MEMORANDUM

TO: FILE
FROM: STEVE LESTER
DATE: JANUARY 3, 1992
SUBJECT: PERMIT 65-07826 FIELD EXAM

It appears that the permit was originally filed to include two ditches from Hill Creek for the additional acres not decreed in the Payette River Basin Adjudication (PRBA). One ditch was to be for acres south of the creek, and the other ditch would serve acres north of the creek.

At the time of the PRBA, the south side ditch originating in L.4 (NWNW) S.5 was in place and was decreed via right 65-10450 for 41 acres presumably south of Hill Creek. The acres were allotted .02 cfs/acre plus ditch loss (1.29 cfs for 41 acres equals about .03 cfs/acre). It appears from the PRBA aerial photos that the 41 acres represent the same land found south of the creek in 1988 (however, only found 37 acres south of creek in 1988).

1988 conditions were different. The owner stated that the south ditch was no longer used (ditch appears to have been dry for some time). Instead, the north side ditch was used to convey water to lands on both sides of Hill Creek. The new ditch was filled by Hill Creek and an unnamed stream tributary to Hill Creek. It appears that a P/D change occurred for the decreed right. The total irrigated area in 1988 was 188 acres as shown in item A of Attachment A. The exam found 37 irrigated acres south of the creek. The acres south of the creek and compatible with the 1988 findings were not included in the license recommendations due to a full allotment provided in 65-10450. The remaining 158 acres were recommended for licensing. Refer to Attachment A.

Ditch loss was not anticipated in the permit based on 4.00 cfs for 221 acres. Sufficient information was not gathered to calculate ditch loss at this time. The question of ditch loss for this system can be addressed at a later date in the SRBA review for Basin 65. Similarly, the changes in 65-10450 and other adjudication questions can be handled at a later date. The discrepancy between 41 acres in 65-10450 and only 30 acres to exclude in licensing of 65-07826 can also be resolved in the SRBA and can be currently handled with condition R25.

Randy and I were going to measure the ditch during the 6/1 visit but heavy rain prevented a measurement. By the second visit on 6/9, Hill Creek flow had declined significantly. The 6/9 measurement of 3.12 cfs between P/D 1 and 2, combined with high water marks in the ditch and additional flow from P/D 2, provide a solid basis for recommending .02 cfs/acre or 3.16 cfs for 158 acres. It also appears reasonable to assume that the ditch can carry a full allotment for 188 acres (3.76 cfs) based on the P/D 1 measurement and P/D 2 estimate.

The 188 acres have an irrigation requirement of 658 afa. 188 inches, or 3.76 cfs, can provide 1603.5 afa for the season. Even a more limited flow measured at P/D 1 (3.12 cfs) can easily provide the irrigation requirement for all 188 acres ($3.12 \times 215 \times 1.9835 = 1330.5$ afa). Sufficient information is available to license 158 acres at .02 cfs/acre and 3.5 afa/acre. In this manner, the two rights will provide a full compliment of Hill Creek water for all of the land.
