

Memorandum

Date: November 6, 2001

From: Craig L. Saxton

Subject: Meeting with Dwaine Anderson and discussion of historical water use.

Today I met with Dwaine, Todd, and Noel Anderson to discuss their claims. In the discussion I asked them how the property claimed under rights 29-00446B and 29-00446C were historically irrigated.

Dwaine stated that there were two ditches that irrigated the high points on the north and south side of Pocatello creek. In the 1950's only the ditch on the south side of the road was used. Water was diverted from what is now the Packers place and run along the south hills to a high field just South of the Anderson's current POU. Then the water was diverted and gravity feed into sprinkler lines that irrigated the POU claimed under 29-00446B and 29-00446C. A 1970³ aerial photo was provided showing the ditch on the South side of the creek. The ditch on the North side of the creek has been destroyed by the Pocatello creek road.

In the late 1970's, pumps were put in place to irrigate the fields.
