Check here if you are submitting documents. Please list each document by the title and number of pages. You may use additional pages if necessary.

Note: You should attach copies of documents which support your objection. Note on each document the "box number" it supports.

The quantity should be 400 c.f.s. as decreed, rather than 54.4 c.f.s.

Specifically describe how you want the Director's Report to be changed. You may use additional pages if necessary.

CHANGES TO THE DIRECTOR'S REPORT

This water right was decreed in the amount of 400 c.f.s. This water right was decreed in the amount of 400 c.f.s. by the Third Judicial District Court on July 25, 1917 in Matthew Joyce et al. v. Jacob Rubin et al. The Directors Report recommends this water right in the amount of 54.4 c.f.s., based on a theory of partial forfeiture which is contrary to the Court's Memorandum Decision on Basin-Wide Issue 10, Case No. 91-0010. In addition, the recommendation in the Directors Report is based on insufficient evidence to support the claim of partial forfeiture or the reduction in the quantity of the water right.

You must state the reason(s) by number for each box checked. You may use additional pages, if necessary.

RE: Snake River Basin Adjudication (SRBA)
Objection 57-02015 et al.
only

Dear Mr. Hulet:

In our meeting Friday morning you requested this letter setting forth specific numbers relative to the water rights and flows in Murphy Mutual Canal (MMC). Without restating the factual background, the following should meet your objectives.

For Joyce Livestock (Nettleton) canal water rights, the amount of water for conveyance loss found in the claim file was 5.14 cfs, using a loss rate of 1.0 feet per day typical for medium soils. (With simple calculations for 14.77 cfs, this amount of loss is 34.8 per cent.)

Recommended for Nettleton lands from MMC:

At 481 acres x .02 cfs/acre = 9.62 cfs
Conveyance Loss = 5.14+cfs
14.77 cfs

Using the acreage figures you presented:

At 450 acres x .02 cfs/acre = 9.00 cfs
Conveyance Loss = 5.14+cfs
14.14 cfs

The 0.63 cfs difference would be negligible in administering the water rights.

As to water flows available to you when a full supply can be diverted, IDWR asserts the maximum amount measured to date has been 72.7 cfs. This amount of water does not reflect what may be diverted with structural canal improvements and full development of existing water rights. The 72.7 cfs is the maximum that has been diverted to date and thus the maximum amount that can be allocated to all water rights carried down MMC.

Canal capacity	72.70 cfs
Nettleton rights	- <u>14.77</u>

Your 57-00179	- 0.20
Your 57-00180B	- <u>0.40</u>
Your 57-00181 could be amended to	57.33

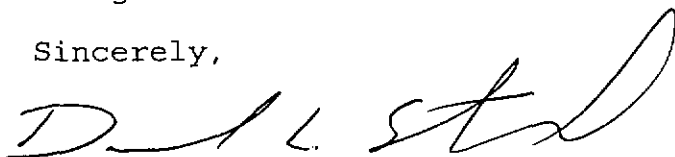

The 57.33 cfs is the amount of water IDWR has offered to amend its recommendation from 54.4 cfs. In terms of diversion down MMC, you could divert, if the capacity were increased:

1865 and 1906 water rights	57.93 cfs
1983 permit 57-07385	+ <u>70.00</u>
	127.93 cfs

For IDWR to agree to the change to 57-00181 shown above you would agree to withdraw your objections to water right claim numbers 57-02315, 57-02015 and 57-02191 and to agree any rights asserted by these claims would cease to exist.

After you have reviewed these figures, please notify me by Friday, November 5, 1993, to advise me on your view of stipulating to your objections. If you find the numbers satisfactory, I will immediately thereafter draft a stipulation for you to review and sign.

Sincerely,

Daniel L. Steckel

referred to and made a part hereof.

Witness my hand this 20th day of August, 1923.

W. G. SWENDSEN,
Commissioner of Reclamation.

Remarks:

On December 26, 1906, C. C. Childs, et al, the predecessors in interest of this applicant, the Murphy Irrigation District, secured Permit No. 2611 from the State Engineer of the State of Idaho for 400 cubic feet per second of the water of Sinkler Creek. This water right for the same amount and for the same priority date was also adjudicated in the Sinkler Creek water suit in the District Court of the Third Judicial District in and for the County of Owyhee, entitled Mathew Joyce et al vs. Jacob Rubin, et al., the decree in which case, dated March 20, 1912, was filed in said action April 1, 1912, and subsequently modified and confirmed by the Supreme Court of the State of Idaho, 23 Idaho 296; 130 Pac. 793. This permit filing was made before the law authorized separate filing for reservoir and secondary use and has been always relied upon by this applicant and its predecessors to appropriate the direct flow of Sinkler Creek up to 400 cubic feet per second to fill and refill its reservoir. The reservoir and canal system proposed in said Permit No. 2611 has been completed in its entirety. License was issued under said permit for 55 sec.ft. as of Oct. 22, 1907. The said license was issued as a secondary rather than as a storage permit. In order to leave no question to the right of the Murphy Irrigation District to store the crest of the flood of Sinkler Creek which actually flows in excess of 55 cubic feet per second, this application for storage permit is made but without waiver of the claim of the applicant to store said flood water as it has for years done under said Permit No. 2611 and the Decree of Court aforesaid.

For maps, and other information, connected with the completed dam and reservoir, reference is hereby made to the said Permit No. 2611 and the Proofs of Completion filed and to the records and files of the State Department of Reclamation relating to dams of the State of Idaho.

Proof of Completion of Works made November 3, 1923.

Certificate of Completion of Works issued December 7, 1923.

REMARKS:

No period of use listed in original WR need to change to WR Standards

The canal used for this water right will only hold 55 cfs. WR's A57-00179 A57-00180B Diversion Rates ARE .4 cfs & .2 cfs ∴ This claim needs to be reduced to 54.4 cfs. This will give 55 cfs (The carrying of the canal) between the three of them
