On July 20, 1957, a 12 inch well was driven to a depth of 45 feet at the Cash Turner place 3 miles east of Cambridge, Idaho. Well driller Orval Harden estimated the flowing well would produce between 450 and 900 gallons of hot water (140 degrees) per minute. Other nearby hot springs continue to flow and invite the drilling of more hot water wells.

Industrial Possibilities

For industries expending large amounts for heating, drying, etc., these springs pouring forth scalding water since before the white man came to Idaho, offers industry a cheap source of heat and they are unobtagated as of Sept. 10, 1957.

Other Industrial Advantages

These springs are located only two miles from U. S. Highway 95 (colled), only a stones throw from the Union Pacific railroad tracks, a shorter distance yet from Weiser river where cold, clear water can be obtained and where sewage can be disposed of. Also available near the springs are hundreds of acres of flat farm land ideal for building sites. Lumber is plentiful in this area and an all-electric saw mill operates within a mile of the springs. Trees along the river also offer wonderful locations for camp grounds from where Cuddy, Hitt and Council mountains add much to the beauty of the scenery.

East Entrance To HELL'S CANYON

In addition to the above, Carn-bridge is the east entrance to the famed Hells Canyon where Idaho

Power company now has Brownlee and Obow hydroelectric projects under way, which is bringing hundreds of tourists daily to visit and where over 1200 men are employed Brownlee dam, just 29 miles west of Cambridge insures an abundance of cheap electric power by the summer of 1958.

Housing Badly Needed

One sad note in the picture is the housing problem. With dam and highways being built in this area, the hundreds of tourists passing through enroute to the dam Payette Lakes, Salmon River, the Selway and North Idaho, are forced to find accommodations elsewhere as our only motel and all housing is filled to capacity.

ANALYSIS OF HOT SPRING WATER

Temperature oC.	of 160	
Turbidity		ppm*
Saturation index		
Color		ppm
Odor		ppm
Total Solids	672	ppm

State Chemist Vaughn Anderson

Dated this January , 2006
Affidavit for beneficial use of water.

I Ruby Braun
Residing at 2816 Salubria Rd.
Cambridge, Idaho 83610,
telephone # (208) 257-3424
have personal knowledge of the beneficial use of the water right number 67-4027 Lakey Hot Springs. Having known Herbert M. and Ida E. Assel the owners of Lakey Hot Springs during the years 1958 through present.

During this entire time period I knew of their use of the hot springs water for household use including hot water for laundry, bathing and hot water heat in their home. I am also aware of their use of the spring hot water for use during slaughter time for scalding of hogs by themselves and neighbors within the local community.

To my knowledge the hot springs water has been used for beneficial uses for the entire time period 1959 through the present date.

Comments:

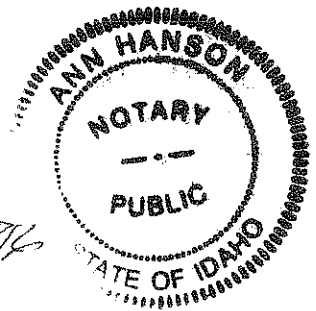

I knew the Assel when they owned the Hot Spring Ranch
& I also have known the owners since.

Comments:

I, William Don Lakey with the help of Mikea Plumbing in Bonanza, ID replaced the old hot water heating system in the old farm house on spring of 1966 which was corroded out from years of use.
