FINDINGS OF FACT

4) There exist numerous separate decrees on the tributaries of the Payette River which adjudicate the various priorities to the use of the water on those tributaries. Diversion and beneficial use of water on these decreed tributary streams has in the past been without regard for uses or rights claimed on the Payette River proper, and users on the Payette River proper have made no demand on these tributary streams for water to fill prior rights on the main stem.

5) The present use of water under previously decreed rights in the Payette River Drainage Basin was found, in many cases, to be different from the use as described in the original decrees. Changes in place of use or point of diversion, apparent errors in the original decrees, abandonment or forfeiture of use, and the updating and improvement of irrigation systems through the years are some of the reasons for recommendations of decreed rights different from the original decrees.

6) Beneficial use rights from surface water sources are those rights which were commenced by diversion and application of the water to a beneficial use prior to May 20, 1971. Beneficial use rights from groundwater sources are those which were commenced by diversion and application of the water to a beneficial use prior to March 25, 1963. All other rights to the use of water must have been initiated by an application filed with the Department, or a prior decree. The only exceptions are groundwater uses for domestic purposes, and federal reserved rights necessary to preserve timber or to secure favorable water flows. Permits and licenses herein are updated as of December 1, 1978.

7) Some water rights recommended herein were initiated by application and permit from the Department. These permit rights are not decreed herein, but are subject to the requirement that proof of beneficial use of the water must be submitted to the Department and each right will be limited to and confirmed by such license as may subsequently be issued by the Department.

8) The consumptive use of water for irrigation purposes was found to be dependent upon location within the basin, and varies from 2.0 AFA to 3.0 AFA per acre as shown in Figure 2. [Reference: Sutter, R.J. and G.L. Corey, 1970, *Consumptive Irrigation Requirements for Crops in Idaho*, University of Idaho Agricultural Experiment Station Bull. 516.]

9) The existing water rights in the Payette River Drainage Basin were found to be in most cases based on .02 CFS (one miner's inch) per acre in addition to a rate to compensate for delivery losses.

10) The irrigation season is found to be dependent upon location within the basin. As shown in Figure 2, the three seasons consist of: 184 days (April 15 through October 15), 215 days (April 1 through November 1), and 246 days (March 15 through November 15). [Reference: Stevlingson, David J., and Dale O. Everson, *Spring and Fall Freezing Temperatures in Idaho*, University of Idaho Agricultural Experiment Station Bull. 494.]

11) The amount of water required for stock watering purposes is found to be 12 gallons of water per day per head for range cattle and horses, 35 gallons per day for dairy cattle, and 2 gallons per day per head for sheep. For domestic or household use, the average requirement is 1,000 gallons of water per day per household. [Reference: U.S. Environmental Protection Agency, 1974, *Manual of Individual Water Supply Systems*.]
