FEB 27 2003

Dear Grazing Permittee:

Recently, we have received some much-needed moisture over the past several weeks, however, the drought situation and outlook for much of Idaho still remains severe to extreme. Long-range forecast indicates that the chances of recovering from drought in this coming year are very poor. Much of the snow pack will likely be adsorbed by the soil and will not make it to the ground water. Run-off affecting reservoirs, springs, and stream flows are expected to be at lower levels than previous years. There has been little snow pack at the mid to lower elevations which may reduce the number of water sources available for livestock, wild horse and wildlife use. According to the US Seasonal Drought Outlook, the outlook through April 2003 is for continued drought conditions except some possible improvement in the south central part of Idaho.

The Bureau of Land Management (BLM), Lower Snake River District (LSRD) is concerned about the possible effects of a drought year, given that we have only recently begun to recover from the effects of the prolonged drought of the late 1980's and early 1990's. It has been recognized that severe drought reduces plant vigor and food reserves in perennial plants, reducing root growth, plant production, and soil cover. Continuation of current conditions with the limited amounts of snowfall this year could limit the distribution and longevity of stock water, directly affecting scheduled grazing use for the 2003-grazing season. Without the average winter snowfall and spring precipitation, stock water may be limited and rangeland conditions might not promote adequate forage growth to sustain livestock grazing on public lands within your allotment(s).

It has been stated in Dr. John F. Valentine's book *Grazing Management* that "continued stocking at normal levels during moderate or severe drought is probably the greatest cause of range deterioration." Without proper management adjustments, drought could undermine the long-term health and productivity of the rangelands.

Depending on the timing and amount of future moisture (received prior to spring turnout), grazing management changes may possibly be necessary for the 2003 grazing season to address concerns with water shortages and reduced plant productivity. I would like to suggest that you begin to consider the possibility that continuation of current drought conditions may necessitate possible changes for the 2003 grazing season such as delayed turnouts, changes in season of use, temporary livestock reductions, or even rest of pastures or allotments.

We understand the hardships drought conditions create, and would like to help you find solutions to insure the long-term productivity of the public lands is protected. It is important that we begin now in planning for the 2003 grazing season and work together to find ways to lessen the hardships created by drought. I would recommend that permittees, who are planning to graze livestock this spring, begin to consider drought preparations and planning now. I suggest that you contact the BLM Rangeland Management Specialist who administers the allotment(s) you graze livestock on and make plans for an allotment visit prior to spring turnout. These field visits would allow you and your BLM Rangeland Management Specialist to assess impacts of drought and, if needed, start to prepare drought plans on the allotment(s) you graze livestock in for the 2003 grazing season.

I appreciate the effort many of you have made in previous drought years, and more recently, when many of you recognized the drought severity in your fall and winter range and took the initiative to make adjustments in your stocking rates, remove livestock before the end of your grazing periods, or taking non-use this past fall and winter within the allotment(s) you graze your livestock in.

I look forward to your continued cooperation involving drought management and the long-term health and productivity of your grazing allotment(s).

Sincerely,

RE: Jennaro Claims  
A65-17885 - 17890 and A65-17892 - 17933

All of the above claims are in stream stockwater use. (The one missing, A65-17891, is a domestic well.)

The first set, A65-17885 through 17890 are considered "in stream", however, I may have been in error when I accepted them. The diversion works say "pond". I have flagged them for field inspection.

A65-17892 through 17903 appear clear cut; diversion works state "in stream" with nothing else in the diversion works.

A65-17904 through A65-17933 should be looked at very closely. The claims initially came in on 11/23/88 with diversion works being tanks, pipes, etc. I spoke with Steve Bradbury, an attorney and suggested that they might consider applying the money to applications for permit since they had not been claimed in the Payette Adjudication. As a result of that conversation, I returned these 30 claims. He was given 30 days to decide. He ultimately returned them, rewritten as being instream. I told him they would be field checked, and the decision was to submit them anyway. They have been flagged for field exam.

Jan - this memo is for your info and to do with what you choose. I haven't made copies for any of the attached claims.

Helen
