REPORT OF ENGINEER

Permit No. R-894This project is for Beneficial Use

In Water District No. _____

1. Name of applicant W. F. Strickland2. Source of water supply Louse Creek3. Location of point of diversion: Is in the SE 1/4 of Section 30T. 11 S. R. 6 E. County of Owyhee

4. Describe works as they exist, giving dimensions and capacities of same:

Earth fill dam, 3 1/2' high, 950' crest length, 12' crest width, 3:1 upstream slope; 2:1 downstream slope. Riprapped upstream side, 5' free-board, 12" conduit. Rock riprap head wall at outlet. Screw gate with control rod on face of dam. Supports are old grader blades set vertical in concrete. Rod is 7/8" welded to 3/4" pipe not protected by oil tube. The spillway is on the south end of the dam, blasted out of rock, with a canal leading on a contour around the hillside well away from dam, 8' deep by 27' wide on top and 11' wide on bottom. Water line 2 1/2' deep x 16'. Outlet ditch is 2' deep x 6' top width x 4' to 5' bottom width.

REMARKS

Length of crest was measured starting with 0+00 at north edge of spillway on south end of dam. Between station 4+00 and 5+16' there is a longitudinal cracked section varying in width 1" to 3" and appears to be deep. This section of fill varies in depth from 2' to 6' due to a rock ridge that runs through this part of the fill. Center is at station 6+36'. There are no leaks in any part of the fill. Recommend the cracked section be barred and puddle tamped and refilled.

The deep part of the fill between station 6+36' and 9+50' has a wet area approximately 4' up from the toe with an alkali crust with bees working. The area below the toe is marshy. There is no sluffing in fill due to the wetness.
