To Whom it may concern:

Re: Water Right # 67 - 04181

We purchased this property located at 2333 Orchard Road, Council, Idaho in March 1969. At the time of purchase there was an established pond above the house with cat tails and water plants flourishing as well as willow trees at places around the pond. There was also an irrigation ditch from it out into the field and down the field. The water entered the pond at the northeast corner of the land, using waste water in the ditches from both sides of the road. There was and is a large culvert under the road at that point bringing water from the north side ditch. Water flows from the pond back into the ditch at the northwest corner of the pond.

We have and do use the pond water for:

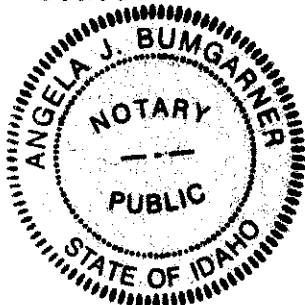

Aesthetic Use: We have always had domestic white geese on our pond. At one point we used them for food, but now they are there because we like them. We have had catfish and crappie in the pond as well as frogs and aquatic life on which kingfishers and blue heron feed. We have wild mallard ducks who nest and raise their young there each year. We have red wing blackbirds which have woven nests in the stalks of the cat tails upon their spring arrival. One year we had two large swan feeding in the pond for a few days. We have a paddle boat for neighboring children to use, with permission, to look at frogs and enjoy slowly looking around the pond. We see cars slow down to look at something in the pond area. It is a source of peace and delight.

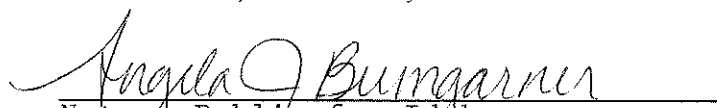

Domestic use: Though we no longer use the irrigation ditches in the pasture, over the years we have piped water to a ½ hp pump which we use to water our garden and yard and some of the other area of the land. We use two hoses from this pump during the watering season. The pond has always been a source of water for the animals in our pasture - mostly cows over the years and sometimes horses.
