NOTES:

The measurements made during the field span total 20.4 cfs. However, several entitled PO's were not measured. A full one inch bore is recommended for this claim on the basis that the remaining ditch measurements would indicate a system capable of delivering the decreed rights. Beneficial use claim and thus flood water rights. If a dispute arises the other PO's and ditch should be measured.

The standard migration practice for the stream basins is wild flooding and this right supports the historical practice in the area of being early season flood water when it is available.

Dear Claimant(s):

In the past, you submitted the above referenced claim(s) in the Snake River Basin Adjudication. Enclosed is a computer generated print-out of the claim(s) for your reference only; this print-out is **NOT** to be returned or re-filed. You have indicated when this claim was filed that the water right(s) was based on either a "Statutory Claim" or "Beneficial Use" of the water. Water rights of this type are established by the historical use of water for a beneficial purpose, dating back to the time the water was first used, this date being the "**Priority Date**" as shown on the enclosed print-out. Your claim(s) has not been confirmed by a previous filing with the Department of Water Resources since there is no decree, license, or permit on file to verify the use of this water. For this reason, the Department is under a legal requirement to gather evidence from claimants supporting the date of priority for claims based on historical beneficial use of water. Any other claims you may have filed, that are not listed above, do not require evidence of priority.

Enclosed is a pamphlet entitled "**Evidence of Priority**" which describes why evidence of the priority date is necessary along with examples of types of evidence that can be submitted to fulfill this requirement. If no evidence is submitted, or we do not hear from you within the time limit below, your priority date, as claimed, may not be recommended to the Court for decree. This could jeopardize your water use under this right(s), if water availability problems arise in the future. It is our goal to decree the historical water rights within the Snake River Basin as accurately as possible. Field exams to verify claims in this area should be conducted this summer by Department personnel. Prior to conducting the field exams, we will contact you to discuss details and schedule a time convenient for you.

Please submit the required evidence supporting the priority date(s) by March 15, 1993, referencing all documents with the corresponding claim number(s). If you have any questions not covered by this letter, or the enclosed pamphlet, please call the toll-free number listed on the back page of the pamphlet or the Western Region office shown above.

MANNING EQUATION CHANNEL CAPACITY RESULTS

09-30-1993

File Number: A51-10344

Claimant: C BRACKETT

Channel measured: MAIN DITCH FROM SOUTHERNMOST POD ON BIG FLAT CREEK

Date of measurement: 9/29/93

Measurement location:

Calculation prepared by: LINDA WERNER

Comments about the measurement:

The results of the calculation are:

The length of the channel measured is 200 feet.

The upstream and downstream rod readings are 7.80 and 8.60 feet.

The channel cross section is 10.06 ft-sq.

The wetted perimeter is 15.13 feet.

The hydraulic radius is 0.66 feet.

The slope is 0.0040

The roughness coefficient is 0.0500

The flow velocity is 1.436 ft/sec.

The rate of flow is 14.44 cfs.
