camas. The point where the claimants and their predecessors have historically diverted West Camas water into the Crab Creek Branch is located in the NWNW of Section 22, T13NR38E. After initial diversion into the Crab Creek Branch of West Camas, the claimants use three additional P/D's to service the water delivery system. The points of diversion are as follows: 1) T13NR38E, Section 26, NWSE; 2) T13NR38E, Section 36, NWNW; and 3) T12NR38E, Section 1, SWNW. Two of these P/D's are practically identical to those described under right #154 and the third P/D was included to better describe the delivery system. Crab Creek has very little natural flow after high water, consequently most normal flow later in the season comes from West Camas Creek. The water delivery system also used the Crooked Creek Channel to carry water to some of the land being irrigated. Water is injected into Crooked Creek in the SWNE of Section 35, T13NR38E. This water is taken out of Crooked Creek at the following points: T13NR38E, Section 35, NESE; T12NR38E Section 2, Lot 2 (NWNE) and the SESE; T12NR38E, Section 11, NENE. The attached map illustrates the above points of interest. It should be noted that the claimants' water right should be measured when said water is diverted from the Crab Creek Branch of West Camas and not from West Camas into the Crab Creek Branch. There is a measuring device in place to assist the watermaster in measuring flows of West Camas into the Crab Creek Branch.

The claimants are using this decreed water on the same number of acres as in the Decree, 960, but the land list includes some acres not included in the Decree. If one plots the place of use as described in the Decree, it is geographically impossible to irrigate portions of these lands. The inaccuracy of the land lists is inherent in this particular Decree and is probably

MICROFILMED

NOV 17 1992

understandable given the poor maps at that point in time. The claimants and their predecessors have used this decreed water via the delivery system on the land claimed as place of use. The important points are: that the water has been used and the number of acres have not been expanded.

The claimants are filing on those water rights and priorities listed under 154A and the Hump Ditch in the Suave Decree. A complete examination of these rights is necessary. The water rights identified in #1 (31-0373) and #3 (31-0374) under 154A are self-explanatory. They are independent of the Harmon Reservoir and have defined sources, diversion amounts and priority dates. The right described under #4 (31-0324) does not have an amount diverted but does sport a priority date of September 1, 1909 and a source defined as Camas Creek. This right is also independent of the Harmon Reservoir rights listed under #2 in 154A. The claimants are claiming a total of 17.2 c.f.s. under this priority. This was determined by subtracting the 2.0 c.f.s. at 1891 from the total amount diverted of 19.2 c.f.s. under 154A. The claimants recognize that this right is to be executed only to the extent that the other rights with better priorities under 154A fail to deliver to the claimants the total amount of 19.2 c.f.s.. The claimants recognize that at no time should the combination of all the rights listed under 154A result in a flow exceeding 19.2 c.f.s..

The claimants are owners of all the shares of the Hump Ditch right in the Harmon Reservoir Company. This ownership is based upon the fact that the claimants own all the land listed as place of use under 154A and that the claimants predecessor, D.V. Hagenbarth, purchased all remaining shares from the other shareholders in the Hump Ditch portion of the Harmon Reservoir rights. Deeds to this purchase can be found in the Clerk and Recorder's office in Clark County in Book 15 of Deeds, pages 353 and 357.

For a meaningful explanation to continue it is necessary to determine how many shares of the Harmon Reservoir are controlled by the claimants as a result of their ownership of the Hump Ditch Right. In Right #36 the Suave Decree addresses the Harmon Reservoir Company and defines two classes of rights that are pertinent thereto. The two 1900 rights are natural flow rights (31-0066,-0067) and the two 1909 rights are storage rights. Since the Harmon Reservoir is breached, the storage rights have no significance at this time. It is noted that the number of shares issued in the Harmon Reservoir Co. was based on the natural flow rights of 66.0 c.f.s.. The total number of shares was 1000 and Wood Livestock owned 892 of the 1000. As noted under right #36, the distribution of rights under the Wood Livestock Co. shares was to be granted later on in the Decree. This was done under Right #154. Right #154 is divided into 154A, 154B, 154C, and 154D. The rights were assigned the following amounts of water respectively, 20.0 c.f.s., 14.0 c.f.s., 32.0 c.f.s., and 10.0 c.f.s. for a total of 76.0 c.f.s..

#MICROFILMED

NOV 17 1992

(the Hump Ditch) has 20.0 c.f.s. or 20/76 or 26.3% of the shares belonging to Wood Livestock in the Harmon Reservoir Company. 26.3% of 892 Wood Livestock shares is 235 shares. The claimants as owners of Right #154A own 235 shares of the Harmon Reservoir and this amounts to 23.5% of the total shares issued. This gives the claimants the right to divert 23.5% of the amount of water decreed under each priority during the period when all shareholders have the right to divert water from the Harmon Reservoir sources.

