

State of _____)
) ss. SUPPLEMENTAL
 County of _____) AFFIDAVIT OF ROY R. MOORE, JR.
 (Pumping from Brownlee Reservoir)

I, Roy R. Moore, Jr., being first duly sworn, upon oath state that:

1. I am the General Partner of Rocking M Cattle Co., a limited partnership ("Rocking M").
2. Rocking M acquired the ranch land in Washington County, Idaho in about 1972. Currently, Rocking M owns an undivided 22.8% interest in the ranch property and Magness Racing Ventures, Inc. ("Magness") owns an undivided 77.2% interest.
3. This Affidavit supplements my Affidavit dated March 15, 2006 ("First Affidavit").
4. The diesel pump that was used at the Idaho Ranch, as described in the First Affidavit, was a Dempster as I recall. I believe it had a 90 horsepower pump. It burned 12 gallons per hour of diesel fuel and we kept it running day and night to cover the fields, except when we were haying. The pump ran about 120 to 140 days per year. The sprinkler system had about 260 heads.
5. The growing season at the Ranch is long, about 200 days. I remember the first summer we were there (1972, the summer before we bought the Ranch) we used the diesel pump to irrigate the 55 acres we called the hay meadow. This is the same acreage, for the most part, that was irrigated by water from the Dennett Creek ditch. We usually cut the first cutting of hay in early May and always got four cuttings. One time we did a small 5th cutting in October.
6. The second summer (1973) I replaced the diesel pump with the 30 hp electric pump that converts single phase to 3 phase inside the pump. The electric pump does about 1200 gallons per minute, but the diesel did more. The hay meadow fields have a 200 ft. rise in elevation so when the lines are high on the field there is not good pressure. When they are low on the fields there is a lot of pressure. The soil absorbs water as fast as it can be put on. The sprinkler heads are 6 gal per minute. The 30 hp electric pump runs 6 lines with about 195 to 200 sprinkler pipes.

7. The hayfield North of the two houses is 10 to 15 acres, in my opinion, and there is another small field South and West of the lower (westerly) house. There are 2 small pumps, hooked in tandem and 7.5 hp each, that are used there. These pumps were put in by Harold Woods before we operated the property. These smaller pumps still irrigate the fields North and Southwest of the oldest house. We run about 30 sprinklers on each field. We have 50 to 75 ft of lift so the pumps are pretty efficient on these fields.

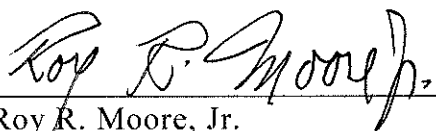

8. I previously thought, incorrectly, that the smaller pumps were about 10 hp each – they are 7.5 hp each, working in tandem. And they were installed (by Woods) in early 1971 to irrigate the North pastures. I recall that Woods planted hay in the North pastures in 1971. We irrigated the North pastures with these pumps in 1972 when we operated the property (prior to our purchase of the Ranch). To the extent my First Affidavit is inconsistent with these recollections, I correct my First Affidavit.

9. I always guessed that we were irrigating 70 to 75 acres total and there are maybe 10 to 20 more acres that could be covered. We tried to extend the Dennett Creek ditch to get the water to the upper level of the hay meadow more effectively. That extension has not been completed.

10. This was 34 years ago and I hope I have it all remembered correctly. I have reviewed this statement and have made all changes and corrections that I feel are necessary. This statement accurately reflects my knowledge about the Ranch, use of water from Brownlee Reservoir, and the pumps. I understand that I am signing this affidavit under oath before a notary public. I swear under penalty of perjury that this statement is true and correct to the best of my knowledge and belief.

FURTHER THE AFFIANT SAYETH NAUGHT.

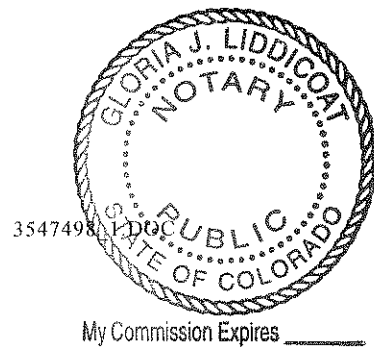

Date: April __, 2006

Roy R. Moore, Jr.

Subscribed and sworn to before me this 1st day of May,
2006.
