Boise, Idaho 83724

C. CLAIMANT OF WATER RIGHT AS LISTED IN DIRECTOR'S REPORT

Name: Pleasant Valley Irr Co.
Address: P.O. Box 1583; Boise, Idaho 83701
Name: c/o Terry Copple, Esq.
Address: ;
Name: ;
Address: ;
Name: ;
Address: ;

D. I object to the following elements as recommended in the Director's Report. (Please check the appropriate box(es)).

1. ☐ **Name and Address**
Should be:
2. ☐ **Source**
Should be:
3. ☐ **Quantity**
Should be:
4. ☐ **Priority Date**
Should be:
5. ☐ **Point(s) of Diversion**
Should be:
6. ☐ **Instream Flow Description**
Should be:
7. ☐ **Purpose(s) of Use**
Should be:
8. ☐ **Period of Year**
Should be:
9. ☒ **Place of Use**
Should be: See attached.

11. **I object because:**

- ☐ This water right should not exist.
- ☐ This water right was not recommended, but should be recommended with the elements described above.

E. **REASONS SUPPORTING OBJECTION(S):**

The United States of America, through the Bureau of Land Management, is the owner of the land upon which use is claimed. The claimant's use of Federal land is unauthorized. See attached POU. Claimant's water right should not include this POU.

Sec 13: SE

1. The first step in the process of the development of a new product is the identification of a market need. This is often done through market research, which can be conducted in a number of ways, including surveys, focus groups, and interviews. The goal of market research is to gather information about the needs and preferences of potential customers.

2. Once a market need has been identified, the next step is to develop a product concept. This involves creating a detailed description of the product, including its features, benefits, and target market. The product concept is then used to create a business plan, which outlines the company's strategy for developing and marketing the product.

3. The third step in the process is to develop a prototype. This is a physical model of the product that is used to test the product concept and to gather feedback from potential customers. The prototype is typically made from a material that is easy to work with, such as wood or plastic, and is used to demonstrate the product's functionality and design.

4. Once a prototype has been developed, the next step is to conduct a pilot test. This involves selling the product to a small group of customers and gathering feedback on their experience. The pilot test is used to identify any problems with the product and to make improvements before the product is launched on a larger scale.

5. The final step in the process is to launch the product. This involves creating a marketing plan that outlines the company's strategy for promoting the product and reaching its target market. The marketing plan typically includes a budget, a timeline, and a list of marketing activities, such as advertising, public relations, and sales.

1

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

[illegible]

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

[illegible]

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem. Once the problem has been defined, the next step is to identify the stakeholders who are affected by the problem. This involves identifying the individuals, groups, and organizations that have an interest in the problem. The third step is to identify the resources that are available to address the problem. This involves identifying the people, money, and other resources that can be used to solve the problem. The fourth step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem. The fifth step is to implement the plan. This involves putting the plan into action. The sixth step is to evaluate the results. This involves assessing the effectiveness of the plan and making adjustments as needed. The seventh step is to communicate the results. This involves sharing the results of the process with the stakeholders. The eighth step is to monitor the results. This involves tracking the progress of the process and making adjustments as needed. The ninth step is to report the results. This involves providing a summary of the results to the stakeholders. The tenth step is to conclude the process. This involves ending the process and moving on to the next step.
