The water quantity for Water Right 27-7007C is in error. The pump and motor for this water right were installed in 1969. The "curve" for the pump is attached. The bowls are a three stage system. The system is designed to produce 2120 gallons per minute at 80 lbs pressure.

The bowls were serviced in 1987 and 2003, as evidenced by the two attached invoices. Each time the pressure was decreasing, presumably because of normal wear and tear on the bowls.

The pump feeds two circles, which irrigate 239.1 acres. At .02 cfs/acre, the system requires 4.78 cubic feet per second. 2120 gallons per minute is the equivalent of 4.9 cfs.

The current water right, as measured and determined by the Idaho Department of Water Resources, is clearly inconsistent with the capacity of the system and the historical use dating to 1969.

It is respectfully submitted the Idaho Department of Water Resources estimate using nozzle pressure of selected sprinklers and estimating the total volume by estimate was severely flawed, and totally inconsistent with the 37 year old system design and historical use. Claim is therefore made for 4.78 cfs for water right 27-7007C.
