STATE OF IDAHO
DEPARTMENT OF RECLAMATION
BOISE, IDAHO
REPORT OF ENGINEER

Permit No. 1183
This proof is for Beneficial Use in Water District No.

1. Name of applicant: John Edwards Montoya, Idaho
2. Source of water supply: Underground from a well
3. Location of point of diversion: Is in the S₄ SE₄ of Section 17
T. 5 N. R. 34 E. County of Jefferson

4. Describe works as they exist giving dimensions and capacities of same: Two wells for this point of diversion 131' apart. The old well is 94' deep and the new one is 80' deep. The old well has a crooked hole so that it is impossible to put in a Turbine type pump and the new well was not drilled deep enough to get into the good flow of water. It is the intention to drill the new well a little deeper and install a turbine pump. The old well has a centrifugal type pump operated by a 25 hp. D. E. horizontal motor. (This motor was burned out within the past 8 days due to low line voltage and is non-operative at present). The amount of water pumped from the old well is limited because of the lowered water table and the amount delivered to the fields has been unsatisfactory especially this year. The centrifugal pump sets in a pit and lifts the water 30" and the water is 16" higher into a dike ditch thence to the fields by gravity.
5. Water is used for: Irrigation and domestic purposes

6. State whether or not water has been turned into works of diversion: YES

7. List legal subdivisions of lands to be irrigated. If proof is for beneficial use, give exact number of acres under cultivation in each forty-acre tract. (Describe manner and place of use if other than irrigation)

SE₄ Section 17, Twp. 5 North, Range 34 East, S. E.

See the map

(Sketch map on attached plat, showing location and details of above description)

8. What large stream would the water here be appropriated finally reach?

Remarks:

Investigation made by J. E. Montoya, Idaho. The new well was drilled 80' deep and the old well was 94' deep. The new well was drilled in a good flow of water and the old well was drilled in a crooked hole. The new well was drilled in a good flow of water and the old well was drilled in a crooked hole.

Idaho Falls, Idaho

Dear Mr. Archibald:

Your letter of June 13th received.

Water License No. 17830 was issued to LeRoy C. Hays for 1.2 c.f.s. priority October 4, 1933, from well in SW¹/₄SE¹/₄, S. 34, T. 17, to irrigate 60 acres in SE¹/₄, Sec. 17, T. 8 N., R. 34 E., B. M.

Water License No. 17830 was issued to John Edwards for 0.8 c.f.s. priority December 27, 1942, from well in SW¹/₄SE¹/₄, Sec. 17, to irrigate 154 acres in SE¹/₄, Sec. 17, T. 8 N., R. 34 E., B. M.

The first license was issued for production from a centrifugal pump. The hole was crooked and the second well was drilled about 13' from first hole. The application claimed 2.0 c.f.s. which limited the total amount allowable in the two licenses.

Very truly yours,

GEO. N. CARTER

To whom it may concern:

I Donald W. Shenton, watermaster of Water District #31, make the following statement on behalf of the Park Bell Farms and their water rights licenses and water right claims filed with the Idaho Department Water Resources.

I am very familiar with the irrigation practices of the above named farms and have made numerous measurements of their respective wells. Though most of those flows at the wells exceeded the license amount, the amount in excess has been beneficially used and the farm has become totally dependent on the amounts being pumped. Because the delivery of the water is by way ditches which are long distances from the lands actually being irrigated, and the fact these delivery ditches were constructed through lava beds, they have very high seepage losses. Considerable effort has been made to seal these ditches. Many water users in the Mud Lake and Montevue area suffer these same types of losses as most of the water is delivered through long transmission systems which were also constructed in lava. It is imperative that these beneficial users of water be decreed or licensed to this farm for its continued existence.
