Everything south of creek in N $\frac{1}{2}$ NE $\frac{1}{4}$ is Saktinens -

all small wells ^{drilled between 1910 & 1940} went dry have gone dry due to newer wells - fish propagation no longer possible due to wells drying up. The wells only run for 1 month (in January) after irrigation wells were shut down it took until January for wells to start flowing again.

Sounds like regulation of gw needs to occur - new wells have ^{depleted} ~~been~~ aquifer plastic line to feed lots is what is leaking - ~~on~~ only place where he can still raise fish - the warm water goes into pond & is supplemented with spring water - the fish will die with out the warm water. Will not cap this well!! Casing used to be 12' above ground to pressurize a domestic use. Casing was cut off at ground to provide irrigation water. Year round fish prop. wells are biggest wasters - running year

Dear Claimants:

We are now conducting water right claim verification examinations in your area. An examination is needed to verify your water use in order to issue a water right license and/or decree. Information on your claims which may need to be verified include source of water, type of usage, amount of water used and legal descriptions of the point of diversion and/or place of use.

In order to expedite these field examinations, which must be completed this summer, please contact me at (208)334-2190 to make an appointment at a time that is convenient for you. Although it is not mandatory that you accompany me, it does insure that an accurate description of your system will be made. If either yourself, or someone familiar with the system, could accompany me it would be appreciated.

If you have any questions in regard to the exam verification, please feel free to contact me.

Sincerely,
