5. Description of existing diversion works (Dams, Reservoirs, Ditches, Wells, Pumps, Pipelines, Headgates, Etc.) including the dates of any changes or enlargements in use, the dimensions of the diversion works as constructed and as enlarged and the depth of each well.

The diversion structure is a 100 foot long dam with a by-pass gate and fish ladder that backs up water to an impoundment. The water is diverted into two large pipelines to the original powerhouse established under Water Rights 22-00606; 22-02123A and 22-02123B; and 22-02126. Diversion is made at the dam impoundment through a six foot diameter pipeline which travels through the hillside along the creek and after emerging from the hillside is split into two five foot diameter penstocks entering the powerhouse where flow is directed through two turbine generators and then discharged back into the creek.
