Commissioner, Bureau of Indian Affairs
Washington 25, D. C.
Attention: Land Operations, Irrigation

Sir:

Reference is made to your letter of May 27, 1963, to Senator Frank Church, regarding the complaint of Emory Poulson of Blackfoot, Idaho.

Water rights in this area have been the subject of controversy for some time, and it would be well to review for you some of its history.

Sand Creek is mostly a high water and waste water channel originating south and east of Idaho Falls. Part of the high water from Willow Creek empties into Sand Creek, and a number of canal companies whose canals divert from Snake River use the Sand Creek channel as an overflow, or by-pass for waste water. The original Sand Creek channel crossed the Reservation Canal south of Firth, Idaho and continued southwest into Blackfoot River just east of the city of Blackfoot. (See attached sketch for layout).

Use of the Sand Creek channel as a wasteway increased as use of irrigation water on new farms adjacent to it increased. Finally, the channel capacity was exceeded to the extent that farmland along the lower section of Sand Creek was being flooded and damaged. Damage suits were pending when a plan was proposed to commingle Sand Creek water with Reservation Canal water. This would carry the Sand Creek water to Blackfoot River about nine miles upstream from its original point of confluence with the river and relieve farmland and private canals from flooding action from Sand Creek water.

In 1926 the Government approved contracts with five canal companies to enlarge the Reservation Canal from its crossing with Sand Creek to the Blackfoot River for the purpose of carrying excess water of Sand Creek. This agreement has worked satisfactorily, except in

connection with certain appropriators whose lands lie below the point of commingling. Two of these appropriators, Mr. Wernette and Mr. Poulson, claim more water than appears legal under State law. We note that in Mr. Poulson's letter to Senator Church, he says that he bought 320 acres of land with a 480-inch water right. Water rights in Idaho are legally restricted to one inch to the acre, there being 50 miners' inches to the cubic foot per second.

The only Sand Creek right recognized by the State of Idaho below our Reservation Canal is that in State License No. 4591 for 2.44 cu. ft. per second. One cu. ft. per second for this right is for Mr. Wernette, and 1.44 cu. ft. per second is for Mr. Poulson. These individuals, however, claim they can establish appropriator's rights for about 18 cu. ft. per second. We doubt that this can be done and we have informed Mr. Holden, their attorney, that we would not recognize these extra water rights until they had been adjudicated by a proper court.

The reason for the original six foot gate was to pass the entire Sand Creek waters. This was before the enlargement contracts were entered into with the upstream canal companies. After the Reservation Canal was enlarged to carry the Sand Creek waters, we did not replace the large gates and there were several instances where the down creek waterusers opened these large gates, taking from the Idaho Canal as much as 30 cu. ft. per second, and this at a time when Sand Creek itself was dry. This means that the water being taken belonged to the Fort Hall Project Snake River supply. In order to prevent this situation from reoccurring, we suggested to the Fort Hall Superintendent that he restrict the flow turned down Sand Creek to the amount to which beneficial use had been made and lock the headgate and post proper notice. It was at this time that the six foot gate was replaced with an 18" gate. It should be noted that the 18" gate will supply far more water than the 2.44 cu. ft. per second as under a 4 ft. head it will deliver approximately 18 cu. ft. per second. It should also be noted that when Sand Creek is dry, the users below our Canal should also be dry. Actually, however, water continues to be taken through the 18" gate to their land from our Reservation Canal supply. We have allowed this because the rapid fluctuation of Sand Creek makes control difficult. These waterusers, in 1961, were placed by the State under the jurisdiction of the State appointed Watermaster of Idaho, District No. 34. This was done with sanction

of the Idaho Reclamation Engineer and the Board of Directors of District No. 34, and it would be for this service that Mr. Poulson is being taxed. It should also be noted that if Mr. Poulson believes he is short of water, he should contact the Watermaster of District No. 34 for relief and if the Watermaster felt we were not releasing the proper amount of water, he would contact our Project Engineer regarding this situation. To date, we have not received a complaint from this Watermaster regarding the amount of water being released through the 18" gate.

As a matter of history, we should also note that in 1928, the Government made a filing of the water of Sand Creek for 300 cu. ft. per second. Proof of beneficial use was duly completed and a State Certificate issued, and we believe that the Government filing has priority over the most recent filings of Mr. Poulson and Mr. Wernette, even though they are attempting to revive older filings which have for all practical purposes, lapsed.

It would appear that if Mr. Poulson and Mr. Wernette are serious regarding the establishment of a claim for additional water it will be necessary to go through an adjudication for the purpose of establishing these water rights.

Because of the use of Sand Creek as a wasteway, it is subject to extreme fluctuation of flows going from flood stage to dry stage and back again to flood stage within a period of a few days.

We have discussed this situation with Mr. Poulson and one of his complaints is that he is not able to get early Sand Creek water before our canal comes on. We can remedy this situation by raising the lip on our structure and have told him we will do so this coming winter.

Sincerely yours,

(Sgd) R. D. HOLDE
