SYSTEM DESCRIPTION

CLAIMANT: BENNETT CREEK FARMS AND/OR CARL REYNOLDS & SONS

CLAIM NOS.: A61-00277, -00278, -00279, -00359, -00360, -02034,
-02092, -02225, -02236C, -02236D, -07244, -007273

The main components of the Bennett Creek Farm irrigation system consists of five on-stream reservoirs, seven pumping stations, one main diversion structure on Bennett Creek that feeds a delivery canal and a mainline system from the seven pumping stations to pressurize sprinkler systems that provide irrigation water to the fields. The names and capacities of the five reservoirs are:

Hot Springs Creek Reservoir #1--capacity	450 AF
Hot Springs Creek Reservoir #2--capacity	5334 AF
Hot Springs Creek Reservoir #3--capacity	553 AF
Upper Teapot Reservoir-----capacity	424 AF
Lower Teapot Reservoir-----capacity	812 AF

The pumping stations contain from one to three pumps. The horse power, serial numbers and manufacture's names for the motors and pumps as determined by a 1987 licensing field exam are described on Attachment "A" to this memo. Some of the equipment was upgraded and changed between the 1987 exam and a subsequent adjudication field exam in 1994. The changes are noted in parentheses.

The uppermost reservoir, Hot Springs Creek #1 receives only Hot Springs Creek (aka Warm Springs Creek) water and is also known as Hall Reservoir. Water is released back into Hot Springs Creek where it flows through the other two Hot Springs Reservoirs and then re-diverted from pumping stations in the two Teapot Reservoirs which are located on Bennett Creek.

Hot Springs Creek Reservoir #2 receives Bennett Creek water from a canal that originates at a P/D in Section 1, T04S, R08E. The canal is about 4.5 miles long from the P/D to the reservoir. Water is also released from this reservoir into Hot Springs Creek and re-diverted from pump stations in the two Teapot Reservoirs to the mainline system and sprinklers.

Hot Springs Creek Reservoir #3 fills from water released from Hot Springs #2 which is upstream. The source and P/D for #3 is the same as #2. Water released from #3 is distributed to the fields in the same manner as described for Hot Springs Reservoirs #1 & #2. The water right for this facility is covered in license 61-07561 that did not require an SRBA filing.

The two Teapot Reservoirs are located on stream in Bennett Creek. They receive water that flows through Hot Springs #2 & #3 reservoirs for re-diversion and direct flow Bennett Creek water for

69
storage and diversion to the mainline and sprinkler system.

The seven pump stations on Bennett Creek, including the three at the Teapot Reservoirs, all divert to mainlines. With the utilization of portable mainlines, the entire farm can be put under sprinkler irrigation. About one-third (1200 acres) of the place of use is currently being farmed and the remaining is enrolled in the CRP program.

NOTES:

This claim was amended to comply with a 3585-acre POU developed in the licensing process.

Part of the POU is in CRP

It was not possible to develop a realistic POU using GIS that matched the licensed POU. Therefore, with Steve Reynolds approval on 9-9-98 the POU was realigned using GIS. If GIS would have been available when the licensing field exam and review was performed a more reasonable POU would have been developed. A transfer shouldn't be necessary under the circumstances.

NOTES:

The "diversion to storage" component was added to the license when it was issued 5-24-96 with a Period of Use from 1-1 to 12-31. The "diversion" component is justified but the full year "period" has the potential of causing injury to Permit 61-07466. According to Shelley Reams, Water Allocation Supervisor, there is nothing in file to justify the year-round diversion to storage. Therefore, the recommendation for A61-022360 changes the "diversion to storage" "period of use" to 11-1 to 4-15 which is the same as companion rights 61-07273 and 61-07561. See Memo dated 1-3-96 and E-mail message dated 25/July/96 for more information.

9/27/96 - The period of ^{diversion to storage} ~~use~~ was changed to 11-1 to 3-31 to comply with the "non-irrigation season" for the region. To allow a diversion to storage at anytime during the irrigation season for the live flow Bennett Creek rights would injure those rights. The most critical time for availability of live flow water from Bennett Creek is early in the year.

MEMORANDUM

TO: Files 61-02236C/02236D/07244/07273/07561
Frank Galey, Jr and Travelers Insurance
SRBA claims filed by Carl F. Reynolds and Sons

FROM: Brenda Chapman

DATE: January 3, 1996

RE: Recommendation Adjustment(s)

=====

Per the December 28th meeting with Jim Johnson, Shelley Keen, and I, the final licensing recommendations for the above rights are based on the following information:

* Ownership Change: Mr. Galey is deceased and according to the exams and the SRBA claims filed, the new owners are Carl Reynolds and Sons. Two of the permits (61-7244 and 61-07273) are owned by Mr. Galey's lienholder, The Travelers Insurance Company and the licenses will be issued in their names. Those licenses in Mr. Galey's name will be sent in care of the new owners, Carl Reynolds and Sons. Claims have been filed by the new owner on four of the five rights. A claim is not required for 61-07561.

* A statement on the application for Permit 61-02236 mentions the feeder channel from Bennett Creek has a capacity of 20 cfs. However, the permit as approved without an active flow component. Per the 6/21/78 Administrative Memorandum guidelines for off stream storage, a rate of 20 cfs can be included in the recommendations. This will not constitute an expansion of the permit.

* Hot Springs Creek will not be added as one of the sources for 61-02236D/07273/07561/07244. It would change the original intent of the permit holder to divert water into storage reservoirs that happen to be on another stream.

* The above rights divert water to a combined total of 3,725 acres. All of the water can be diverted to the entire place of use; ~~therefore, all of the acres will be recommended on all of the licenses.~~ According to Idaho Code § 42-222, as long as other water right holders are not injured, the number of acres irrigated from stored water can be increased.

* The point of injection from Bennett Creek into Hot Springs Creek Reservoir has been added to 61-02236D, 61-07273 and 61-07561. The same points of redirection have been added to all of the rights.

Mel,

I see nothing in the file to specifically justify the year-round diversion to storage for 61-02236D. I think it may be worthwhile for you to explore the injury potential.

Re: Applications for Amendment

On this date the Place of Use land list on the Applications for Amendment for the Permits described above were changed by myself and Steve Reynolds. The alteration deleted the NE1/4, Sec 25, 04S, 08E from the Place of Use. This parcel is not owned by Reynolds & Sons Partnership but by a Mr & Mrs Ensley. It has however been included in their farm's operation for many years. Due to the non-ownership issue they do not want their water rights to become appurtenant to this land.

The history of the Ensley property as understood and explained by Steve Reynolds is as follows: The prior owner, Frank Galey, by virtue of some kind of lease arrangement, included this land in his farming operation in the late 1970's or early 1980's. He supposedly raised potatoes on the land for one year using his own water but didn't continue irrigating the land in future years due to a lack of water. The Reynolds family began leasing Mr Galey's farm in 1986 and purchased it in 1989. In 1987 a large part of the Galey farm, including the Ensley parcel, was entered into the CRP program. The Reynolds family, at the request of Mr Ensley, planted the Ensley property with a dry land cover crop to meet the CRP requirements but never irrigated the land.

The ownership of the Ensley parcel was not known when the licensing amendments were prepared. This issue was subsequently discovered and rather than re-print the amendment applications they were altered at the time they were executed by Steve Reynolds on 2/9/1996.
