To Whom It May Concern:

Subject: expansion of acreages on Ellsworth Angus Ranch (Leadore Farm).

The development of the farm at Leadore started in the early 1960s shortly after the purchase of the ranch, but the main expansion occurred at two different times. In 1979 we put in 8 wheel lines and a diesel pump. This system covered mostly the north side of the farm. In 1981 Ellsworth Angus Ranch and several neighbors went together and brought 3 phase power to the Leadore area. We then went to pumping with electricity and added four more wheel lines to the south side. Two years later 2 more wheels were added to complete the system and the expansion. This sprinkler system covered ground that was already developed and new ground.

Sincerely,

Mabelle Hays
