(208) 374-5696 - FAX

To Whom It May Concern:

August 21, 2000

Kirk Jacobs has diverted water during high water years out of Kelson Creek on many occasions, which has been witnessed by me, "Gregory A. Shenton, Watermaster for district #31". Since this was a claim to a water right, there would be no record of use in the Water Masters Report, nor would there be a charge on an assessment. Kirk Jacobs also has workable and controllable measuring devises.

GREGORY A. SHENTON - WATERMASTER

A handwritten signature in dark ink, appearing to read 'Gregory A. Shenton', is written over a horizontal line. The signature is fluid and cursive.

RE: EVIDENCE TO SUPPORT BENEFICIAL USE OF SNAKE RIVER BASIN
ADJUDICATION (SRBA) CLAIM(S) A31-00158, A31-10034, A31-10035

Dear Mr. Marshall:

The Idaho Department of Water Resources is reviewing SRBA claims in the Kilgore area of Basin 31. Our office conducted a field exam of the above referenced claim(s) but failed to find evidence of beneficial use. Idaho Code 42-222, paragraph 2 states, "All rights to the use of water . . . shall be lost and forfeited by a failure for the term of five (5) years to apply it to the beneficial use for which it was appropriated . . ."

To avoid forfeiture, please provide evidence of water delivery and payment of the water district assessment prior to 1987. This proof must be provided within 21 days of receipt of this letter to avoid a disallowal recommendation to the Snake River Basin Adjudication court.

If you no longer own the property appurtenant to the above referenced claim, please contact our office so we can notify the current owner of this matter.

Sincerely,

For Allen Ruberry
Senior Water Agent

NOTICE OF CHANGE OF WATER RIGHT OWNERSHIP

Please print or type. Attach pages with additional information. Instructions are on the back of this page.
Incomplete forms will be returned.

1. Water Right No(s): _____
Adjudication Claim No(s): A31-10034, A31-10035, A31-00158

2. The following **REQUIRED** information must be submitted with this form:

A. A copy of the most recent **DEED, TITLE POLICY, CONTRACT OF SALE** or other legal document indicating your ownership of the property and water rights or claims in question, **WITH ATTACHED LEGAL DESCRIPTION.**

AND

B. **PLAT OF PROPERTY** or **SURVEY MAP** showing the location of the place of use of the water right(s) or claim(s). (These are usually attached to your deed or on file with the county.)

OR

C. If your water right or adjudication claim is for ten or more acres of irrigation, you must submit a USDA Farm Service Agency **AERIAL PHOTO** with the irrigated acres outlined and point(s) of diversion clearly marked. The **AERIAL PHOTO** should be submitted in place of the **PLAT OF PROPERTY** or **SURVEY MAP**.

RE: CHANGE IN OWNERSHIP FOR A31-10034, A31-10035 AND
A31-000158

Dear Mr. Jacobs:

It has come to our attention that you may have recently purchased a tract of land in Clark County. The property to which I am referring was most recently owned by Norman Marshall. The legal description is as follows:

T13N R39E S30 NE1/4 NW1/4
T13N R39E S30 NW1/4 NW1/4
T13N R39E S30 SW1/4 NW1/4
T13N R39E S30 SE1/4 NW1/4
T13N R39E S30 NE1/4 NE1/4
T13N R39E S30 NW1/4 NE1/4
T13N R39E S30 SW1/4 NE1/4
T13N R39E S30 SE1/4 NE1/4

This property was filed on in the Snake River Basin Adjudication (SRBA), and we recommend that if, in fact, you now own the property in question, you file a "Change in Ownership" with this department in order that we may send all further correspondence to the appropriate owner(s).

After July 1, 2000 there will be a \$25.00 filing fee PER CLAIM NUMBER

Enclosed is a Change in Ownership form. Please fill out the form completely, sign and date it and return it to my attention along with a "copy" of your Warranty Deed and legal description of the property you have purchased.

Please call Allen Ruberry at (208)525-7161 to arrange an appointment.

Respectfully submitted,

A handwritten signature in cursive script that reads "Cheri Vandermeulen".

lations where appreciable changes in depth, or stage, occur, it will be necessary to raise or lower the transducers to compensate for changing velocity profiles. With a single pair of transducers the average velocity at 0.6 depth has been found satisfactory for use with the flow cross-sectional area to find the discharge.

Acoustic flowmeters are in the development stage at present (1966). Considerable improvement in equipment and flow-measuring technique can be expected in the future. Power requirements are now readily handled by a 110-volt alternating-current power supply, and under optimum conditions velocity measurement accuracies of 1 percent are indicated. Like other methods that measure only an average velocity of flow, the relationship of the particular velocity of flow to the average streamflow must be known, together with the cross-sectional area of the flow prism in order to determine the rate of flow.

104. Slope-Area Method.—The slope-area method consists of using the slope of the water surface, in a uniform reach of channel, and the average cross-sectional area of that reach, to give a rate of discharge. The discharge may be computed from the Manning formula,

$$Q = \frac{1.486}{n} A R^{2/3} S^{1/2} \quad (34)$$

where

Q = discharge in second-feet,

A = mean area of the channel cross section in square feet,

R = mean hydraulic radius of the channel in feet,

S = slope of the water surface = $\frac{\text{fall}}{\text{length of course}}$, and

n = a roughness factor depending on the character of the channel lining.

