SOURCE: BOISE RIVER

TRIBUTARY: SNAKE RIVER

QUANTITY: 0.100 CFS

This right shall receive 100 percent of its decreed quantity until the natural flow of the waters of the Boise River shall decrease so that all rights containing this condition cannot receive 100 percent of their decreed quantities, at which time this right and the other rights containing this condition shall first be cut to 75 percent of their decreed quantities, as the natural flow of the river decreases, beginning with the latest rights containing this condition and preceding to the earliest rights containing this condition in the order of their priority dates, and after all of the rights containing this condition shall have been reduced to 75 percent of their decreed quantities, should the natural flow of the waters of the river decrease below the amount necessary to supply 75 percent of those decreed quantities, then this right and the other rights containing this condition, beginning with the latest and preceding to the earliest, shall be reduced to 60 percent of their decreed quantities.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Figure 1. Schematic representation of the experimental design. The figure shows a timeline of the study. The timeline starts with a baseline period (BL) and is divided into three main phases: Pre-Test, Test, and Post-Test. The Pre-Test phase includes a familiarization session (F) and a pre-test session (P). The Test phase includes a test session (T) and a post-test session (PT). The Post-Test phase includes a post-test session (PT) and a follow-up session (FU). The timeline also indicates the duration of each session and the time intervals between sessions.
