MEMORANDUM

1/28
TO: Glen Saxton
FROM: Dave Tuthill *DNT*
DATE: February 26, 1985
RE: Review of Draft Bureau of Reclamation Filings for Expansion of
A and B Irrigation District

Pursuant to your request, the Water Allocation Section has reviewed the attached Draft Application for Permit and Application for Transfer, which were submitted to this office by the Bureau of Reclamation. Findings are as follows:

Application for Permit

- Item 3. Point of diversion should be shown as Government Lot 5 (SW $\frac{1}{4}$ SW $\frac{1}{4}$).
- Item 8B. Because the intended place of use is located within the boundaries of an irrigation district, the identification of exact acres to be irrigated is not required. However, some type of designation of place of use should be provided. For this type of filing, a map of the existing or proposed boundaries of the irrigation district is adequate.
- Item 8C. This item should refer to License No. 01-2060, which provides 240 cfs for the irrigation of 13,650 acres of land within a total irrigated area of 14,637 acres found at the time of the field exam, and Decree No. 01-0014, which decreed 267 cfs to be diverted at a point which is probably the same pumping plant although a different quarter-quarter is described. Based on a cursory view of the existing licensed and decreed rights, it appears that the licensed right has been included in the decreed right. However, the decree was signed on July 10, 1968 and the license was issued on January 14, 1971, so it is possible that the license is in some way additional to the decree. A complete analysis of this conflict is beyond the scope of this memorandum, but the existence of other water rights at the point of diversion should be identified in Item 8C.
