RE: Notice of Claim

Dear Ms. Scruggs & Mr. Stokes,

I am returning your recently received Notice of Claim for the following concerns and questions. Please mark on the map where your diversion is located and provide a written description of the "trench well" and how water is diverted. Do the cattle drink from the ponded water in the trench? Is the water piped?

The date of priority would be the date the trench was constructed and cattle began to drink from the developed source. Your claim indicates the trench was built on January 1, 1944 when the ground was likely frozen. This may be, however I am asking if this date can be corroborated with other information. If the water is diverted by pump the priority date would be the date the pump was installed.

Item 6 and Item 7 of the Notice appear to conflict and may be more flow than can be recommended. The number of head of cattle you claimed (50-100) consumes 600-1200 gallons of water per day and the upper limit of the type of claim you are filing is 13,000 gallons per day. If the system that the cattle utilizes is not pumped then a flow rate of 0.02 cfs would provide 13,000 gpd in one day. If the water is pumped or piped then the flow rate may be something else. Your description of the system, requested above, is important to address this concern. At any rate the values described in Items 6 & 7 need to be the same.

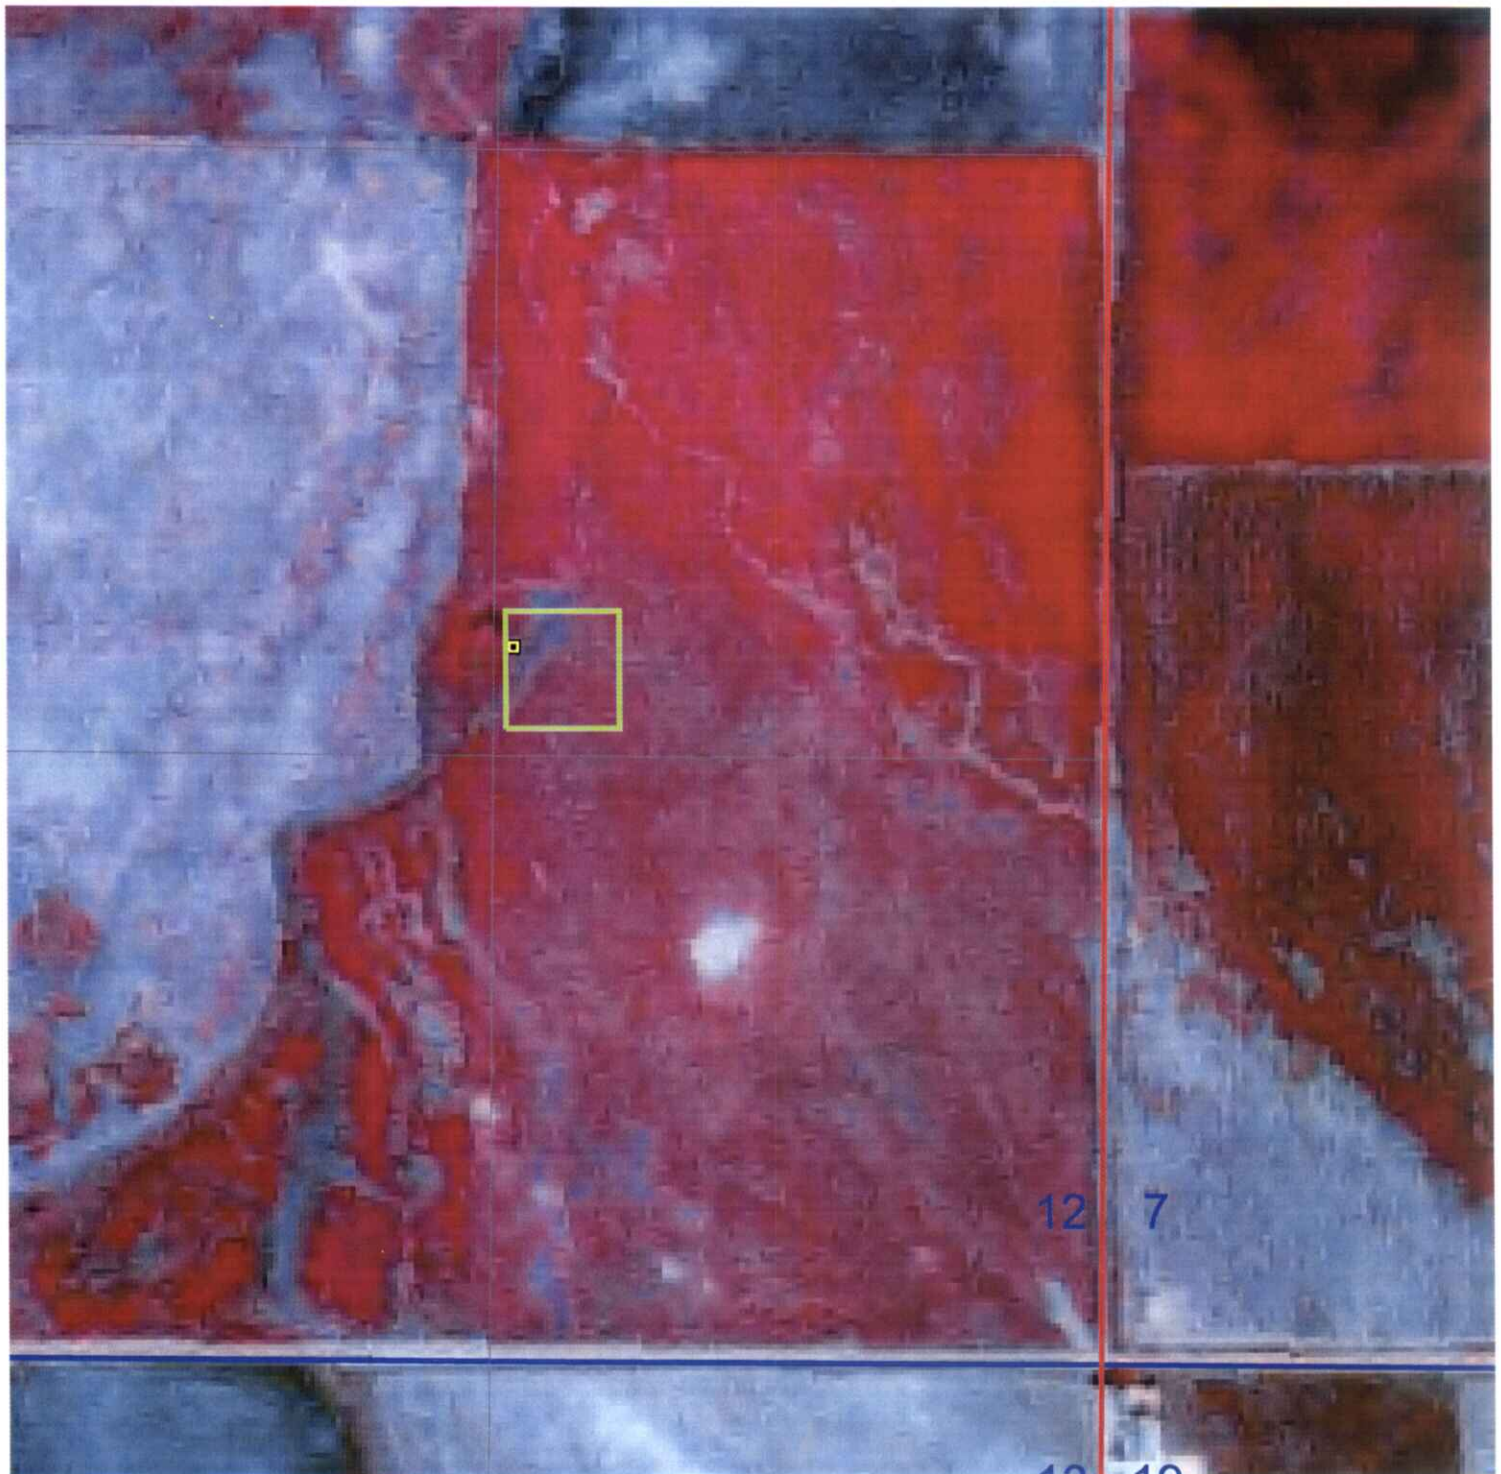

Item 10 describes that water from the trench is consumed in both 40 acre tracts of the E1/2 of SE1/4. Again, your description will assist me in verifying how to best recommend your claim.

Finally, return the corrected claim, map, system description and \$25 to this office. No fee was included in the initial mailing. Thank you and I look forward to hearing back from you.

Sincerely,

Douglas Jones, PE

Mr. Jones,

We are returning our application after further explaining what what's how we have developed the trench well. Also, this time we are including our check to cover filing fee; an oversight when we first sent our application
