We have look over the files and have made some changes in our map, but the files on the west end are all gravel pits and have water rights and were irrigated in the past. If you want to see our 1961 arial photos these were all irrigated then and we need to claim them now because when the are done taking gravel out they will want to irrigate these lands again. Do you want use to send you the new files we have changed?

Randy

The acreage identified by Randy as gravel pits has been included in the total BID acres. However, I did not include in the count the Duck Creek and Spring Creek acres because the USGS quad shows very steep gradients for the acres BID wanted to include. Those acres appear to be unirrigable.

The total acreage of 47,643 is burley id pou.shp less that portion of bid ques ac.shp near duck cr and spring cr, less the MID overlap identified in 10S 24E 22 NWSW.