The Decree speaks to two different time periods of water use, that period from the beginning of the stockwater and irrigation season to July 1st and that period from July 1st to the end of the irrigation season. In the first period the Decree makes available to all the shareholders all the Harmon Reservoir water rights, both natural flow and storage. In the second period the decree makes available only to a specific group of shareholders the continued use for irrigation of storage and natural flow water from the Harmon Reservoir rights. Furthermore, after July 1st the Decree limits those rights used solely for stockwater to only storage water. Since the reservoir is breached, only natural flow rights are pertinent at this time.

The claimants as owners of Right #154A (Hump Ditch) are included in the group specified by the Decree to continue use of natural flow rights after July 1st. It is now necessary to determine ownership of the natural flow rights used after July 1st by this specified group. This specified group is made up of those Harmon Reservoir stockholders identified in #36 who were outside Wood Livestock and also the owners of those portions of Wood Livestock Rights # 154A and 154C who were allowed to divert water for irrigation after July 1st. In analysing Right #36 and the limited Right #154A and 154C, the total c.f.s.'s diverted will be calculated. Those entities outside of Wood Livestock in Right #36 diverted 7.128 c.f.s. and that use after July 1st in #154A was 19.2 c.f.s. and #154C was 1.6 c.f.s.. This gave a total diversion amount of 27.93 c.f.s. for the entire group. Right #154A includes 68.7% of the water permitted by the decree to be diverted after July 1st for irrigation use. The claimants own right #154A.

In considering the above facts in regard to the Harmon Reservoir rights listed under right #154A (Hump Ditch), source #2, it becomes apparent that the claimants will need to file four separate water rights to accurately describe the Harmon Reservoir rights owned by the claimants. Since the reservoir is breached, only the two natural flow rights are of any consequence. These rights are 31-0066 (5/23/1900-30.0 c.f.s.) and 31-0067 (6/22/1900-36.0 c.f.s.). The use of these rights by the claimants is divided into two periods. The first period begins with the first use of stock and irrigation water in the spring and ends on July 1st (4/1-07/1) and the second period begins with the use of irrigation water after July 1st and ends at the termination of the irrigation season (7/2-11/1). As discussed previously,

MICROFILMED

NOV 17 1992

the decree stipulates a different proportion of ownership of each right for each period, consequently four separate filings. In light of the above and using strictly percentages, the Harmon Reservoir natural flow rights would be filed by the claimants as follows:

31-0066A 5/23/1900 irrigation 7.05 c.f.s. (30.OX.235) 4/1-7/1
 31-0066B 5/23/1900 irrigation 20.6 c.f.s. (30.OX.687) 7/2-11/1
 31-0067A 6/22/1900 irrigation 8.46 c.f.s. (36.OX.235) 4/1-7/1
 31-0067B 6/22/1900 irrigation 24.4 c.f.s. (36.OX.687) 7/2-11/1.

Taking into consideration all the water rights and priorities listed for 154A (1-4), the claimants recognize the courts stipulation that no more than 19.2 c.f.s. be diverted for irrigation. 154A-(1) describes water right #31-0373 and this is the oldest right owned by the claimants on West Camas Creek. It is obvious that this right would always be filled first and accounts for 2.0 c.f.s.. It naturally follows that the claimants would not have to divert more than 17.2 c.f.s. from any of the other rights to reach the maximum allowable of 19.2 c.f.s.. Therefore in filing the Harmon Reservoir rights, the claimants will only file for the maximum amount of 17.2 c.f.s. for the two 1900 natural flow rights which are for the period after July 1st (31-0066B and 31-0067B). Water rights 31-0066A and 31-0067A will be filed on as they appear above.

In a quick review of Right #154 in the Suave Decree, it might be construed that no water is used for irrigation until after July 1st. The claimants are quick to point out that their rights are specifically mentioned in the Decree as "the exception hereinafter stated". The Decree specifically mentions the claimants' rights in this manner: "The continuation of diversion and use under such rights including stored water after July 1st of each year, being for irrigation purposes, is limited as follows:". The limits placed on the claimants right is for the amount of 19.2 c.f.s. and 960 acres. If the diversion of water for irrigation had not occurred before July 1st, the Decree would not have referred to the irrigation use as a "continuation of diversion".

The claimants' West Camas Creek-Crab Creek Branch water delivery system delivers the waters of West Camas via the Crab Creek Branch of West Camas to the land claimed as place of use. This delivery system has available seven separate water rights which contribute a total flow not to exceed 19.2 c.f.s.. The claimants hope that this lengthy explanations of this most difficult Decree is understandable and clearly identifies the claimants' rights on West Camas Creek, the Crab Creek Branch of West Camas and Crab Creek.

Sincerely,

 James F. Hagenbarth
