area. Average monthly winter temperatures are lower by several degrees Fahrenheit than for Colwell. Average temperatures for December and January are below 32°. Thus, it seems unlikely that irrigation would normally be beneficial during these months. Average temperatures during February and November are above freezing and irrigation water could be beneficially applied. Total winter precipitation is less than the quantity of water the soil must store in reservoir can contain. Therefore, winter irrigation could be beneficial. (Note: This assumes the soil to be capable of storing in excess of 6 inches of water in the soil profile.)
