Re: Recommendations

51-02013 - Priority date of 01/09/1919 (Late proof)

Applied for 74 cfs on 4200 acres from Louse Creek 08/23/1909.
Licensed for 1.22 cfs for 61 acres of irrigation and domestic use.
Field exam conducted 07/11/1928.
Correspondence following the field exam between permit holder and the Commissioner of Reclamation indicates the permit holder felt that 1.22 cfs was less than what had been beneficially used. The commissioner's response dated 09/26/1928 acknowledged that additional irrigation had occurred; however, because of the isolated location of the property it would not be a problem if the additional water stored in the reservoir was used.

SRBA Recommendation

1.22 cfs for the irrigation of 61 acres within 252.8 acre permissible place of use.
0.06 cfs for domestic use for 3 homes.
1.22 cfs total.

51-02233 - Priority date of 10/01/1931

Applied for 1575 af on 315 acres from Rattlesnake Creek.
Licensed for 750 af for 150 acres of irrigation and for domestic use.
First field exam conducted 06/08/1937 found 140 acres irrigated (appears to include the 61 acres licensed on 51-02013.)
Second field exam conducted 09/09/1942 found a total of 150 acres irrigated.

SRBA Recommendation

750 af for the irrigation of 150 acres within 252.8 acre permissible place of use.
3.6 af for domestic use for 3 homes.
14 af for stockwater use.
750 af total with a total combined volume of 1050 af with rights 51-02239 and 51-10378.
22.0 cfs diversion to storage with a total combined diversion rate of 22.0 cfs when used with 51-02239. (The claimed diversion rate was 22.0 cfs which is well below the capacity of the diversion works.)

51-02239 - Priority date of 01/22/1948

Applied for 400 af on 80 acres (stated it was for Rattlesnake Creek water stored in Grasmere Reservoir.)
Licensed for 300 af on 60 acres.
Field exam conducted on 10-23-1958 found 60 acres of irrigated land not covered by earlier rights.

SRBA Recommendation

300 af for the irrigation of 60 acres within 252.8 acre permissible place of use.
300 af total with a total combined volume of 1050 af with rights 51-02233 and 51-10378.
22.0 cfs diversion to storage with a total combined diversion rate of 22.0 cfs when used with 51-02233. (The claimed diversion rate was 50.0 cfs; however, the permit implied that this right was

for the additional water that was diverted from Rattlesnake Creek and stored in Grasmere Reservoir under right 51-02233. Since the permit was for the additional storage, and not additional diversion from Rattlesnake Creek the combined rate limit was imposed. I was not able to locate a measurement for what was actually diverted from Rattlesnake Creek.

51-10378 - SRBA beneficial use claim.

SRBA Recommendation

1/9/1919
Priority date of ~~10/23/1958~~ (field exam date for ~~51-02239~~) *22.0*
Source is Louse Creek.

1050 af with a total combined volume of 1050 af with rights 51-02233 and 51-02239. (1050 af is based on 210 acres irrigated as of 10/23/1958 at the rate of 5 af/acre.)

22.0 cfs diversion to storage.

The 22.0 cfs diversion rate was claimed for diversion from Rattlesnake Creek. Since the diversion capacity from Louse Creek exceeds this amount, and since I was not able to actually measure the amount of water diverted from Louse Creek, the 22.0 cfs is being used as the recommended rate for diversion to storage under this right.

252.8 acres of irrigation. (A storage right can be enlarged provided there is no injury.)

51-02130 - Priority date of 02/03/1961 (Late proof)

Applied for 3.0 cfs on 400 acres from Louse Creek 03/19/1954.

Field exam conducted 09/24/1987 found a total of 253 acres irrigated. (GIS work 07/01/1998 found a total of 252.8 acres irrigated.)

SRBA Recommendation

3.0 cfs for the irrigation of a total of 252.8 acres for all rights.

There has been an effort to adapt this right to cover some of the unlicensed storage in Grasmere Reservoir. However, the reservoir was essentially complete when first inspected for the State Engineer in 1915. The problem has always been that the reservoir has had more capacity than what could be beneficially used in a single irrigation season. Since the reservoir does not always refill, any water remaining after the irrigation season is carried over to the next irrigation season and beneficially used. Therefore, since the irrigation storage and diversion to storage from Louse Creek can be described by the beneficial use right 51-10378, this right can be licensed essentially as permitted, but with the reduction of the place of use from 400 acres to 252.8 acres (61 acres irrigated with Louse Creek water has already been licensed under 51-02013, and they are included within the 252.8 acre total.)