A straight course of the channel should be chosen, at least 200 feet and preferably 1,000 feet in length. The course should be free of rapids, abrupt falls, sudden contractions, or expansions.

The slope may be determined by dividing the difference in the water surface elevations at the two ends of the course by the length of the course. Gage points, carefully referenced to a common datum level, should be placed one on each bank of the channel and one in the center of the stream, in stilling wells if possible.

The hydraulic radius is defined as the area of the cross section divided by its wetted perimeter. Where the channel or canal is of regular cross section and the depths at the ends of the course are equal, the area and the wetted perimeter will be constant throughout the course. In irregular channels, the area and the wetted perimeter at several cross sections will be required and a mean value used in computing the hydraulic radius.

The factor n is dependent on the character of the channel. It may vary from 0.010 where conditions approaching the ideal are maintained, to 0.060 where the channel is strewn with stones and debris or is about one-third full of vegetation.

Inasmuch as the proper selection of the roughness factor n for many streams is difficult, and is at best an estimate, the discharge determined by the slope-area method is only approximate. Care must be taken to determine the slope and areas simultaneously if the water levels are changing. Various hydraulic text books and handbooks provide tables to assist in the computation of discharges by this method, using the data procured in the field.

105. Computation of Discharge Over Dams.—Many overflow dams have been built across streams. The quantity of over-flow can be computed by the general formula,

$$Q = C L H^{3/2} \quad (35)$$

where

Q = discharge in second-feet,

L = length of the crest of the dam in feet,

H = head on the crest in feet, and

C = coefficient dependent on the shape of the crest and the head.

Because shapes or profiles of dams and their crests vary a great deal, coefficients of discharge also vary. These coefficients may be determined from hydraulic model studies because experience has shown that C differs only slightly, if at all, from model to prototype. In many instances it may be possible to adjust any slight differences in the coefficients of discharge obtained from models for subsequent use on the prototype. Engineering Monograph No. 9 gives values of C for a variety of overfall shapes [10].

Another procedure applicable to many overflow dams is to determine the actual discharge by one of the methods

is used most frequently.¹ Manning proposed the following value of c in the Chezy formula

$$c = \frac{1.486r^{1/6}}{n} \quad (151)$$

where n is the same coefficient of roughness used in the earlier Ganguillet-Kutter formula.² Values of n prepared by Horton³ are given in Table 19.

TO WHOM IT MAY CONCERN:

We are writing this letter in regards to the Water Resource letter concerning Ajudication.

The two permits in question are #10034 and #10035. The Marshall's filed and have used water from these two water permits since 1966. They have both been used for irrigation and watering stock since 1966.

I Norman Y. Marshall do hereby certify that I have used the water in the above permits #10034 and #10035 for beneficial use since 1966.

Norman Y. Marshall

STATE OF IDAHO

COUNTY OF Jefferson

On this 8th day of March, 1993, before me, the undersigned, a Notary Public in and for the State of Idaho, personally appeared Norman Y. Marshall, known to me to be the person whose name is subscribed to the above instrument, and acknowledged to me that he executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed my official seal the day and year in this certificate first above written

Notary Public for Idaho

RE: EVIDENCE OF PRIORITY

Dear Claimant(s):

The Notice(s) of Claim identified with the number shown above in the "address" label and at the "end" of this letter has been filed in the Snake River Basin Adjudication (SRBA). The Notice indicates water usage is based on "Beneficial Use". Water rights of this type are established by the historical use of water, dating back to when water was first used for the purpose claimed, at or on the place of use identified on the Notice. The date the water was first put to use, known as the priority date, has not been confirmed by a License, Decree, or Permit. For this reason, proof must be provided supporting the priority date. As the claimant, you are responsible for submitting the necessary proof to support the priority date.

It is important that each element of the Notice be substantiated. For instance, regarding claims for irrigation, the evidence should tend to show that diversion works were in place, that they were capable of diverting the claimed diversion rate, and that the diverted water was beneficially used on the entire claimed place of use on or before the claimed priority date.

For your reference, I have provided a printout of your Notice and the pamphlet entitled "Evidence of Priority". The pamphlet describes the types of evidence required and suggests which documents will fulfill this requirement. While I encourage you to read all of the pamphlet, I direct your attention to the two sections entitled "What Kind of Evidence is Required" and "Some examples of Documents Which May Be Evidence of the Priority Date".

EVIDENCE OF PRIORITY
Page - 2 -

It is our goal to recommend historical water rights within the Snake River Basin as accurately as possible. Field exams to verify other items of the Notice have been or soon will be conducted by Department personnel.

The Department will not recommend the Notice be decreed by the court if no evidence of a priority date is submitted.

Please submit the required evidence supporting the priority date by MARCH 9, 1993, referencing all documents with the corresponding Notice number. If you have any questions not covered by this letter or the enclosed pamphlet, please contact this office.

Respectfully submitted,

Eric Verner
Senior Water Agent
